1912.

P R E F A C E.

THE present volume, which brings the Catalogue of Birds' Eggs to a conclusion, has been retarded in its preparation by more than one cause. The principal reason for the delay in its appearance has been the large amount of additional work which was thrown on Mr. W. R. Ogilvie-Grant, the author, by the death of Dr. R. Bowdler Sharpe at the end of 1909. The administration of the Bird Room, the incorporation of large collections and the re-arrangement of the material already in hand, the planning of new Expeditions and the conduct of the voluminous correspondence involved by these fresh departures, added to the duty of dealing with the ceaseless stream of enquirers who visit or write to the Bird Room, might in themselves have been sufficient to have filled up all the available time. Mr. Ogilvie-Grant has done his work under considerable difficulties, and the delay has been unavoidable.

SIDNEY F. HARMER,
Keeper of Zoology.

British Museum (Natural History),
London,
September 13, 1912.

AUTHOR'S PREFACE.

IN one or two instances only does the nomenclature used in the present volume differ from that followed in the fifth volume of the 'Hand-list of the Genera and Species of Birds.' The delay in the publication of the latter work greatly retarded the present volume of the Catalogue of Birds' Eggs which was commenced in 1906, the year in which the late Dr. Sharpe hoped to complete his Hand-list. Thus it happened that in the first sheets of the present work ("B-K") which were printed concurrently with the Hand-list, the date of that work is wrongly referred to as 1906; likewise in sheets "L-N" and "P" it is again wrongly quoted as 1908. Dr. Sharpe, at that time in failing health, was unable to complete the work as quickly as he had anticipated and it was not until 1909, shortly before his death, that the fifth volume of the Hand-list was actually published. Since that time the extra amount of official duties which have fallen to my share has rendered the completion of the present volume a slow and somewhat difficult matter.

During the progress of this volume through the press several important collections of eggs have been added to the Museum series, the principal of these being the large and very valuable Palearctic collection presented by Mr. W. Radcliffe Saunders and the South American collection presented by Mr. Ernest Gibson, while many smaller but valuable series from the Andaman Islands, various parts of Africa, Australia, etc., have been acquired by purchase or exchange.

The MS. for this volume was commenced years ago by the late Mr. E. W. Oates, but was never completed, and the great additions

to the collection of eggs, as well as the recognition in the Hand-list of many more species and sub-species, has made it necessary to rewrite almost the whole volume.

The total number of species dealt with in the present volume is 1117, and the number of eggs catalogued 19,283, as shown in the following table :—

Family.	No. of species.	No. of specimens of eggs.
Zosteropidæ	20	186
Dicæidæ	17	103
Nectariniidæ	48	281
Meliphagidæ	70	546
Mniotiltidæ	38	333
Motacillidæ	59	2292
Alaudidæ	85	1278
Fringillidæ	297	6296
Cœrebidæ	13	48
Tanagridæ	47	174
Ploceidæ	130	2093
Icteridæ	73	1074
Sturnidæ	33	888
Eulabetidæ	23	183
Oriolidæ	14	242
Dicruridæ	18	505
Paradiseidæ	15	24
Corvidæ	110	2704
Streperidæ	7	28
Total	<u>1117</u>	<u>19,283</u>

W. R. OGILVIE-GRANT.

CATALOGUE
OF
BIRDS' EGGS.

VOL. V.

Order PASSERIFORMES (*continued*).

(*Cf.* Vol. iii. p. 165.)

Sub-Order ACROMYODI (*continued*).

(*Cf.* Vol. iii. p. 229.)

PASSERES NORMALES (*continued*).

(*Cf.* Vol. iii. p. 229.)

Family ZOSTEROPIDÆ.

Genus ZOSTEROPS, *Vig. & Horsf.*

As a rule eggs of the White-eyes resemble each other closely in size, shape, and colour. They are of a pointed oval shape, exhibit very little gloss, and are of a pale blue or bluish-green colour, without markings. The tint is variable not only among eggs of the same species, but even among those of the same clutch. In some clutches all the eggs are white.

Zosterops japonica, *Temm. & Schl.*

Zosterops japonica, *Sharpe*, *Cat. Birds B. M.* ix. p. 160 (1884); *Seeböhm*, *B. Japan. Emp.* p. 68 (1890); *Nehrk. Kat. Eiersamml.* p. 78 (1899); *Finsch*, *Das Tierreich*, *Zosterop.* p. 11 (1901); *Dresser*, *Man. Pal. Birds*, pt. i. p. 221 (1902); *Sharpe*, *Hand-l. v.* p. 1 (1906).
Zosterops palpebrosus japonicus, *Hartert*, *Vög. Pal. Faun.* pt. iii. p. 315 (1905).

The eggs of the Japanese White-eye measure from ·67 to ·7 in length, and from ·5 to ·53 in breadth.

4. Fujiyama, Hondo, Japan, 11th July. W. Radcliffe Saunders, Esq.
[P.].
5. Subashiri, Fujiyama, 5th July. W. Radcliffe Saunders, Esq.
[P.].

Zosterops gouldi, Bonap.

Zosterops chloronotus, Thien. *Fortpflanz. ges. Vög.* tab. xxiii. fig. 14 (1845-54).

Zosterops gouldi, Gould, *Handb. Birds Austr.* i. p. 588 (1865); Sharpe, *Cat. Birds B. M.* ix. p. 162 (1884); North, *Nests & Eggs Austr. Birds*, p. 350 (1889); Nehr. *Kat. Eiersamml.* p. 80 (1899); Campbell, *Nests & Eggs Austr. Birds*, i. p. 350 (1901); Finsch, *Das Tierreich, Zosterop.* p. 12 (1901); Sharpe, *Hand-l.* v. p. 2 (1906).

Eggs of the Australian Green-backed White-eye measure from ·62 to ·7 in length, and from ·48 to ·5 in breadth.

4. West Australia. Gould Coll.
1. West Australia. Gould Coll.
2. West Australia. Gould Coll.
2. West Australia, 4th November (A. J. Campbell). Crowley Bequest.
2. Australia, 27th December. Crowley Bequest.
3. Australia. Carter Coll.

Zosterops sundevalli, Hartl.

Zosterops pallida, Sharpe (*nec Swains.*), *Cat. Birds B. M.* ix. p. 160 (1884); Shelley, *Birds Afr.* ii. p. 187 (1900); Finsch, *Das Tierreich, Zosterop.* p. 50 (1901).

Zosterops sundevalli, Sharpe, *Hand-l.* v. p. 2 (1906).

Eggs of Burchell's White-eye measure from ·65 to ·66 in length, and from ·44 to ·46 in breadth.

3. 14 Streams, Vaal River, November. R. B. Woosnam, Esq. [C.].

Zosterops xanthochroa, Gray.

Zosterops xanthochroa, Layard, *Ibis*, 1878, p. 259; Sharpe, *Cat. Birds B. M.* ix. p. 174 (1884); Nehr. *Kat. Eiersamml.* p. 80 (1899); Finsch, *Das Tierreich, Zosterop.* p. 13 (1901); Sharpe, *Hand-l.* v. p. 2 (1906).

Two eggs of the New Caledonian White-eye measure respectively 7 by ·5 and ·68 by ·5.

2. New Caledonia (E. L. Layard: Tristram Coll.). Crowley Bequest.

Zosterops ceylonensis, Holdsw.

Zosterops ceylonensis, Legge, *B. Ceylon*, p. 585 (1879); Sharpe, *Cat. Birds B. M.* ix. p. 173 (1884); Finsch, *Das Tierreich, Zosterop.* p. 13 (1901); Sharpe, *Hand-l.* v. p. 2 (1906).

Three eggs of the Ceylon White-eye measure $\cdot 6$ by $\cdot 47$.

3. Ceylon, 12th August.

E. C. Stuart Baker, Esq. [C.].

Zosterops annulosa, Swains.

Zosterops capensis, Sundev.; Sharpe, *Cat. Birds B. M.* ix. p. 171 (1884); Kuschel, *J. f. O.* 1895, p. 345; Nehrck. *Kat. Eiersamml.* p. 80 (1899).
Zosterops annulosa, Finsch, *Das Tierreich, Zosterop.* p. 14 (1901); Sharpe, *Hand-l.* v. p. 2 (1906).

Seven eggs of the Cape White-eye measure from $\cdot 67$ to $\cdot 69$ in length, and from $\cdot 51$ to $\cdot 53$ in breadth.

1. South Africa (*E. L. Layard*).
2. Grahamstown, South Africa.

Crowley Bequest.

W. Radcliffe Saunders, Esq.
[P.].

1. Durban, Natal, 20th October.
2. Durban, 24th December.
1. Durban, 1st February.

Major R. Sparrow [E.].
 Major R. Sparrow [E.].
 Major R. Sparrow [E.].

Zosterops madagascariensis (Gmel.).

Zosterops madagascariensis, Milne-Edwards & Grandidier, *Hist. Nat. Madag., Ois.* i. p. 291, pl. 302. fig. 15 (1879); Cowan, *Proc. R. Phys. Soc. Edinb.* vii. p. 148 (1882); Sharpe, *Cat. Birds B. M.* ix. p. 170 (1884); Nehrck. *Kat. Eiersamml.* p. 80 (1899); Sharpe, *Hand-l.* v. p. 3 (1906).

Zosterops maderaspatana, Finsch, *Das Tierreich, Zosterop.* p. 15 (1901).

Six eggs of the Madagascar White-eye measure from $\cdot 63$ to $\cdot 69$ in length, and from $\cdot 49$ to $\cdot 5$ in breadth.

The six eggs in the Crowley Collection, purchased from Jamrach and said to have come from Madagascar, have been referred to the present bird. They appear, however, to belong to a different species, for they measure from $\cdot 71$ to $\cdot 76$ in length, and from $\cdot 54$ to $\cdot 55$ in breadth. Nehrckorn gives the measurements as $\cdot 64 \times \cdot 5$ ($16 \times 12\cdot 5$ mm.).

4. Betsileo, Madagascar.
2. Ilaka, S.E. Madagascar, 16th Nov.

Rev. W. Deans Cowan [P.].

Crowley Bequest.

(*W. Deans Cowan: Tristram Coll.*).

6. [Madagascar.]

Crowley Bequest.

Zosterops palpebrosa (Temm.).

Zosterops palpebrosa, Legge, *B. Ceylon*, p. 582 (1879); Sharpe, *Cat. Birds B. M.* ix. p. 165 (1884); Oates, *Fauna Brit. Ind., Birds*, i. p. 214 (1889); *id.*, ed. Hume, *Nests & Eggs Ind. Birds*, i. p. 140 (1889); Nehrck. *Kat. Eiersamml.* p. 165 (1899); Barnes, *Journ. Bomb. Nat. Hist. Soc.* v. p. 97, pl. (1890); Finsch, *Das Tierreich, Zosterop.* p. 17 (1901); Sharpe, *Hand-l.* v. p. 4 (1906).

The eggs of the Indian White-eye measure from .51 to .7 in length, and from .4 to .49 in breadth.

Family DICÆIDÆ.

Genus DICÆUM, Cuv.

Dicæum cruentatum (Linn.).

Dicæum cruentatum, *Sharpe, Cat. Birds B. M.* x. p. 15 (1885); *Nehrk. Kat. Eiersamml.* p. 84 (1899); *Oates, Fauna Brit. Ind., Birds*, ii. p. 376 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 270 (1890); *Sharpe, Hand-l.* v. p. 21 (1906).

Eggs of the Scarlet-backed Flower-pecker are of a pointed oval shape, plain white and without any gloss. They vary from .55 to .58 in length, and from .38 to .42 in breadth.

1. Dibrugarh, Assam, 24th May (*J. R. Hume* Coll.
Cripps).
2. Pegu, 1st April (*E. W. Oates*). Oates Coll.
2. Pegu, 9th April (*E. W. O.*). Oates Coll.
1. Pegu, 28th March (*E. W. O.*). Crowley Bequest.

Dicæum nigrimentum, *Salvad.*

Dicæum nigrimentum, *Sharpe*, *Cat. Birds B. M.* x. p. 17 (1885); *id.*, *Hand-l.* v. p. 21 (1906).

Three eggs of the Black-chinned Flower-pecker are uniform white and of an elongate oval form. They measure from .53 to .58 in length, and from .39 to .4 in breadth.

3. Singapore, 10th March (*J. Whitehead* - Crowley Bequest.
head).

Dicæum hirundinaceum (*Shaw*).

Dicæum hirundinaceum, *Gould*, *Handb. Birds Austr.* i. p. 581 (1865); *Sharpe*, *Cat. Birds B. M.* x. p. 19 (1885); *North*, *Nests & Eggs Austr. Birds*, p. 236 (1889); *Campbell*, *Nests & Eggs Austr. Birds*, i. p. 437 (1901); *Sharpe*, *Hand-l.* v. p. 22 (1906).

The eggs of the Swallow Flower-pecker are of an elongate oval form, slightly glossy and plain white. They measure from .64 to .7 in length, and from .43 to .5 in breadth.

6. New South Wales. Gould Coll.
3. South Australia (*G. F. Angas*). Gould Coll.
1. Victoria. Govt. of Victoria [P.].

Dicæum hæmatostictum, *Sharpe*.

Dicæum hæmatostictum, *Sharpe*, *Cat. Birds B. M.* x. p. 35 (1885); *Ogilvie-Grant & Whitehead*, *Ibis*, 1896, p. 553; 1898, p. 243, pl. vi. fig. 2; *Sharpe*, *Hand-l.* v. p. 25 (1906).

An egg of the Blood-breasted Flower-pecker is of a regular oval shape, without any gloss. It is pale greenish-white, spotted and blotched with pale olive-brown and clouded with lilac-grey. The markings are chiefly confined to the larger end of the egg. It measures .65 by .49.

1. Canloan Volcano, Central Negros, J. Whitehead, Esq. [C.].
Philippine Islands, 19th March.

Dicæum trigonostigma (*Scop.*).

Dicæum trigonostigma, *Sharpe*, *P. Z. S.* 1879, p. 343; *id.*, *Cat. Birds B. M.* x. p. 38 (1885); *Nehrke*, *Kat. Eiersamml.* p. 84 (1899); *Sharpe*, *Hand-l.* v. p. 26 (1906).

An egg of the Orange-bellied Flower-pecker sent by Sir Hugh Low is of a pointed oval shape and devoid of gloss. It is pale greenish-white, rather thickly speckled and spotted, especially at the broad end, with umber-brown and dull purplish-grey. It measures .62 by .42.

1. Labuan Island, Borneo.

Sir Hugh Low [C.].

Dicæum cinereigulare, Tweedl.

(Plate I. fig. 2.)

Dicæum cinereigulare, Sharpe, *Cat. Birds B. M.* x. p. 40 (1885); Ogilvie-Grant & Whitehead, *Ibis*, 1898, p. 243; *Nchrk. Kat. Eiersamml.* p. 84 (1899); Sharpe, *Hand-l.* v. p. 27 (1906).

The eggs of the Grey-throated Flower-pecker are of a pointed oval shape, slightly glossy and plain white. They measure from .59 to .62 in length, and from .42 to .45 in breadth.

2. Samar, Philippine Islands, July.

J. Whitehead, Esq. [C.].

2. Samar, July.

J. Whitehead, Esq. [C.].

2. Samar, July.

J. Whitehead, Esq. [C.].

1. Samar, July.

J. Whitehead, Esq. [C.].

Dicæum chrysorrhæum, Temm.

Dicæum chrysorrhæum, Sharpe, *Cat. Birds B. M.* x. p. 44 (1885); Oates, *Fauna Brit. Ind., Birds*, ii. p. 378 (1890); Baker, *Ibis*, 1896, p. 348; Sharpe, *Hand-l.* v. p. 27 (1906).

Eggs of the Yellow-vented Flower-pecker are of a long oval shape, and dull white, devoid of gloss. They measure .6 in length, and from .41 to .42 in breadth.

2. Margherita, Assam, 15th June.

E. C. Stuart Baker, Esq. [C.].

Dicæum concolor, Jerdon.

Dicæum concolor, Sharpe, *Cat. Birds B. M.* x. p. 45 (1885); Oates, *Fauna Brit. Ind., Birds*, ii. p. 379 (1890); *id.*, ed. Hume, *Nests & Eggs Ind. Birds*, ii. p. 272 (1890); Sharpe, *Hand-l.* v. p. 28 (1906).

The eggs of the Nilghiri Flower-pecker are elongate ovals, entirely devoid of gloss, and plain white. The average measurement of four examples is .64 by .43.

1. Nilghiri Hills, S. India, 19th Jan.

Hume Coll.

2. Nilghiri Hills, April.

Hume Coll.

1. Nilghiri Hills, May.

Hume Coll.

Dicæum olivaceum, Walden.

Dicæum inornatum, Sharpe, *Cat. Birds B. M.* x. p. 45 (1885).

Dicæum olivaceum, Oates, *Fauna Brit. Ind., Birds*, ii. p. 380 (1890); Baker, *Ibis*, 1896, p. 349; Sharpe, *Hand-l.* v. p. 28 (1906).

Three eggs of the Plain-coloured Flower-pecker are of a rather broad oval shape, pure white, and devoid of gloss. They measure from .52 to .58 in length, and from .42 to .46 in breadth.

1. Margherita, Assam, 15th May. E. C. Stuart Baker, Esq. [C.].
2. Margherita, 15th August. E. C. Stuart Baker, Esq. [C.].

Dicaëum erythrorhynchum (Lath.).

Dicaëum minimum, Tick.; *Legge, Birds Ceylon*, p. 574 (1879).

Dicaëum erythrorhynchum, *Sharpe, Cat. Birds B. M.* x. p. 48 (1885); *Barnes, Journ. Bomb. Nat. Hist. Soc.* iv. p. 86 (1889); v. pl. (1890); *Oates, Fauna Brit. Ind., Birds*, ii. p. 381 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 274 (1890); *Nehrk. Kat. Eiersamml.* p. 84 (1899); *Sharpe, Hand-l.* v. p. 28 (1906).

Eggs of Tickell's Flower-pecker are of a somewhat narrow oval shape, and plain white, without gloss. They measure from .57 to .61 in length, and from .4 to .41 in breadth.

2. Sitapur, Oudh, 12th March (C. R. Cock). Hume Coll.
3. Maunbhum, Bengal, February (R. C. Beavan: Tristram Coll.). Crowley Bequest.

Genus *PARDALOTUS*, Vieill.

Pardalotus ornatus, Temm.

(Plate I. fig. 3.)

Pardalotus striatus, Temm.; *Gould, Handb. Birds Austr.* i. p. 161 (1865).

Pardalotus ornatus, *Sharpe, Cat. Birds B. M.* x. p. 55 (1885); *North, Nests & Eggs Austr. Birds*, p. 384 (1889); *Nehrk. Kat. Eiersamml.* p. 84 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 440 (1901); *Sharpe, Hand-l.* v. p. 29 (1906).

The eggs of the Striated Diamond-bird vary from a narrow to a broad oval or spherical shape, and exhibit a small amount of gloss. They are plain white, and measure from .7 to .75 in length, and from .5 to .6 in breadth.

1. New South Wales (Wilson). Gould Coll.
2. Wimmera District, Victoria, 5th September (A. J. North). Crowley Bequest.
3. South Australia (G. F. Angas). Gould Coll.
2. South Australia. Gould Coll.

Pardalotus affinis, Gould.

Pardalotus affinis, *Gould, Handb. Birds Austr.* i. p. 163 (1865); *Sharpe, Cat. Birds B. M.* x. p. 57 (1885); *North, Nests & Eggs Austr. Birds*, p. 51 (1889); *Nehrk. Kat. Eiersamml.* p. 84 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 443 (1901); *Sharpe, Hand-l.* v. p. 29 (1906).

Four eggs of the Yellow-tipped Diamond-bird are of a broad oval

shape, pure white, and very slightly glossed. They measure from .72 to .75 in length, and from .53 to .56 in breadth.

Genus **NECTARINIA**, *Illiger.*

Nectarinia famosa (*Linn.*).

(Plate I. fig. 17.)

Nectarinia famosa, *Shelley, Monogr. Nect.* p. 13 (1876-80); *Sharpe, ed. Layard's Birds S. Africa*, p. 306 (1875-84); *Gadow, Cat. Birds B. M.* ix. p. 5 (1884); *Kuschel, J. f. O.* 1895, p. 346; *Nehrke, Kat. Eiersamm.* p. 75 (1899); *Stark, Faun. S. Afr., Birds*, i. p. 276 (1900); *Shelley, Birds Afr.* ii. p. 19 (1900); *Sharpe, Hand-l.* v. p. 35 (1906).

The eggs of the Malachite Sun-bird are of an oval shape and moderately glossy. They are greyish-brown, blotched all over with dark brown or olive-brown. In some examples, however, the markings are very fine and indistinct, and not much darker than the ground-colour of the egg. They measure $\cdot 71$ to $\cdot 76$ in length, by $\cdot 5$ to $\cdot 52$ in breadth.

Genus **CHALCOSTETHA**, Cab.**Chalcostetha pectoralis** (Temm.).

Nectarinia pectoralis, Schleg. & Müll. *Verhand. Zool., Aves*, p. 57, pl. 9. fig. (1846).

Chalcostetha insignis, Shelley, *Monogr. Nect.* p. 87 (1876-80); Gadow, *Cat. Birds B. M.* ix. p. 12 (1884).

Chalcostetha pectoralis, Oates, *Fauna Brit. Ind., Birds*, ii. p. 345 (1890); Sharpe, *Hand-l.* v. p. 37 (1906).

The eggs of Maklot's Sun-bird are of a long oval shape, with scarcely any gloss. In four specimens the ground-colour is whitish, thickly mottled and spotted all over with umber-brown, some of the spots being rounded and more intense in colour. In another specimen the ground-colour is greenish-white, blotched towards the larger end with purplish-grey and with scattered spots and small blotches of deep brown. They measure from .59 to .62 in length, and from .42 to .43 in breadth.

4. Sandakan, N. Borneo (*W. B. Pryor*: Crowley Bequest. *Tristram Coll.*).

1. Labuan Island, Borneo. Crowley Bequest.

Genus **ÆTHOPYGA**, Cab.**Æthopyga vigorsi** (Sykes).

(Plate I. fig. 10.)

Æthopyga vigorsi, Shelley, *Monogr. Nect.* p. 71 (1876-80); Gadow, *Cat. Birds B. M.* ix. p. 18 (1884); Oates, *Fauna Brit. Ind., Birds*, ii. p. 350 (1890); *id.*, ed. Hume, *Nests & Eggs Ind. Birds*, ii. p. 250 (1890); Sharpe, *Hand-l.* v. p. 38 (1906).

An egg of Vigors's Yellow-backed Sun-bird is of a regular oval shape and without gloss. It is yellowish-buff, very densely mottled with yellowish-brown. At the broad end there is a fine black hair-line, extending over a third of the circumference of the egg. This example measures .64 by .5.

1. Bhor Ghâts, Western India Hume Coll. (*H. Wenden*).

Æthopyga seheriæ (Tick.).

(Plate I. fig. 12.)

Æthopyga seheriæ, Shelley, *Monogr. Nect.* p. 67 (1876-80); Gadow, *Cat. Birds B. M.* ix. p. 18 (1884); Oates, *Fauna Brit. Ind., Birds*, ii. p. 348 (1890); *id.*, ed. Hume, *Nests & Eggs Ind. Birds*, ii. p. 249 (1890); Sharpe, *Hand-l.* v. p. 38 (1906).

The eggs of the Himalayan Yellow-backed Sun-bird are of a pointed oval form and devoid of gloss. They are white, speckled with pale chocolate-brown and purplish-grey. The markings,

which are small and well-defined, are more frequent at the broad end of the egg than elsewhere, but do not form a conspicuous cap. Four examples measure respectively: .55 by .47; .57 by .43; .59 by .44; .6 by .46.

1. Mongphoo, Darjiling, 2nd Aug. Hume Coll.
(*J. Gamble*).
3. Sikhim Terai, 9th May (*O. Möller*). Hume Coll.

Æthopyga siparaja (*Raffl.*).

(Plate I. fig. 7.)

Æthopyga siparaja, *Shelley, Monogr. Nect.* p. 57 (1876-80); *Sharpe, P. Z. S.* 1879, p. 342; *Gadow, Cat. Birds B. M.* ix. p. 21 (1884); *Sharpe, Ibis*, 1889, p. 422; *id.*, *Hand-l.* v. p. 38 (1906).

The eggs of the Malayan Yellow-backed Sun-bird are of a broad oval form and without gloss. The ground-colour varies from pinkish-white to pale salmon-pink, and the markings are of two types. In one, which appears to be the commoner, the egg is marked with large clouds of a darker pink than the ground-colour, and is also spotted and otherwise marked with rich purplish-red and chocolate-brown. In the other, the egg is densely streaked and mottled with rich chestnut, and has no other markings except a few specks of deep purplish-red, almost black in intensity. Specimens measure from .52 to .6 in length, and from .4 to .43 in breadth.

8. Labuan Island, Borneo. Sir Hugh Low [C].
1. Borneo (*H. Low: Tristram Coll.*). Crowley Bequest.
2. Mt. Kina Balu, 30th April (*J. Whitehead*). Crowley Bequest.

Æthopyga magnifica, *Sharpe*.

Æthopyga magnifica, *Shelley, Monogr. Nect.* p. 51 (1876-80); *Gadow, Cat. Birds B. M.* ix. p. 24 (1884); *Steere, List Birds & Mamm. Philipp.* p. 22 (1890); *Ogilvie-Grant & Whitehead, Ibis*, 1896, p. 550; 1898, p. 241, pl. v. figs. 5 & 6; *Sharpe, Hand-l.* v. p. 38 (1906).

The eggs of the Black-bellied Yellow-backed Sun-bird are of a somewhat lengthened oval shape and devoid of all gloss. They are pale pink, mottled with chestnut, the markings being extremely dense at the broad end and forming a zone or cap at that part. In one or two specimens a few very fine hair-like lines may be noticed at the broad end.

One example differs from the above, and resembles the eggs of *Æ. siparaja* of the first or commoner type.

Two examples measure respectively: .65 by .5; .68 by .48.

2. Negros, Philippine Islands, Feb. Steere Exped.
2. Canloan Volcano, Negros, 23rd March. J. Whitehead, Esq. [C].
1. Canloan Volcano, 15th April. J. Whitehead, Esq. [C].

Æthopyga ignicauda (Hodgs.).

Æthopyga ignicauda, *Shelley, Monogr. Nect.* p. 45 (1876-80); *Gadow, Cat. Birds B. M.* ix. p. 25 (1884); *Oates, Fauna Brit. Ind., Birds*, ii. p. 351 (1890); *Sharpe, Hand-l.* v. p. 39 (1906).

Two eggs of the Fire-tailed Yellow-backed Sun-bird are of an elongate oval shape and devoid of gloss. The ground-colour is white, finely spotted and mottled all over with light reddish-brown. They measure respectively .75 by .49 and .73 by .49.

2. Darjiling, 27th May.

B. B. Osmaston, Esq. [P.].

Æthopyga gouldiæ (Vig.).

Æthopyga gouldiæ, *Shelley, Monogr. Nect.* p. 41 (1876-80); *Gadow, Cat. Birds B. M.* ix. p. 27 (1884); *Oates, Fauna Brit. Ind., Birds*, ii. p. 352 (1890); *Baker, Ibis*, 1896, p. 343; *Sharpe, Hand-l.* v. p. 39 (1906).

Two eggs of Mrs. Gould's Yellow-backed Sun-bird are of a broad oval form and devoid of gloss; the ground-colour is white, with spots and small blotches of umber-brown and dull lavender all over the shell, but concentrating towards the larger end so as to form a wide zone. They measure respectively .56 by .44 and .5 by .44.

2. Laisung, North Cachar, 17th May.

E. C. Stuart Baker, Esq. [C.].

Æthopyga dabryi (Verr.).

Æthopyga dabryi, *Shelley, Monogr. Nect.* p. 39 (1876-80); *Gadow, Cat. Birds B. M.* ix. p. 28 (1884); *Oates, Fauna Brit. Ind., Birds*, ii. p. 353 (1890); *Baker, Ibis*, 1896, p. 344; *Sharpe, Hand-l.* v. p. 39 (1906).

Two eggs of Dabry's Yellow-backed Sun-bird are of a broad oval form and devoid of gloss; the ground-colour is white, spotted and blotched with reddish-brown and dull violet-brown, most of the markings concentrating so as to form a wide irregular zone round the larger end. They measure respectively .55 by .42 and .53 by .41.

2. Hungrum, N. Cachar, 25th June.

E. C. Stuart Baker, Esq. [C.].

Æthopyga bella, Tweedl.

Æthopyga bella, *Shelley, Monogr. Nect.* p. 77 (1876-80); *Gadow, Cat. Birds B. M.* ix. p. 29 (1884); *Ogilvie-Grant & Whitehead, Ibis*, 1898, p. 242, pl. v. fig. 10; *Sharpe, Hand-l.* v. p. 40 (1906).

The eggs of the White-breasted Yellow-backed Sun-bird are of a regular oval shape and devoid of gloss. They are pinkish-white, blotched with lilac-red and chestnut-brown, especially at the broad end, where the markings are larger and confluent. In addition,

there are traces of lavender-grey markings underlying the chestnut and sometimes a few specks and lines of dark purplish-red. Three examples measure respectively: .5 by .38; .51 by .39; .53 by .39.

3. Samar, Philippine Islands, 19th July. J. Whitehead, Esq. [C.].

Genus **EUDREPANIS**, *Sharpe*.

Eudrepanis pulcherrima (*Sharpe*).

(Plate I. fig. 9.)

Eudrepanis pulcherrima, *Shelley, Monogr. Nect.* p. 81 (1876-80); *Ogilvie-Grant & Whitehead, Ibis*, 1898, p. 242; *Sharpe, Hand-l.* v. p. 40 (1906).

Ethopyga pulcherrima, *Gadow, Cat. Birds B. M.* ix. p. 31 (1884).

Three eggs of the Short-tailed Yellow-backed Sun-bird resemble those of *Ethopyga siparaja* of the first or commoner type, but are rather more dull in colour. Three examples measure respectively: .55 by .43; .55 by .42; .54 by .44.

3. Paranos, Samar, Philippine Islands, J. Whitehead, Esq. [C.].
26th June.

Genus **ARACHNECHTHRA**, *Cab.*

Arachnechthra asiatica (*Lath.*).

(Plate I. figs. 14 & 15.)

Cinnyris asiaticus, *Shelley, Monogr. Nect.* p. 181 (1876-80); *Legge, B. Ceylon*, p. 566 (1879).

Cinnyris asiatica, *Gadow, Cat. Birds B. M.* ix. p. 56 (1884); *Nehrk. Kat. Eiersamml.* p. 77 (1899).

Arachnechthra asiatica, *Oates, Fauna Brit. Ind., Birds*, ii. p. 359 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 252 (1890); *Sharpe, Hand-l.* v. p. 41 (1906).

The eggs of the Purple Sun-bird are normally of a narrow, pointed oval shape and they are moderately, and in some instances highly, glossy. Mr. Hume thus describes them:—"The ground-colour is greenish-greyish- or brownish-white; in some but little, in others almost entirely obscured by the markings. These latter, always minute and ill-defined, are grey, purplish-grey, brown, or greyish-brown. A certain number of the eggs are pretty uniformly speckled and freckled over the whole surface, but in the majority the markings are densest towards the large end, where many exhibit more or less perfect caps or zones, and to which locality in some few specimens the markings are exclusively confined."

The eggs measure from .6 to .7 in length, and from .45 to .48 in breadth.

Arachnechthra lotenia (*Linn.*).

- Cinnyris lotenius*, *Shelley, Monogr. Nect.* p. 177 (1876-80); *Legge, B. Ceylon*, p. 563 (1879); *Gadow, Cat. Birds B. M.* ix. p. 60 (1884).
Arachnechthra lotenia, *Oates, Fauna Brit. Ind., Birds*, ii. p. 358 (1890);
id., *ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 251 (1890); *Sharpe, Hand-l.* v. p. 41 (1906).

An egg of Loten's Sun-bird is of a somewhat elongate, rather pointed oval shape, and has very little gloss: the ground-colour is white, finely dotted and mottled all over with pale umber-brown, the markings being rather more concentrated towards the larger end so as to form an indistinct zone. It measures .69 by .48.

1. Lunugala, Ceylon, 3rd May (*A. L.* *Butler*). Crowley Bequest.

Genus *LEPTOCOMA*, *Cab.*

Leptocoma minima (*Sykes*).

- Cinnyris minimus*, *Shelley, Monogr. Nect.* p. 143 (1876-80); *Legge, B. Ceylon*, p. 572 (1879).
Cinnyris minima, *Gadow, Cat. Birds B. M.* ix. p. 62 (1884); *Nehrke, Kat. Eiersamml.* p. 77 (1899).
Arachnechthra minima, *Oates, Fauna Brit. Ind., Birds*, ii. p. 363 (1890); *id.*, *ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 262 (1890).
Leptocoma minima, *Sharpe, Hand-l.* v. p. 41 (1906).

An egg of the Tiny Sun-bird in the Collection closely resembles

some of the eggs of *Arachnechthra asiatica*. It is greenish-white, densely freckled with greyish-brown. It measures '61 by '42.

1. Nilghiri Hills, S. India, Oct. Hume Coll.
(*W. Davison*).

Leptocoma hasselti (*Temm.*).

(Plate I. fig. 24.)

- Cinnyris hasselti*, *Shelley, Monogr. Nect.* p. 127 (1876-80); *Gadow, Cat. Birds B. M.* ix. p. 67 (1884).
Arachnechthra hasselti, *Oates, Fauna Brit. Ind., Birds*, ii. p. 360 (1890);
id., ed. Hume, Nests & Eggs Ind. Birds, ii. p. 258 (1890).
Leptocoma hasselti, *Sharpe, Hand-l.* v. p. 42 (1906).

Two eggs of Van Hasselt's Sun-bird are of an ordinary oval form and rather glossy. They are brown, with a zone of a somewhat darker shade of the same colour round the broader end and a few indistinct freckles elsewhere on the shell. Two examples measure respectively : '57 by '4; '58 by '4.

2. Salang, Malay Peninsula, 28th Feb. Hume Coll.
(*J. Durling*).

Leptocoma zeylonica (*Linn.*).

- Cinnyris zeylonica*, *Shelley, Monogr. Nect.* p. 137 (1876-80); *Legge, B. Ceylon*, p. 569 (1879); *Gadow, Cat. Birds B. M.* ix. p. 64 (1884);

Genus **CHALCOMITRA**, Reichenb.**Chalcomitra acik** (Antin.).

Cinnyris acik, Shelley, *Monogr. Nect.* p. 265 (1876-80); Gadow, *Cat. Birds B. M.* ix. p. 94 (1884).

Chalcomitra acik, Shelley, *Birds Afr.* ii. p. 90 (1900); Sharpe, *Hand-l.* v. p. 50 (1906).

Eggs of the Acik Scarlet-chested Sun-bird vary in shape from a regular oval to a pointed oval and are very slightly glossed. The five odd eggs in the Collection represent two distinct types of coloration. In the first the ground-colour varies from pinkish-white to greenish-white, and the markings, which are scattered all over the shell, are pale violet-grey and dark brown; some of the latter markings take the form of spots with blurred edges merging into the ground-colour, while others form short irregular lines and scrolls. In the second type the ground-colour is greenish-white, and the whole surface of the shell is finely and thickly mottled with dull olive-brown, or longitudinally smeared with cloudy streaks of the same colour. They measure from .66 to .79 in length, and from .48 to .53 in breadth.

5. Busoga, British East Africa,

Chalcomitra gutturalis (Linn.).

Cinnyris gutturalis, Shelley, *Monogr. Nect.* p. 261 (1876-80); Gadow, *Cat. Birds B. M.* ix. p. 91 (1884); Kuschel, *J. f. O.* 1895, p. 347; Nehrke, *Kat. Eiersamml.* p. 78 (1899); Marshall, *Ibis*, 1900, p. 236.

Chalcomitra gutturalis, *Shelley, Birds Afr.* ii. p. 93 (1900); *Sharpe, Hand-l.* v. p. 50 (1906).

An egg of the Southern Scarlet-chested Sun-bird is of a wide oval form, slightly pointed and devoid of gloss; the ground-colour is white, finely spotted and speckled all over with grey and olive-brown. It measures .65 by .51.

1. East Africa (*Nehr Korn Coll.*). Crowley Bequest.

Chalcomitra amethystina (*Shaw*).

(Plate I. figs. 19 & 20.)

Cinnyris amethystinus, *Sharpe, ed. Layard, Birds S. Africa*, p. 315 (1875-84); *Shelley, Monogr. Nect.* p. 269 (1876-80); *Kuschel, J. f. O.* 1895, p. 346.

Cinnyris amethystina, *Gadow, Cat. Birds B. M.* ix. p. 96 (1884); *Nehr k. Kat. Eiersamml.* p. 78 (1899).

Chalcomitra amethystina, *Shelley, Birds Afr.* ii. p. 103 (1900); *Sharpe, Hand-l.* v. p. 51 (1906).

The eggs of the Amethyst Sun-bird are extremely variable. Two examples in the Collection are regular ovals and of a greyish cream-colour, longitudinally smeared with purplish-grey and spotted with dark sooty-brown, these markings being much blurred and smudged. Two other eggs are narrow ovals and of a darker shade of greyish cream-colour, longitudinally streaked and smeared with pale lavender-grey and very sparingly spotted with dark brown. Other specimens are of quite a different character, being cream-coloured, densely mottled all over with brown and lavender-grey. Eight examples measure from .69 to .81 in length, and from .5 to .55 in breadth.

Elæocerthia fusca (*Vieill.*).

Cinnyris fuscus, *Shelley, Monogr. Nect.* p. 285 (1876-80).

Cinnyris fusca, *Gadow, Cat. Birds B. M.* ix. p. 75 (1884); *Kuschel, J. f. O.* 1895, p. 346; *Nehr k. Kat. Eiersamml.* p. 77 (1899).

Elæocerthia fusca, *Shelley, Birds Afr.* ii. p. 115 (1900); *Sharpe, Hand-l.* v. p. 52 (1906).

Eggs of the White-vented Black Sun-bird are of a regular oval form or slightly pointed, and are almost devoid of gloss. They vary considerably in colour and markings: four have the ground-colour greenish-white, finely mottled and clouded with lavender-grey and

brownish-grey; in one of these the markings are mostly confined to the larger end of the shell, in the other three they are distributed all over the shell, and one egg is also marked with dark brown spots and scrolls. In the fifth egg the ground-colour is scarcely visible, being almost entirely hidden by dense clouded markings of dull lavender-brown. The measurements vary from .57 to .66 in length, and from .41 to .48 in breadth.

Cyrtostomus frenatus (*S. Müll.*).

Nectarinia australis, *Gould, Handb. Birds Austr.* i. p. 584 (1865); *Ramsay, Ibis*, 1865, p. 85.

Cinnerys frenatus, *Shelley, Monogr. Nect.* p. 153 (1876-80).

Cinnerys frenata, *Gadow, Cat. Birds B. M.* ix. p. 85 (1884); *North, Nests & Eggs Austr. Birds*, p. 232 (1889); *Nehrke, Kat. Eiersamml.* p. 78 (1899); *Robinson & Laverock, Ibis*, 1900, p. 633; *Campbell, Nests & Eggs Austr. Birds*, i. p. 345, pl. 13 (1901).

Cyrtostomus frenatus, *Sharpe, Hand-l.* v. p. 56 (1906).

The eggs of the Australian Yellow-breasted Sun-bird are of a narrow oval shape and almost devoid of gloss. They are pale greenish-grey, mottled with brown and pale lavender. In two specimens the markings form a distinct zone round the broad end; in another, an irregular cap; and these three examples have, moreover, a few black specks and lines within the zone or on the cap. Four eggs measure respectively: .63 by .47; .68 by .49; .63 by .43; .67 by .45.

An egg in the Crowley Collection (said to be of this species) differs greatly from the above, having the ground-colour white with blotches and spots of lavender-grey and irregular streaks, scrolls, and dots of deep brown, most of the markings being concentrated so as to form a zone round the larger end of the shell. It measures .68 by .46.

Cyrtostomus pectoralis, *Sharpe, Hand-l.* v. p. 57 (1906).

The eggs of the Malayan Yellow-breasted Sun-bird are extremely variable. They range from a narrow to a broad oval form and are without gloss. In some specimens the ground-colour is nearly pure white, in others greyish-white, pale greenish-grey, or brownish-white. Some eggs are densely mottled all over with brown and underlying lavender; others are blotched and clouded with pale purplish-brown and lilac-grey; others again are marked with well-defined spots and blotches of purplish-grey and dark brown. Many specimens exhibit a large cap of confluent markings at the broad end, others are evenly marked all over. Many eggs, like those of *C. flammixillaris*, are sparingly spotted with dark purplish- or chocolate-brown. Specimens measure from .57 to .7 in length, and from .41 to .48 in breadth.

Cyrtostomus zenobia, *Sharpe, Hand-l.* v. p. 57 (1906).

An egg of the Black-breasted Sun-bird is of a broad, somewhat pointed oval shape, and is slightly glossy. The ground-colour is

pinkish-white, and the markings, arranged almost entirely in an irregular zono round the larger end, consist of smudgy purplish-grey under-markings with overlying spots, scrolls, and lines of deep brown. It measures $\cdot 64$ by $\cdot 46$.

1. Amboina (*Nehrkorn Coll.*).

Crowley Bequest.

Genus **ARACHNOTHERA**, *Temm.*

Arachnothera longirostris (*Lath.*).

(Plate I. fig. 8.)

Arachnothera longirostra, *Shelley, Monogr. Nect.* p. 357 (1876-80).

Arachnothera longirostris, *Gadow, Cat. Birds B. M.* ix. p. 103 (1884); *Oates, Fauna Brit. Ind., Birds*, ii. p. 371 (1890); *Baker, Ibis*, 1896, p. 345; *Nehrk. Kat. Eiersamml.* p. 78 (1899); *Sharpe, Hand-l.* v. p. 58 (1906).

Eggs of the Little Spider-hunter are of a regular oval form and devoid of gloss. The ground-colour is white, and the markings, mostly concentrated into a strongly defined zone round the larger end of the shell, consist of pale violet-grey, and small, usually very small, closely approximated surface-spots of reddish-brown or light red. The eggs measure from $\cdot 74$ to $\cdot 77$ in length, and from $\cdot 49$ to $\cdot 51$ in breadth.

Arachnothera magna (*Hodgs.*).

(Plate I. fig. 13.)

Arachnothera magna, *Shelley, Monogr. Nect.* p. 347 (1876-80); *Gadow, Cat. Birds B. M.* ix. p. 105 (1884); *Oates, Fauna Brit. Ind., Birds*, ii. p. 369 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 268 (1890); *Nehrk. Kat. Eiersamml.* p. 78 (1899); *Sharpe, Hand-l.* v. p. 58 (1906).

The eggs of the Large Indian Spider-hunter are of a pointed oval form and very smooth and glossy. Two specimens are of a plain brownish-bronze colour; another is entirely of a purplish-brown colour; and other specimens are purplish-brown, mottled with a darker shade of the same. Six examples measure from $\cdot 86$ to $\cdot 97$ in length, and from $\cdot 63$ to $\cdot 72$ in breadth.

Arachnothera everetti, Sharpe.*Arachnoraphis everetti*, Sharpe, *Ibis*, 1893, p. 861.*Arachnothera everetti*, Sharpe, *Hand-l. v.* p. 59 (1906).

Two eggs of Everett's Spider-hunter are of a long, rather pointed oval shape and somewhat glossy. The ground-colour is whitish, finely mottled all over with dull purplish-brown, this colour becoming most dense towards the larger end, where it forms a clearly defined zone or cap. The eggs measure respectively: .88 by .6 and .9 by .6.

2. Mt. Kina Balu, N. Borneo, 16th Crowley Bequest.
March (*J. Whitehead*).

Genus *ANTHOTHREPTES*, Swains.*Anthothreptes collaris* (Vieill.).

(Plate I. figs. 21 & 22.)

Nectarinia collaris, Gurney, *Ibis*, 1860, p. 208.*Anthodiæta collaris*, Sharpe, ed. Layard, *Birds S. Africa*, p. 320 (1875-84); *Shelley, Monogr. Nect.* p. 339 (1876-80).*Anthothreptes collaris*, Gadow, *Cat. Birds B. M.* ix. p. 116 (1884); *Nehr. Kat. Eiersamml.* p. 78 (1899); *Sharpe, Hand-l. v.* p. 61 (1906).

The eggs of the Natal Collared Sun-bird are of an ordinary oval form and exhibit little gloss. They vary much in colour; two examples are bluish-white, marked, almost entirely in the form of a narrow zone round the broad end, with spots and short fine lines of dark umber-brown and lavender. Two others are pale greyish-buff, marked in a broad zone round the large end with confluent blotches and lines of purplish-brown and lavender. Two others are somewhat similarly marked, but on a pinkish-buff ground. Seven examples, which are all more or less imperfect, measure about .7 by .45.

Anthothreptes malaccensis (Scop.).

(Plate I. fig. 25.)

Anthreptes malaccensis, Shelley, *Monogr. Nect.* p. 315 (1876-80); *Sharpe, P. Z. S.* 1879, p. 342.*Anthothreptes malaccensis*, Gadow, *Cat. Birds B. M.* ix. p. 122 (1884); *Oates, Fauna Brit. Ind., Birds*, ii. p. 366 (1890); *Nehr. Kat. Eiersamml.* p. 79 (1899); *Sharpe, Hand-l. v.* p. 62 (1906).

The eggs of the Malaccan Brown-throated Sun-bird are of a regular oval shape and without gloss. They vary in ground-colour

from white or pinkish-white to pinkish-grey, and they are elegantly marked all over with clouds and smears of underlying lavender-grey, and specks, spots, hieroglyphics, and fine hair-lines of purplish-brown or black, similar to those found on the eggs of many of the Buntings. Specimens measure from .65 to .76 in length, and from .49 to .53 in breadth.

Austr. Birds, i. p. 364 (1901).

Melithreptes validirostris, *Sharpe, Hand-l.* v. p. 65 (1906).

An egg of the Strong-billed Honey-eater is similar to those of *M. atricapillus*, but is somewhat larger. It measures .9 by .63.

1. Tasmania.

Crowley Bequest.

Melithreptes brevirostris, Vig. & Horsf.

(Plate II. figs. 5 & 9.)

Melithreptes brevirostris, *Gadow, Cat. Birds B. M.* ix. p. 207 (1884);
North, Nests & Eggs Austr. Birds, p. 225 (1889); *Campbell, Nests*
& Eggs Austr. Birds, i. p. 304 (1901).

Melithreptes brevirostris, *Sharpe, Hand-l.* v. p. 65 (1906).

The eggs of the Short-billed, or Brown-headed, Honey-eater are somewhat elliptical in shape and exhibit a very small amount of gloss. They vary from flesh-colour to pale salmon-colour or light buff and are marked in various ways. Two examples are speckled with chestnut and lilac, but almost entirely at the broad end, where the markings form a broad zone. Two other eggs are mottled all over with pale brownish-purple, and others again are speckled with brownish-purple, chiefly at the larger end. They measure from .6 to .7 in length, and from .45 to .48 in breadth.

Genus *GLYCIPHILA*, Swains.

Glyciphila melanops (Lath.).

Meliphaga fulvifrons, Thien. *Fortpflanz. ges. Vög.* tab. xvi. fig. 4 (1845-54).

Glyciphila fulvifrons, Gould, *Handb. Birds Austr.* i. p. 495 (1865); *Gadow, Cat. Birds B. M.* ix. p. 210 (1884); *North, Nests & Eggs Austr. Birds*, p. 196, pl. xiii. fig. 6 (1889); *Nehrk. Kat. Eiersamml.* p. 81 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 370, pl. 13 (1901).

Glyciphila melanops, Sharpe, *Hand-l.* v. p. 71 (1906).

The eggs of the Fulvous-fronted Honey-eater are of a regular oval shape and slightly glossy. They are white, sparingly speckled and spotted with pale chestnut and lilac-red. Occasionally specimens appear to be spotted with deep purplish-brown and purplish-grey. The markings are chiefly confined to the broad end. Gould says some of the eggs of this species are quite white, without a trace of spots, but no such specimens are now in his collection. Examples measure from .78 to .9 in length, and from .6 to .63 in breadth.

|--|-------------|

Conopophila ruficularis, Gould.

Eutamias ruficularis, Gadow, *Cat. Birds B. M.* ix. p. 219 (1884); Campbell, *Nests & Eggs Austr. Birds*, i. p. 378, pl. 13 (1901).

Conopophila ruficularis, Gould, *Handb. Birds Austr.* i. p. 533 (1865); Sharpe, *Hand-l.* v. p. 73 (1906).

Eggs of the Red-throated Honey-eater are similar to those of

C. albigularis, but, in some specimens, the fine markings are concentrated towards the larger end, and form an irregular zone or cap. They measure from .7 to .75 in length, and from .5 to .53 in breadth.

20. North Queensland.

W. Radcliffe Saunders, Esq.
[P.]

Genus **CERTHIONYX**, *Less.*

Certhionyx variegatus, *Less.*

Entomophila leucomelas, *Gadow, Cat. Birds B. M.* ix. p. 220 (1884);
Campbell, Nests & Eggs Austr. Birds, i. p. 380, pl. 13 (1901).

Certhionyx variegatus, *Sharpe, Hand-l.* v. p. 73 (1906).

Eggs of the Pied Honey-eater vary in shape, from a broad to a pointed oval form, and are very slightly glossy. The ground-colour is white or yellowish-white and the markings of dark brown, purplish-brown, and lilac-grey take the form of numerous small spots and blotches, which are distributed all over the surface of the shell. They measure from .8 to .98 in length, and from .48 to .58 in breadth.

24. Gascoyne River, West Australia. T. Carter, Esq. [C.]

Genus **MELIPHAGA**, *Lewin.*

Meliphaga phrygia (*Lath.*).

Meliphaga phrygia, *Thien. Fortpflanz. ges. Vög.* tab. xvi. fig. 9 (1845-54);
Gould, Handb. Birds Austr. i. p. 527 (1865); *Gadow, Cat. Birds B. M.* ix. p. 221 (1884); *North, Nests & Eggs Austr. Birds*, p. 210, pl. xii. fig. 8 (1889); *Nehrk. Kat. Eiersamml.* p. 81 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 381, pl. 14 (1901); *Sharpe, Hand-l.* v. p. 74 (1906).

Xanthomyza phrygia, *Ramsay, Trans. Phil. Soc. N. S. W.* 1865, p. 319, pl. i. fig. 3.

Eggs of the Warty-faced Honey-eater are of a very broad oval shape and moderately glossy. They are of a rich salmon-buff colour, speckled and spotted with purplish-red and underlying lavender. The markings are rather dense at the broad end, but sparse elsewhere. Four examples measure from .9 to 1.0 in length, and from .69 to .7 in breadth.

2. New South Wales (*Wilson*).

Gould Coll.

Genus **MELILESTES**, *Salvad.*

Melilestes poliopterus, *Sharpe.*

(Plate II. fig. 21.)

Melilestes polioptera, *Sharpe, Journ. Linn. Soc., Zool.* xvi. pp. 318, 438 (1882).

Arachnothera polioptera, *Gadow, Cat. Birds B. M.* ix. p. 111 (1884).

Melilestes poliopterus, *Sharpe, Hand-l.* v. p. 75 (1906).

Two eggs of the Grey-winged Honey-eater in the Collection are almost elliptical in shape and slightly glossy. They are pinkish-white, thickly mottled with pale reddish-brown, and feebly marked at the broad end with a few blotches of pale lavender. They measure respectively : $\cdot 95$ by $\cdot 7$; $\cdot 95$ by $\cdot 72$.

2. S.E. New Guinea.

Mr. E. Weiske [C.].

Genus **MELIPOTES**, *Sclat.*

Melipotes fumigatus, *A. B. Meyer.*

(Plate II. fig. 7.)

Melipotes fumigatus, *Meyer, Zeitschr. ges. Orn.* iii. p. 22 (1886) ; *Sharpe, Hand-l.* v. p. 76 (1906).

Melipotes atriceps, *Grant, Bull. B. O. C.* v. p. xiv (1895).

Two eggs of the Black-headed Honey-eater are of a regular oval form and devoid of gloss ; they have the ground-colour pale pinkish-white, and the markings, which are mostly concentrated round the larger end so as to form a cap, take the form of rather faint purplish-red blotches, more or less confluent towards the larger end. They measure respectively $1\cdot 22$ by $\cdot 81$ and $1\cdot 07$ by $\cdot 79$.

1. S.E. New Guinea.

Mr. E. Weiske [C.].

1. S.E. New Guinea.

Genus **MELIRRHOPHETES**, *A. B. Meyer.*

Melirrhophetes batesi, *Sharpe.*

(Plate II. fig. 12.)

Melirrhophetes batesi, *Sharpe in Gould's Birds N. Guinea*, iii. pl. 35 (1886) ; *id., Hand-l.* v. p. 77 (1906).

A damaged egg of Bates' Honey-eater appears to have been of a regular oval form and very slightly glossed. It has the ground-colour salmon-buff, becoming rather more intense towards the larger end, where it forms a zone, which is also indistinctly marked with spots of faint purplish-red. It measures $1\cdot 22$ by $\cdot 86$.

1. S.E. New Guinea.

Mr. E. Weiske [C.].

Genus **STIGMATOPS**, *Gould.*

Stigmatops ocularis (*Gould*).

Meliphaga ocularis, *Thien. Fortpflanz. ges. Vög.* tab. xvi. fig. 3 (1845-54).

Stigmatops ocularis, *Gould, Handb. Birds Austr.* i. p. 500 (1865) ; *North, Nests & Eggs Austr. Birds*, p. 198, pl. xiii. fig. 17 (1889) ; *Sharpe, Hand-l.* v. p. 78 (1906).

Stigmatops subocularis, *Gould, tom. cit.* p. 501.

Glyciphila ocularis, *Gadow, Cat. Birds B. M.* ix. p. 213 (1884) [part.] ;

Nehr. Kat. Eiersamml. p. 81 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 374, pl. 13 (1901).
Glyciphila subocularis, *Le Souëf, Ibis*, 1900, p. 463; *Campbell, tom. cit.* p. 375.

The eggs of the Brown Honey-eater are of a regular oval shape and almost devoid of gloss. They vary from white to cream-colour, and are very minutely speckled, almost entirely at the broad end, with pale rufous. They measure from .62 to .7 in length, and from .49 to .51 in breadth.

Genus *PTILOTTIS*, Swains.

Ptilotis carunculata (Gmel.).

(Plate II. fig. 3.)

Ptilotis carunculata, *Finsch & Hartl. Fauna Centr.-Polynes.* p. 58, pl. i. figs. 1 & 2 (1867); *Whitmee, Ibis*, 1875, p. 438; *Gadow, Cat. Birds B. M.* ix. p. 225 (1884); *Nehr. Kat. Eiersamml.* p. 81 (1899); *Sharpe, Hand-l.* v. p. 79 (1906).

Eggs of the Carunculated Honey-eater are of a broad oval form and moderately glossy. They are of a pinkish-white or salmon-pink colour, spotted, chiefly at the broad end, with purplish-red and very pale underlying lavender. A few very dark, almost black, specks are sometimes found scattered over the shell. They measure from .96 to 1.0 in length, and from .66 to .72 in breadth.

Ptilotis procerior, *Finsch & Hartl.*

(Plate II. fig. 8.)

Ptilotis carunculata, *Gadow, Cat. Birds B. M.* ix. p. 225 (1884) [part.].
Ptilotis procerior, *Layard, P. Z. S.* 1875, pp. 28, 431; *Wiglesw. Abh. Mus. Dresden*, 1890-91, No. 6, p. 34; *Sharpe, Hand-l.* v. p. 79 (1906).

Eggs of Finsch's Carunculated Honey-eater are usually of a broad regular oval form: one example in the Collection is, however, longer and more pointed; the ground-colour is white, or pinkish-white; the markings are most numerous towards the larger end and form a zone of spots which are purplish-red and pale lilac. They measure from .94 to 1.0 in length, and from .65 to .72 in breadth.

Ptilotis analoga, Reichenb.

Ptilotis analoga, *Gadow, Cat. Birds B. M.* ix. p. 227 (1884) [part.]; *Sharpe, Hand-l.* v. p. 80 (1906).

Ptilotis notata, *North, Nests & Eggs Austr. Birds*, p. 209, pl. xiii. fig. 4 (1889); *Le Souëf, Ibis*, 1898, p. 58; *Campbell, Nests & Eggs Austr. Birds*, i. p. 383 (1901).

The eggs of the Yellow-spotted Honey-eater vary from a narrow to a broad oval shape and are moderately glossy. They are white, spotted and blotched with dark umber-brown or deep chocolate-brown. The markings are generally few in number and confined chiefly to the broad end of the egg. In two examples, however, in the Collection they are evenly spread over the whole shell, and are intermingled with other spots of underlying pale lavender. They measure from .88 to .91 in length, and from .65 to .7 in breadth.

The eggs of the Yellow-faced Honey-eater vary from a narrow to a broad oval shape and are moderately glossy. They are of a pinkish cream-colour, freckled, spotted or blotched, generally more densely at the broad end than elsewhere, with various shades of red, ranging from light chestnut to deep purplish-red, and with lavender or lilac. The markings are often gathered into a broad confluent zone at the broad end, the remainder of the shell being sparingly spotted; while, in some cases, they are evenly spread over the entire surface of the egg. Specimens measure from .77 to .84 in length, and from .55 to .61 in breadth.

Ptilotis cratitia, Gould.

Ptilotis cratitia, Gadow, *Cat. Birds B. M.* ix. p. 243 (1884); Campbell, *Nests & Eggs Austr. Birds*, i. p. 401 (1901); Sharpe, *Hand-l.* v. p. 83 (1906).

The two eggs of the Wattled-cheeked Honey-eater collected by Mr. T. Carter differ from those described by Mr. Campbell in having the ground-colour pinkish-buff and salmon-colour respectively, instead of white. Both eggs are sparingly and finely spotted with reddish-brown and purplish-grey, the markings being most numerous round the larger end, where they form an irregular cap or zone. They measure respectively: .76 by .56 and .78 by .55.

Ptilotis ornata, Gould.

Ptilotis ornata, Gould, *Handb. Birds Austr.* i. p. 515 (1865); Gadow, *Cat. Birds B. M.* ix. p. 244 (1884); North, *Nests & Eggs Austr. Birds*, p. 204 (1889); Nehrke, *Kat. Eiersamm.* p. 82 (1899); Campbell, *Nests & Eggs Austr. Birds*, i. p. 406, pl. 14 (1901); Sharpe, *Hand-l.* v. p. 83 (1906).

The eggs of the Graceful Honey-eater are richly coloured, and resemble those of *P. gracilis* and *P. fusca*. They are of a pinkish-buff or deep salmon-pink, spotted with chestnut-red and lavender or lilac. The markings are chiefly confined to the broad end. Three examples measure respectively: .79 by .58; .78 by .59.

2. West Australia, 4th Sept. Gould Coll.

Ptilotis plumula, Gould.

Meliphaga plumula, *Thien. Fortpflanz. ges. Vög.* tab. xvi. fig. 8 (1845-54).
Ptilotis plumula, Gould, *Handb. Birds Austr.* i. p. 516 (1865); *Gadow, Cat. Birds B. M.* ix. p. 245 (1884); *North, Nests & Eggs Austr. Birds*, p. 205 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 407 (1901); *Sharpe, Hand-l.* v. p. 83 (1906).

The eggs of the Plumed Honey-eater in the Collection very closely resemble those of *P. ornata*. Two examples measure respectively: .79 by .59; .87 by .62.

2. West Australia, 7th Dec. Gould Coll.

Ptilotis penicillata (Gould).

Ptilotis penicillata, Gould, *Handb. Birds Austr.* i. p. 519 (1865); *Gadow, Cat. Birds B. M.* ix. p. 244 (1884); *North, Nests & Eggs Austr. Birds*, p. 205, pl. xii. fig. 15 (1889); *Nehrk. Kat. Eiersamml.* p. 82 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 403 (1901); *Sharpe, Hand-l.* v. p. 83 (1906).

The eggs of the White-plumed Honey-eater are of a pointed oval shape and slightly glossy. They are of a pinkish-cream-colour, speckled and spotted with purplish-red, purplish-brown, and underlying lavender. In some examples the markings are confined to the broad end; in others they are evenly spread over the entire surface of the shell. The ground-colour is often suffused with darker pink at the broad end. Specimens measure from .71 to .9 in length, and from .52 to .59 in breadth.

Ptilotis leilavalensis, *North*.

Ptilotis leilavalensis, *North*, *Rec. Austr. Mus.* iii. p. 106 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 405 (1901); *Sharpe, Hand-l.* v. p. 84 (1906).

Eggs of Carter's Honey-eater vary from a perfect elliptical form to a slightly elongate oval shape and are very slightly glossed; the ground-colour is white or pinkish-white, finely and sparingly spotted with deep purplish-brown, reddish-brown, and lilac, the markings being mostly confined to the larger end of the shell. They measure from .76 to .83 in length, and from .57 to .64 in breadth.

Genus **XANTHOTIS**, *Reichenb.*

Xanthotis lessoni, *Sharpe*.

(Plate II. fig. 6.)

Ptilotis chrysotis, *Gadow (nec Lath.)*, *Cat. Birds B. M.* ix. p. 238 (1884).

Xanthotis chrysotis, *Gould, Birds New Guinea*, iii. pl. 51 (1886).

Xanthotis lessoni, *Sharpe, Hand-l.* v. p. 85 (1906).

Three eggs of the Golden-eared Honey-eater taken by Mr. Weiske in New Guinea are of an ordinary oval shape and devoid of all gloss. They are somewhat Pitta-like in general appearance, being white, rather densely speckled, spotted, and, here and there, blotched with very deep blackish-brown or black and purplish-grey. They measure respectively: .98 by .71; 1 by .73; 1 by .71.

Genus **PTILOPRORA**, *De Vis*.

Ptiloprora guisei, *De Vis*.

(Plate II. fig. 22.)

Ptiloprora guisei, *De Vis, Rep. New Guinea*, 1893-94, App. EE, p. 103 (1894); *Sharpe Hand-l.* v. p. 86 (1906).

An egg of De Vis' Honey-eater is of a rather long blunt oval form and almost devoid of gloss. The ground-colour is white, with small, thinly distributed spots of deep purple-brown, purplish-red, and lavender, most numerous towards the larger end, several of the larger markings have blurred edges. It measures .87 by .6.

Genus **MELIORNIS**, Gray.**Meliornis pyrrhoptera** (Lath.).

Lichmera australasiana, Gould, *Handb. Birds Austr.* i. p. 493 (1865);
North, Nests & Eggs Austr. Birds, p. 195, pl. xii. fig. 17 (1889).

Meliornis australasiana, Gadow, *Cat. Birds B. M.* ix. p. 252 (1884);
Nehr. Kat. Eiersamml. p. 82 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 411 (1901).

Meliornis pyrrhoptera, Sharpe, *Hand-l.* v. p. 87 (1906).

Eggs of the Crescent Honey-eater are of a regular or rather blunt oval form and very slightly glossy. The ground-colour is pinkish-cream-colour, speckled, chiefly about the broader end, with purplish-red and lilac: in one egg the ground-colour shades into bright chestnut-rufous towards the larger end. They measure from .7 to .76 in length, and from .52 to .55 in breadth.

Genus **ANTHORNIS**, *Gray*.**Anthornis melanura** (*Sparrm.*).

(Plate II. figs. 15 & 20.)

Anthornis melanura, *Potts, Trans. New Zeal. Inst.* ii. p. 56 (1869); iii. p. 72 (1870); *Gadow, Cat. Birds B. M.* ix. p. 255 (1884); *Reischek, Tr. N. Zeal. Inst.* 1886, p. 186; *Buller, Birds New Zeal.* 2nd ed. i. p. 85 (1888); *Nehrke, Kat. Eiersamml.* p. 82 (1899); *Sharpe, Hand-l.* v. p. 88 (1906).

The eggs of the New-Zealand Bell-bird are of an ordinary oval shape and quite devoid of gloss. They vary from white to pinkish-white, and are marked, chiefly at the broad end, with spots and blotches of different shades of red, varying from brick-red to pale lilac-red. On some specimens the markings are small and widely-scattered; on others, they consist of large blotches, which are sometimes confluent and form a large cap at the broad end. Examples measure from .84 to .95 in length, and from .65 to .7 in breadth.

Genus **MYZANTHA**, *Vig. & Horsf.***Myzantha garrula** (*Lath.*).

(Plate III. fig. 9.)

Meliphaga garrula, *Thien. Fortpflanz. ges. Vög.* tab. xvi. fig. 16 (1845-54).
Myzantha garrula, *Gould*, *Handb. Birds Austr.* i. p. 574 (1865); *North*,
Nests & Eggs Austr. Birds, p. 229, pl. xii. fig. 2 (1889); *Sharpe*,
Hand-l. v. p. 89 (1906).

- Manorhina garrula*, *Gadow, Cat. Birds B. M.* ix. p. 260 (1884); *Nehrk. Kat. Eiersamml.* p. 82 (1899).
Myzantha (Manorhina) garrula, *Campbell, Nests & Eggs Austr. Birds*, i. p. 420, pl. 14 (1901).

The eggs of the Garrulous Honey-eater vary in shape from narrow to broad oval and they are slightly glossy. They are cream-coloured, profusely spotted and blotched with rich chestnut and purplish-grey. The disposition of the markings varies considerably. On some specimens they are large and crowded together over the broader half, where they form a dense cap; on others, they are smaller and pretty evenly distributed over the entire shell. Examples measure from .95 to 1.22 in length, and from .71 to .82 in breadth.

Myzantha flavigula, Gould.

(Plate III. figs. 6-8.)

- Myzantha flavigula*, Gould, *Handb. Birds Austr.* i. p. 578 (1865); *Campbell, Nests & Eggs Austr. Birds*, i. p. 422 (1901); *Sharpe, Hand-l.* v. p. 89 (1906).
Manorhina flavigula, *Gadow, Cat. Birds B. M.* ix. p. 261 (1884); *Nehr. Kat. Eiersamml.* p. 82 (1899).

The eggs of the Yellow-throated Miner are of a more or less pointed oval form and somewhat glossy. The ground-colour varies from pale pinkish- or buffy-white to pale brick-colour, and the markings, which consist of numerous spots and small blotches of purplish-brown, reddish-brown, and lavender, vary considerably in both tint and number in different examples. In all, they are most numerous round the larger end, but in some examples they are thickly scattered over the whole surface of the shell. They measure from 1.1 to 1.15 in length, and from .71 to .75 in breadth.

Myzantha lutea, Gould.

(Plate III. figs. 13 & 16.)

- Myzantha lutea*, Gould, *Handb. Birds Austr.* i. p. 577 (1865); *Hall, Vict. Nat.* xviii. p. 32 (1901); *Sharpe, Hand-l.* v. p. 89 (1906).
Manorhina lutea, *Gadow, Cat. Birds B. M.* ix. p. 262 (1884).

Two eggs in the Collection referred by Gould to the Luteous Honey-eater or Yellow Miner (see fig. 13) are of a narrow oval shape and devoid of gloss. The ground-colour is of a rich salmon-pink colour, rather profusely mottled and streaked with reddish-brown and lilac-grey, the markings being very evenly distributed over the entire surface of the shell. They measure respectively: 1.10 by .7; 1.11 by .71.

The two eggs collected by Mr. T. Carter present a very different

type (see fig. 16), being of a short blunt oval form and somewhat glossy. The ground-colour is of a light brick-colour, and the markings of light red and lilac are mostly confined to the large end. Both eggs measure .95 by .7.

M.* ix. p. 265 (1884); *Nehrsk. Kat. Eiersamml.* p. 83 (1899).

Two eggs of the Spiny-checked Honey-eater are of a rather long pointed oval shape and are very slightly glossed. The ground-colour is whitish-buff, most intense towards the larger end, and the markings, which are mostly confined to the larger end, consist of a limited number of spots and small blotches of dark brown and lilac-grey. They measure respectively 1.1 by .67 and 1.05 by .7.

2. Wimmera District, Victoria, 11th October (*A. J. North*). Crowley Bequest.

Genus **ENTOMYZA**, *Swains.*

Entomyza cyanotis (*Lath.*).

Entomyza cyanotis, *Gould, Handb. Birds Austr.* i. p. 560 (1865); *Gadow, Cat. Birds B. M.* ix. p. 268 (1884); *North, Nests & Eggs Austr. Birds*, p. 223, pl. xii. fig. 1 (1889); *Nehrk. Kat. Eiersamml.* p. 83 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 429, pl. 15 (1901); *Sharpe, Hand-l.* v. p. 92 (1906).

Eggs of the Blue-faced Honey-eater do not differ from those of *Acanthochæra carunculata* and *A. inauris* except in size and shape, being of a rather longer and more pointed oval. They measure from 1.2 to 1.27 in length, and from .77 to .85 in breadth.

2. Dawson River, Queensland, 13th August (*North Coll.*). Crowley Bequest.
1. Dobroyd, New South Wales (*E. P. Ramsay: Tristram Coll.*). Crowley Bequest.

Genus **TROPIDORHYNCHUS**, *Vig. & Horsf.*

Tropidorhynchus subtuberosus, *S. Müll.*

(Plate III. figs. 10 & 11.)

Philemon novæ guineæ subtuberosus, *Hartert, Nov. Zool.* iii. p. 238 (1896).

Tropidorhynchus subtuberosus, *Sharpe, Hand-l.* v. p. 92 (1906).

Two eggs of the Fergusson-Island Wattled Honey-eater are of a rather broad and somewhat pointed oval form, and are almost devoid of gloss. One has the ground-colour pinkish-white finely speckled all over with purplish-red and lilac-grey, and with large blotches of the same colour distributed over the greater part of the shell, but most numerous towards the larger end. The second egg has the ground-colour pale brick-red, and is much more sparingly and less strongly marked with small spots and rather large blotches of light red and lavender-grey. The eggs measure respectively 1.3 by .96 and 1.33 by .91.

2. Fergusson Island, 5th December (*A. S. Meek*). Crowley Bequest.

Tropidorhynchus argenteiceps, Gould.

(Plate III. fig. 15.)

Tropidorhynchus argenteiceps, Gould, *Handb. Birds Austr.* i. p. 548 (1865); *Sharpe, Hand-l.* v. p. 93 (1906).

Philemon argenteiceps, Gadow, *Cat. Birds B. M.* ix. p. 272 (1884); *Campbell, Nests & Eggs Austr. Birds*, i. p. 434, ii. App. p. 1080 (1901).

Two eggs of the Silvery-crowned Friar-bird are of a somewhat pointed oval form and very slightly glossy. The ground-colour is pale pinkish-white, rather sparingly marked all over with faint spots and small blotches of pale red and lilac-grey. In one example the markings are much stronger and form an indistinct zone round the larger end; in the other they are nearly obsolete. The two eggs measure respectively 1·17 by ·8 and 1·21 by ·83.

2. Queensland, 29th October.

T. Carter, Esq. [C.].

Tropidorhynchus buceroides (Swains.).

Tropidorhynchus buceroides, Gould, *Handb. Birds Austr.* i. p. 547 (1865); *Sharpe, Hand-l.* v. p. 93 (1906).

Philemon buceroides, Gadow, *Cat. Birds B. M.* ix. p. 272 (1884); *Nehrke, Kat. Eiersamml.* p. 83 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 434, pl. 15 (1901).

An egg believed to be that of the Helmeted Friar-bird is of a rather broad and somewhat pointed oval shape and distinctly glossy. The ground-colour is pale pinkish-brick-colour, spotted and blotched all over the shell with bright light-red and dull purplish-grey. It measures 1·3 by ·91.

This egg closely resembles the figure given by Campbell, *op. cit.*

1. N. Australia.

W. Radcliffe Saunders, Esq.
[P.].

Tropidorhynchus corniculatus (Lath.).

Meliphaga corniculata, Thien. *Fortpflanz. ges. Vög.* tab. xvi. fig. 13 (1845-54).

Tropidorhynchus corniculatus, Gould, *Handb. Birds Austr.* i. p. 545 (1865); *North, Nests & Eggs Austr. Birds*, p. 217 (1889); *Sharpe, Hand-l.* v. p. 93 (1906).

Philemon corniculatus, Gadow, *Cat. Birds B. M.* ix. p. 271 (1884); *Nehrke, Kat. Eiersamml.* p. 83 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 432, pl. 15 (1901).

Some of the eggs of the Friar-bird resemble those of *Acanthochara carunculata* and are very distinctly marked. Others are spotted and mottled with very pale rufous and grey. They measure from 1·18 to 1·4 in length, and from ·87 to ·95 in breadth.

Genus **PHILEMON**, Vieill.

Philemon citreogularis (Gould).

Tropidorhynchus citreogularis, Gould, *Handb. Birds Austr.* i. p. 549 (1865).

Philemon citreogularis, Gadow, *Cat. Birds B. M.* ix. p. 277 (1884); *North, Nests & Eggs Austr. Birds*, p. 219 (1889); *Nehrk. Kat. Eiersamml.* p. 83 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 435, pl. 15 (1901); *Sharpe, Hand-l.* v. p. 94 (1906).

Eggs of the Yellow-throated Friar-bird vary from a pointed to a blunt oval shape and have some gloss. They are cream-colour: one type is very distinctly and finely spotted with reddish-brown or purplish-red and purplish-grey. The markings are everywhere dense, but more so at the broad end than elsewhere. The other type is very different, having the whole surface of the shell blotched, clouded, and longitudinally streaked with light red and purplish-grey, and are indistinguishable from certain blotched eggs of *Myzantha garrula*. They measure from .95 to 1.02 in length, and from .7 to .78 in breadth.

Philemon cockerelli, Sel.

(Plate III. fig. 12.)

Philemon cockerelli, Selater, *P. Z. S.* 1877, p. 104; *Gadow, Cat. Birds B. M.* ix. p. 278 (1884); *Nehrk. Kat. Eiersamml.* p. 83 (1899); *Sharpe, Hand-l.* v. p. 94 (1906).

Eggs of Cockerell's Friar-bird are of a long, somewhat pointed oval form, and slightly glossy. The ground-colour is pinkish-white or pale pinkish-brick-colour, finely spotted and blotched all over with light red and violet-grey. In one example the blotches form a heavy cap of purplish-red round the larger end. They much resemble eggs of *Tropidorhynchus subtuberosus*, but are longer in shape. They measure respectively 1.35 by .92, 1.4 by .9, 1.45 by .9, and 1.48 by .96.

Family MNIOTILTIDÆ.

Genus MNIOTILTA, Vieill.

Mniotilta varia (Linn.).

Mniotilta varia, Coues, *Birds N.-West*, p. 45 (1874); Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 180 (1874); Salv. & Godm. *Biol. Centr.-Amer., Aves*, i. p. 110 (1880); Sharpe, *Cat. Birds B. M.* x. p. 251 (1885); Nehrck. *Kat. Eiersamml.* p. 88 (1899); Sharpe, *Hand-l.* v. p. 96 (1906).

The eggs of the Black-and-White Creeping Warbler are of a regular oval shape and almost devoid of gloss. They are white, delicately speckled with lilac-red and lavender. In the specimens in the Collection the markings are very profuse round the broad end, where they form a well-defined zone. They measure from .65 to .73 in length, and from .51 to .54 in breadth.

Genus HELMINTHOTHERUS, Rafinesque.

Helminthotherus vermivorus (Gmel.).

(Plate III. fig. 1.)

Helmitherus vermivorus, Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 187 (1874).

Helminthotherus vermivorus, Salvin & Godm. *Biol. Centr.-Amer., Aves*, i. p. 112 (1880); Sharpe, *Cat. Birds B. M.* x. p. 230 (1885); Nehrck. *Kat. Eiersamml.* p. 87 (1899); Sharpe, *Hand-l.* v. p. 97 (1906).

A single egg of the Worm-eating Warbler in the Collection is of a wide oval form, slightly pointed towards one end, and somewhat glossy. The ground-colour is white very finely dotted with reddish-brown and lilac, the markings being most numerous round the larger end, where they form an irregular zone. It measures .63 by .5.

Genus **VERMIVORA**, *Swains.***Vermivora pinus** (*Linn.*).

Helminthophaga pinus, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 195 (1874); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 117 (1880).

Helminthophila pinus, *Sharpe, Cat. Birds B. M.* x. p. 237 (1885); *Nehrke. Kat. Eiersamml.* p. 88 (1899).

Vermivora pinus, *Sharpe, Hand-l.* v. p. 98 (1906).

Two eggs of the Blue-winged Warbler are of a more or less broad oval shape, slightly pointed at one end, and somewhat glossy. The ground-colour is white, and the purplish-red and lilac markings are mostly confined to the larger end, forming, in one example, an irregular cap. They measure respectively .58 by .49 and .62 by .46.

Salvin-Godman Coll.

Genus PARULA, Bonap.

Parula americana (Linn.).

(Plate III. figs. 4 & 5.)

Parula americana, Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 208 (1874); *Coues, Birds N.-West*, p. 47 (1874); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 119 (1880); *Sharpe, Cat. Birds B. M.* x. p. 256 (1885); *Nehrk. Kat. Eiersamml.* p. 88 (1899); *Sharpe, Hand-l.* v. p. 100 (1906).

Eggs of the Parula Warbler are of a pointed oval shape, with little or no gloss. They are white, finely speckled and blotched, chiefly at the broad end, with pale red, lilac, and lavender; and there are also a few markings of deep reddish-brown scattered about the shell. They measure from .66 to .69 in length, and from .48 to .5 in breadth.

Genus **DENDRÆCA**, Gray.**Dendræca æstiva** (Gmel.).

Sylvia æstiva, Thien. *Fortpflanz. ges. Vög.* tab. xx. figs. 12 A, 12 B (1845-54).

Dendræca æstiva, Ross, *Canad. Nat.* vii. p. 145 (1862); *id.*, *Nat. Hist. Review*, 1862, p. 280; *Salv. & Godm. Biol. Centr.-Amer.*, Aves, i. p. 124 (1880); *Sharpe, Cat. Birds B. M.* x. p. 273 (1885); *Nehrke. Kat. Eiersamml.* p. 88 (1899); *Sharpe, Hand-l.* v. p. 102 (1906).

Dendroica æstiva, Baird, *Brewer & Ridgw. N. Amer. Birds*, i. p. 222 (1874).

Eggs of the Yellow Warbler, or Summer Yellow-bird, are of a pointed oval shape and moderately glossy. They are greenish-white, spotted and blotched with two or more shades of brown and light purple or slaty-grey. The markings are sparse on the smaller half of the egg, but dense on the larger, where they often form a cap or a broad irregular zone. On two specimens in the Collection they are confined to a broad belt round the middle of the egg. Examples measure from .62 to .71 in length, and from .48 to .52 in breadth.

Eggs of the Chestnut-sided Warbler are of a pointed oval shape and very slightly glossy. They are white, marked, almost entirely at the broad end, with spots and small blotches of light reddish and various shades of brown, mixed with lavender or purplish-grey. The markings generally form a wreath or zone round the broader end of the egg, and are frequently heavy and confluent. Examples measure from .6 to .7 in length, and from .48 to .52 in breadth.

Dendroeca vigorsii (*Audub.*).

Dendroica pinus, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 268 (1874).

Dendroeca pinus, *Coues, Birds N.-West*, p. 69 (1874); *Sharpe, Cat. Birds B. M. x.* p. 323 (1885); *Nehrk. Kat. Eiersamml.* p. 89 (1899).

Dendroeca vigorsii, *Sharpe, Hand-l. v.* p. 109 (1906)

An egg of the Pine-Warbler resembles many of the eggs of *D. æstiva*. It measures .7 by .5.

1. North America (*Smiths. Inst.*). Crowley Bequest.

Dendroica discolor, Vieill.

Dendroica discolor, Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 276 (1874).

Dendroica discolor, Coues, *Birds N.-West*, p. 63 (1874); Salv. & Godm. *Biol. Centr.-Amer., Aves*, i. p. 142 (1881); Sharpe, *Cat. Birds B. M.* x. p. 307 (1885); Coues, *Auk*, 1888, p. 405; Nehrke, *Kat. Eiersamml.* p. 89 (1899); Sharpe, *Hand-l. v.* p. 110 (1906).

The eggs of the Prairie-Warbler vary from a narrow to a broad oval form and are slightly glossy. They are white, speckled, spotted and sometimes blotched, chiefly at the broad end, with reddish-brown, purplish-brown, and lavender or lilac. They measure from .62 to .67 in length, and from .46 to .51 in breadth.

4. North America (*Henshaw Coll.*). Salvin-Godman Coll.
3. Old Saybrook, Middlesex, Connecticut, 5th July (*J. N. Clark*). W. Radcliffe Saunders, Esq. [P.]

Genus *OPORORNIS*, Baird.

Oporornis formosa (Wils.).

(Plate IV. fig. 1.)

Oporornis formosus, Coues, *Birds N.-West*, p. 73 (1874); Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 293 (1874).

Oporornis formosa, Salv. & Godm. *Biol. Centr.-Amer., Aves*, i. p. 148 (1881); Sharpe, *Cat. Birds B. M.* x. p. 348 (1885); Nehrke, *Kat. Eiersamml.* p. 89 (1899); Sharpe, *Hand-l. v.* p. 111 (1906).

The eggs of the Kentucky Warbler are of a pointed, broad oval form and moderately glossy. They are white, speckled and spotted, rather densely at the broad end, with reddish-brown and lavender. A few larger markings, of the nature of blotches, are scattered over the shell, here and there. Specimens measure from .7 to .8 in length, and from .6 to .62 in breadth.

2. North America. Crowley Bequest.

Genus **SIURUS**, *Swains.***Siurus auricapillus** (*Linu.*).

(Plate IV. fig. 2.)

Seiurus aurocapillus, *Coues, Birds N.-West*, p. 70 (1874); *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 280 (1874).

Siurus auricapillus, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 144 (1881); *Sharpe, Cat. Birds B. M.* x. p. 339 (1885); *Nehrke. Kat. Eiersamml.* p. 89 (1899); *Sharpe, Hand-l.* v. p. 112 (1906).

The eggs of the Golden-crowned Water-Thrush are of a very broad and blunt oval shape and but very slightly glossy. They are white, spotted and blotched, more densely at the broad end where the markings are more or less confluent and form a cap, with pale rufous, reddish-brown, lilac-red and purplish-grey, all these colours being usually combined on one egg. They measure from .78 to .85 in length, and from .6 to .65 in breadth.

Geothlypis occidentalis, *Brewst.*

Geothlypis occidentalis, *Sharpe, Cat. Birds B. M.* x. p. 351 (1885); *Ridgw. Birds of North & Middle Amer.* ii. p. 668 (1902); *Sharpe, Hand-l.* v. p. 114 (1906).

An egg of the Western Yellow-throat closely resembles eggs of *G. trichas*, but is rather smaller. It measures .65 by .5.

- | | |
|------------------------------------|-----------------------------------|
| 1. Corpus Christi, Texas, 2nd May. | W. Radcliffe Saunders, Esq. [P.]. |
|------------------------------------|-----------------------------------|

Geothlypis cucullata (Lath.).

Geothlypis velata, *Sharpe, Cat. Birds B. M.* x. p. 363 (1885); *Scl. & Huds. Argent. Orn.* i. p. 20 (1888); *Nehr. Kat. Eiersamml.* p. 90 (1899); *von Ihering, Rev. Mus. Paulista*, iv. p. 203 (1900).
Geothlypis cucullata, *Sharpe, Hand-l.* v. p. 116 (1906).

Two eggs of the Veiled Wood-singer are of an ordinary oval shape and exhibit a small amount of gloss. They are white, spotted and blotched, almost entirely at the broad end where the markings form a confluent cap, with brownish-pink, deep purplish-red, and lilac. They measure respectively: .72 by .51; .7 by .52.

2. Argentine Republic.

Crowley Bequest.

Genus ICTERIA, Vieill.

Icteria viridis (Gmel.).

(Plate IV. fig. 7.)

Icteria virens, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 307 (1874).
Icteria viridis, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 157 (1881);
Sharpe, Cat. Birds B. M. x. p. 373 (1885); *Nehr. Kat. Eiersamml.* p. 90 (1899); *Sharpe, Hand-l.* v. p. 117 (1906).

The eggs of the Yellow-breasted Warbler are of a blunt oval form and exhibit a small amount of gloss. They are white, spotted and blotched with reddish-brown and lavender, the markings being larger and often confluent at the broad end, where they form an irregular zone or thin cap. Specimens measure from .81 to .91 in length, and from .6 to .7 in breadth.

Genus **GRANATELLUS**, Bonap.

Granatellus sallæi, Bonap.

Granatellus sallæi, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 161 (1881); *Sharpe, Cat. Birds B. M.* x. p. 371 (1885); *Nehr. Kat. Eiersamml.* p. 90 (1899); *Sharpe, Hand-l.* v. p. 118 (1906).

The eggs of Sallé's Warbler are of a regular oval form and devoid of gloss. They are white, very delicately speckled with blackish-brown, chiefly at the broad end, and in general appearance closely resemble certain species of *Vireo*. They measure .8 by .6.

- | | |
|---|---------------------|
| 1. Valladolid, Yucatan (<i>G. F. Gummer</i>). | Salvin-Godman Coll. |
| 2. Yucatan. | Crowley Bequest. |

Genus **WILSONIA**, Bonap.

Wilsonia mitrata (*Gmel.*).

Sylvia mitrata, *Thien. Fortpflanz. ges. Vög.* tab. xxii. fig. 4 (1845-54).
Myiodioctes mitratus, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 314 (1874); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 167 (1881);
Sharpe, Cat. Birds B. M. x. p. 437 (1885); *Nehr. Kat. Eiersamml.* p. 91 (1899).
Wilsonia mitrata, *Sharpe, Hand-l.* v. p. 118 (1906).

The eggs of the Hooded Warbler are of a pointed oval shape and slightly glossy. Four are white, sparingly speckled and spotted with rich purplish-red and lilac; in the fifth, which is a broader and shorter egg of rather a different type, the markings round the larger end are bolder and more confluent, taking the form of blotches. They measure respectively: .77 by .55; .73 by .53; .77 by .53; .71 by .57.

- | | |
|---|--------------------------------------|
| 1. North America. | W. Radcliffe Saunders, Esq.
[P.]. |
| 1. Old Saybrook, Middlesex, Connecticut, 30th May (<i>J. N. Clark</i>). | W. Radcliffe Saunders, Esq.
[P.]. |
| 3. Mount Carmel, Illinois (<i>R. Ridgway: Henshaw Coll.</i>). | Salvin-Godman Coll. |

Wilsonia chryseola, Ridgw.

Wilsonia chryseola, *Ridgw. Birds of North & Middle Amer.* ii. p. 714 (1902); *Sharpe, Hand-l.* v. p. 119 (1906).

An egg of Ridgway's Warbler is of a rather wide, pointed oval shape and slightly glossy; it is pure white, finely spotted all over the shell with light red and lilac, the markings being most numerous towards the larger end. It measures .6 by .48.

1. California (*R. Ridgway: Tristram Coll.*). Crowley Bequest.

Wilsonia canadensis (Linn.).

Sylvia canadensis, *Thien. Fortpflanz. ges. Vög.* tab. xxii. fig. v (1845-54).

Myiodioides canadensis, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 320 (1874); *Coues, Birds N.-West*, p. 80 (1874); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 166 (1881); *Sharpe, Cat. Birds B. M.* x. p. 432 (1885); *Nehr. Kat. Eiersamml.* p. 91 (1899).

Wilsonia canadensis, *Sharpe, Hand-l.* v. p. 119 (1906).

Four eggs of the Canadian Warbler are of a pointed oval shape and exhibit little or no gloss. They are of a yellowish-white, spotted and blotched with brownish-pink, reddish-brown, and lavender, the markings being confluent at the larger end and forming a dense cap or zone. They measure respectively: .76 by .56; .7 by .5; .7 by .48.

1. North America (*Nehrkorn Coll.*). Crowley Bequest.
3. North America (*Anderson: Tristram Coll.*). Crowley Bequest.

Genus SETOPHAGA, Swains.**Setophaga ruticilla (Linn.).**

Setophaga mitrata, *Thien. Fortpflanz. ges. Vög.* tab. xxix. fig. 11 (1845-54).

Setophaga ruticilla, *Ross, Canad. Nat.* vii. p. 145 (1862); *id., Nat. Hist. Rev.* 1862, p. 280; *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 323 (1874); *Coues, Birds Colorado Valley*, p. 337 (1878); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 178 (1881); *Sharpe, Cat. Birds B. M.* x. p. 411 (1885); *Nehr. Kat. Eiersamml.* p. 90 (1899); *Sharpe, Hand-l.* v. p. 120 (1906).

The eggs of the American Redstart are mostly of a pointed oval form and exhibit a small amount of gloss. They are somewhat similar to the eggs of *Dendroica aestiva*, but the ground-colour is generally white, instead of greenish-white, and the brown markings have usually a decided rufous tinge. Specimens measure from .6 to .7 in length, and from .48 to .52 in breadth.

Genus **MYIOBORUS**, *Baird*.

Myioborus verticalis (*Lafresn. & d'Orb.*).

Setophaga verticalis, *Scl. & Salv. P. Z. S.* 1879, p. 495; *Sharpe, Cat. Birds B. M. x.* p. 420 (1885).

Myioborus verticalis, *Sharpe, Hand-l. v.* p. 120 (1906).

The eggs of the Chestnut-capped Wood-singer are of a narrow oval shape and almost devoid of gloss. They are white, speckled and spotted with reddish-brown and lavender or lilac, the markings being dense at the broad end, where they assume the form of a broad zone. Six examples measure respectively: .67 by .51; .7 by .5; .75 by .5; .73 by .51; .71 by .5; .68 by .5.

Myioborus aurantiacus (*Baird*).

Setophaga aurantiaca, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 182 (1881); *Sharpe, Cat. Birds B. M. x.* p. 421 (1885).

Myioborus aurantiacus, *Sharpe, Hand-l. v.* p. 121 (1906).

Three eggs of the Orange-bellied Wood-singer are of a regular oval form, slightly pointed towards one end, and exhibit very little gloss. They are white, with numerous small spots and blotches of light red, brownish-red, and lilac, mostly concentrated and more or less confluent round the large end, forming an irregular cap or zone. They measure respectively: .7 by .52; .68 by .5; .69 by .49.

| 1. Cerchi, Costa Rica, 25th May. | Mr. C. F. Underwood [C.]. |
| 2. Cerchi, 3rd May. | Mr. C. F. Underwood [C.]. |

Myioborus torquatus (*Baird*).

Setophaga torquata, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 183 (1881); *Sharpe, Cat. Birds B. M. x.* p. 424 (1885).

Myioborus torquatus, *Sharpe, Hand-l. v.* p. 121 (1906).

An egg of the Banded Wood-singer is of a regular oval shape, slightly pointed towards one end and almost devoid of gloss. It is white, blotched at the larger end with yellowish-brown and with reddish-brown and lilac spots, forming together a distinct though rather irregular cap; there are also a few small reddish-brown spots scattered over the rest of the shell. It measures .75 by .55.

1. Rancho Redondo, Costa Rica, Mr. C. F. Underwood [C.].
25th May.

Myioborus chrysops (*Salv.*).

Setophaga chrysops, *Scl. & Salv. P. Z. S.* 1879, p. 495; *Sharpe, Cat. Birds B. M.* x. p. 427 (1885); *Nehrke. Kat. Eiersamml.* p. 91 (1899).

Myioborus chrysops, *Sharpe, Hand-l.* v. p. 121 (1906).

Eggs of the Golden-faced Wood-singer appear to resemble the eggs of *M. verticalis* very closely. Four examples measure respectively: .78 by .55; .75 by .52; .79 by .52; .8 by .52.

2. Frontino, Antioquia, U.S. Salvin-Godman Coll.
Colombia (*T. K. Salmon*).
2. Frontino (*T. K. S.*) Salvin-Godman Coll.

Genus **MYIOTHLYPIS**, *Cab.*

Myiothlypis nigricristatus (*Lafresn.*).

(Plate IV. figs. 3 & 4.)

Basileuterus nigricristatus, *Scl. & Salv. P. Z. S.* 1879, p. 494; *Sharpe, Cat. Birds B. M.* x. p. 380 (1885); *Nehrke. Kat. Eiersamml.* p. 90 (1899).

Myiothlypis nigricristatus, *Sharpe, Hand-l.* v. p. 122 (1906).

Two eggs of the Black-capped Wood-singer are of a pointed oval form and devoid of gloss. They are white, speckled and spotted all over with reddish-brown and lilac, and one specimen is marked, in addition, with a large pale rufous blotch about the larger end. They measure respectively: .87 by .6; .79 by .6.

2. Sta. Elena, Antioquia, U.S. Salvin-Godman Coll.
Colombia (*T. K. Salmon*).

Genus **BASILEUTERUS**, *Cab.*

Basileuterus coronatus (*Tschudi*).

Basileuterus coronatus, *Scl. & Salv. P. Z. S.* 1879, p. 494; *Sharpe, Cat. Birds B. M.* x. p. 390 (1885); *id.*, *Hand-l.* v. p. 124 (1906).

Two eggs of the Crowned Wood-singer are very similar to those of *B. nigricristatus*, but the markings are coarser and more dense,

and neither of them exhibits any large blotch. They measure respectively: .78 by .6; .85 by .58.

2. Sta. Elena, Antioquia, U.S. Salvin-Godman Coll.
Colombia (*T. K. Salmon*).

Basileuterus leucopygius*, *Scl. & Salv.

Basileuterus leucopygius, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 172 (1881); *Sharpe, Cat. Birds B. M.* x. p. 402 (1885); *id., Hand-l.* v. p. 127 (1906).

Two eggs of the White-rumped Wood-singer are of a regular oval form and slightly glossy. They are white, speckled and spotted, chiefly round the larger end, with reddish-brown and violet-grey. They measure respectively .8 by .56 and .83 by .58.

2. Carrillo, Costa Rica, 7th May. Mr. C. F. Underwood [C.].

Family MOTACILLIDÆ.

Genus MOTACILLA, *Linn.*

Motacilla lugubris*, *Temm.

Motacilla yarrellii, *Thien. Fortpflanz. ges. Vög.* tab. xxv. fig. 2, a-c (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 163, pl. xli. figs. i & ii (1856); *Seeböhm, Brit. Birds*, ii. p. 194, pl. 14 (1884); *id., Eggs of Brit. Birds*, p. 259, pl. 58. figs. 17 & 18 (1896).

Motacilla lugubris, *Dresser, Birds Eur.* iii. p. 239 (1875); *Sharpe, Cat. Birds B. M.* x. p. 460 (1885); *Dresser, Man. Pal. Birds*, pt. i. p. 197 (1902); *Sharpe, Hand-l.* v. p. 137 (1906).

Motacilla alba lugubris, *Hartert, Vög. Pal. Faun.* pt. iii. p. 301 (1905).

The eggs of the Pied Wagtail are mostly of a broad oval form, and they are moderately glossy. They are white, greyish-white, or very pale bluish-white, densely speckled or mottled with greyish-brown and underlying lavender-grey. Some specimens are somewhat darker than others, but, as a rule, the eggs of this Wagtail are very uniform. A few examples exhibit one or two short black hair-lines at the broad end. The eggs measure from .73 to .87 in length, and from .57 to .63 in breadth.

Motacilla alba, Linn.

(Plate IV. fig. 16.)

Motacilla alba, *Thien. Fortpflanz. ges. Vög.* tab. xxv. fig. 1, a-c (1845-54); *Baedeker, Eier Eur. Vög.* tab. 35. fig. 12 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 165, pl. xli. figs. iii & iv (1856); *Dresser, Birds Eur.* iii. p. 233 (1875); *Seebohm & Harvie-Brown, Ibis*, 1876, p. 125; *Seebohm, Ibis*, 1878, p. 343; *id.*, *Brit. Birds*, ii. p. 199, pl. 14 (1884); *Sharpe, Cat. Birds B. M.* x. p. 464 (1885); *Seebohm, Eggs of Brit. Birds*, p. 260, pl. 58. figs. 19 & 20 (1896); *Dresser, Man. Pal. Birds*, pt. i. p. 200 (1902); *Sharpe, Hand-l.* v. p. 137 (1906).
Motacilla alba alba, *Hartert, Vög. Pal. Faun.* pt. iii. p. 302 (1905).

The majority of the eggs of the White Wagtail very closely resemble those of the Pied Wagtail, but the ground-colour is more generally of a decided bluish tinge. Some specimens, however, differ in having the markings coarser and of an olive-brown colour. A single specimen in the Collection (fig. 16) is almost unmarked except at the broad end, where there is a dense sooty-black cap,

shading off into dark smoky brown. Examples measure from ·71 to ·85 in length, and from ·57 to ·64 in breadth.

***Motacilla maderaspatensis*, Gmel.**

(Plate IV. figs. 11 & 12.)

Motacilla maderaspatensis, *Legge, Birds Ceylon*, p. 607 (1879); *Sharpe, Cat. Birds B. M.* x. p. 490 (1885); *Oates, Fauna Brit. Ind., Birds*, ii. p. 291 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 202 (1890); *Osmaston, Journ. Bomb. Nat. Hist. Soc.* xi. p. 66 (1897); *Nehr k. Kat. Eiersamml.* p. 91 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 199 (1902); *id., Ibis*, 1904, pl. x. figs. 3 & 4; *Hartert, Vög. Pal. Faun.* pt. iii. p. 286, note (1905); *Sharpe, Hand-l.* v. p. 140 (1906).

The eggs of the Large Pied Wagtail are of an oval shape and moderately glossy. They are greenish-white, pale grey or pale brown, marked with pale umber-brown and lavender-grey. Those eggs which have a white ground appear to be generally marked with more or less well-defined spots and blotches somewhat sparingly distributed. Others with a grey or brown ground are, for the most part, densely streaked and mottled. Between these two types many intermediate varieties occur. Specimens measure from .8 to 1.0 in length, and from .59 to .7 in breadth.

Eiersamml.* p. 91 (1899); *Haagner, Ibis*, 1901, p. 15; *Sharpe, Hand-l.* v. p. 140 (1906).

Eggs of the Cape Wagtail are of a pointed oval form and moderately glossy. They are cream-colour or greyish-white, freckled, especially at the broad end, with pale grey or light brown. On some eggs the markings are so faint that they are hardly noticeable. Specimens measure from .76 to .85 in length, and from .58 to .61 in breadth.

Eggs of the Madagasear Wagtail vary from a broad to a narrow oval shape and are very glossy. The eggs in the Collection are of three types. In one the ground-colour is pale greyish-green, and the whole surface of the shell is densely mottled with greyish-brown and lavender. In another, the eggs are dull white, blotched and mottled with umber-brown and lavender. In the third type, the egg is cream-colour, densely mottled with purplish-brown and lilac-grey. They vary from .71 to .8 in length, and from .57 to .63 in breadth.

Pal. Birds, pt. i. p. 202 (1902) [part.].

Motacilla boarula boarula, *Hartert, Vög. Pal. Faun.* pt. iii. p. 298 (1905).

Eggs of the Grey Wagtail are of a broad pointed oval shape and very glossy. The commonest type of egg is pale grey or bluish-white or sometimes cream-colour, mottled all over with light brown of various shades. Another type, which appears to be much less common, is white or greyish-white, mottled with umber-brown and lavender-grey. In this type the markings are most dense on the broad end, where they form a more or less confluent cap. A few examples in a large series have one or two black hair-lines at the broad end of the egg. Specimens measure from .7 to .8 in length, and from .54 to .6 in breadth.

Motacilla boarula melanope, *Hartert, Vög. Pal. Faun.* pt. iii. p. 300 (1905).

Eggs of the Eastern Grey Wagtail appear to be of two types: the first resembles that of the Common Grey Wagtail, having a cream-coloured or whitish ground mottled, sometimes very faintly, with yellowish-brown. A specimen taken in Kashmir represents a second type, in which the ground-colour is pinkish, mottled with a darker shade of the same. *Taczanowski* states (*op. cit.*) that some eggs of this species taken in Siberia are tinged with rose-colour. No such tint is observable in any European egg of the Western form.

Motacilla citreola, Pall.

Budytes citreola, *Tacz. J. f. O.* 1873, p. 82, taf. ii. fig. 20; *Seebohm & Harvie-Brown*, *Ibis*, 1876, p. 123; *Tacz. Faune Orn. Sibér. Orient.* p. 387 (1891).

Motacilla citreola, *Dresser*, *Birds Eur.* iii. pp 245, 249 (1875); *Bree*, *Birds Eur.* 2nd ed. iii. p. 91, pl. (1875); *Sharpe*, *Cat. Birds B. M.* x. p. 503 (1885); *Oates*, *Fauna Brit. Ind.*, *Birds*, ii. p. 298 (1890); *Nehrk. Kat. Eiersamml.* p. 92 (1899); *Dresser*, *Man. Pal. Birds*, pt. i. p. 203 (1902); *Sharpe*, *Hand-l.* v. p. 141 (1906).

Motacilla citreola citreola, *Hartert*, *Vög. Pal. Faun.* pt. iii. p. 296 (1905).

The eggs of the Yellow-headed Wagtail are so similar in general character to those of *M. boarula* of the commoner type, that they cannot be separated from them. They measure from .72 to .82 in length, and from .56 to .6 in breadth. A very small example measures only .66 by .5, and is one of a clutch of six eggs.

Motacilla melanogrisea, *Sharpe, Hand-l.* v. p. 143 (1906).

Two eggs of Homeyer's Black-headed Wagtail are much like those of *M. flava* and *M. citreola*, being of a pointed oval form and somewhat glossy, with the ground-colour yellowish-white, indistinctly mottled all over with pale yellowish-brown. Both examples are marked with an irregular black hair-line at the larger end. They measure respectively $\cdot 8$ by $\cdot 59$ and $\cdot 81$ by $\cdot 58$.

2. Altai Mountains (*Nehr. Korn Coll.*). Crowley Bequest.

Genus **DENDRANTHUS**, *Blyth*.**Dendranthus indicus** (*Gmel.*).

(Plate IV. fig. 22.)

Limoniidromus indicus, *Sharpe, Cat. Birds B. M.* x. p. 532 (1885); *Tacz. Faune Orn. Sibér. Orient.* p. 390 (1891); *Nchrk. Kat. Eiersamml.* p. 92 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 209 (1902).
Dendranthus indicus, *Sharpe, Hand-l.* v. p. 144 (1906).
Dendronanthus indica, *Hartert, Vög. Pal. Faun.* pt. iii. p. 309 (1905).

Two eggs of the Forest Wagtail are of an ordinary oval shape and perfectly devoid of gloss. They are grey with a purple tinge, marked with spots and small blotches of umber-brown and underlying lilac-grey. They measure respectively .8 by .58 and .77 by .57.

2. Ussuri River, E. Siberia (*Dörries*: Crowley Bequest.
Nchrkorn Coll.).

Genus **ANTHUS**, *Bechst.***Anthus chloris**, *Licht.*

(Plate V. figs. 1 & 2.)

Anthus chloris, *Sharpe, Cat. Birds B. M.* x. p. 539 (1885); *Stark, Fauna S. Afr.*, *Birds*, i. p. 243 (1900); *Shelley, Birds Afr.* ii. p. 295 (1909); *Sharpe, Hand-l.* v. p. 144 (1906).

Three eggs of the Small Yellow-tufted Pipit are of a somewhat pointed oval form and almost devoid of gloss. The ground-colour is white or yellowish-white, densely speckled and spotted all over with dull lavender-grey and yellowish-brown, the marking being somewhat more dense round the larger end. They measure respectively: .9 by .55; .82 by .6; .82 by .59.

3. South Africa (*Noakes*). Crowley Bequest.

Anthus trivialis, *Linn.*

Anthus arboreus, *Thien. Fortypflanz. ges. Vög.* tab. xxv. fig. 7, *a-e* (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 171, pl. xliii. (1856); *Seebohm, Brit. Birds*, ii. p. 219, pl. 14 (1884); *id., Eggs of Brit. Birds*, p. 263, pl. 58 A. figs. 5-8 (1896).

Dendronanthus arboreus, *Baedeker, Eier Eur. Vög.* tab. 38. fig. 8 (1855-63).

Anthus trivialis, *Dresser, Birds Eur.* iii. p. 309 (1874); *Tristr. Fauna & Flora Palest.* p. 56 (1884); *Sharpe, Cat. Birds B. M.* x. p. 543 (1885); *Dresser, Man. Pal. Birds*, pt. i. p. 211 (1902); *Newton, Ootheca Wolleyana*, p. 366 (1902); *Sharpe, Hand-l.* v. p. 145 (1906).
Anthus trivialis trivialis, *Hartert, Vög. Pal. Faun.* pt. iii. p. 272 (1905).

The eggs of the Tree-Pipit are mostly of a broad, pointed oval shape, but occasionally they are rounded at the smaller end. They

exhibit a large amount of gloss. They are extremely variable in colour, and there are at least five types, all of common occurrence. Eggs of the first type are greyish-white, very densely freckled all over with greyish-brown; in a second they are pinkish-white, densely freckled all over with reddish-brown; in a third they are pale brown or greenish-white, spotted and clouded with two or more shades of rich umber-brown and purplish-brown; in a fourth they are cream-colour, clouded with lilac and spotted and blotched with purplish-red; and in a fifth they are pale purplish-grey, spotted and blotched, especially at the broad end, with deep chocolate-brown and underlying lavender. Intermediate examples also occur. Specimens measure from .7 to .9 in length, and from .6 to .65 in breadth.

Anthus maculatus, Jard.

(Plate V. fig. 4.)

Pipastes agilis, *Tacz. J. f. O.* 1873, p. 84, taf. ii. figs. 22, 23, 24.*Anthus maculatus*, *Sharpe, Cat. Birds B. M.* x. p. 547 (1885); *Seebohm, Birds Japan. Emp.* p. 115 (1890); *Oates, Fauna Brit. Ind., Birds*, ii. p. 304 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 209 (1890); *Nehrke, Kat. Eiersamml.* p. 92 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 212 (1902); *Sharpe, Hand-l.* v. p. 145 (1906).*Pipastes maculatus*, *Tacz. Faune Orn. Sibér. Orient.* p. 391 (1891).*Anthus trivialis maculatus*, *Hartert, Vög. Pal. Faun.* pt. iii. p. 273 (1905).

Eggs of the Eastern Tree-Pipit, of which there is a large series in the Collection, are as a rule pretty uniform in colour, and of a very broad oval shape, perfectly devoid of gloss. They are cream-coloured, smeared and clouded with pale lilac-red, over which are laid blotches of dull reddish-brown and, in the majority of the specimens, spots, lines, and hieroglyphics of very deep purplish-red. They are not unlike some of the eggs of *A. trivialis*. Three sets of eggs from Fujiyama are, however, of a very different type. In two sets the ground-colour is yellowish-white, very finely and densely spotted all over with chocolate-brown; in the third set the ground-colour is whitish or greenish-white, and equally finely marked with purplish-grey and lavender. They measure from .75 to .84 in length, and from .6 to .65 in breadth.

Anthus nilghiriensis, Sharpe.

(Plate V. fig. 5.)

Anthus nilghiriensis, *Sharpe, Cat. Birds B. M.* x. p. 550 (1885); *Oates, Fauna Brit. Ind., Birds*, ii. p. 305 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 211 (1890); *Sharpe, Hand-l.* v. p. 145 (1906).

The eggs of the Nilghiri Pipit are of a somewhat narrow oval shape and moderately glossy. The five specimens in the Collection vary considerably. Three examples are greyish-white, very densely

mottled with brown and purplish-grey; another egg is cream-coloured, densely mottled with pale reddish-brown and purplish-grey; and a fifth is pale buff, densely mottled with pale brown. They measure respectively: $\cdot 85$ by $\cdot 62$; $\cdot 88$ by $\cdot 61$; $\cdot 8$ by $\cdot 6$; $\cdot 8$ by 62 ; $\cdot 82$ by $\cdot 57$.

4. Neddivatam, Nilghiri Hills, 6500 feet, May (*W. Davison*). Hume Coll.
1. Nilghiri Hills. Hume Coll.

Anthus brachyurus, *Sunder.*

(Plate V. fig. 3.)

Anthus brachyurus, *Gurney, Ibis*, 1863, p. 327; *Sharpe, ed. Layard, Birds S. Africa*, p. 539 (1875-84); *id.*, *Cat. Birds B. M.* x. p. 551 (1885); *Stark, Fauna S. Afr., Birds*, i. p. 248 (1900); *Shelley, Birds Afr.* ii. p. 303 (1900); *Sharpe, Hand-l.* v. p. 145 (1906).

The eggs of the Cape Short-tailed Pipit are of a blunt oval shape and possess very little gloss. They are white, freckled with pale brown and grey. The markings form an irregular zone round the broad end of the egg and are sparingly distributed elsewhere. Three examples measure respectively: $\cdot 65$ by $\cdot 52$; $\cdot 68$ by $\cdot 52$; $\cdot 67$ by $\cdot 52$.

3. Natal. Dr. Gneinzus [C.].

Anthus vaalensis, *Shelley.*

(Plate V. fig. 6.)

Anthus gouldi, *Gurney, Ibis*, 1860, p. 208.
Anthus leucophrys, *Layard, Ibis*, 1869, p. 368.
Anthus pyrrhonotus, *Sharpe (nec Vieill.)*, *ed. Layard, Birds S. Africa*, p. 537 (1875-84) [pt.]; *Butler, Feilden & Reid, Zool.* 1882, p. 336; *Sharpe, Cat. Birds B. M.* x. p. 555 (1885) [pt.]; *Stark, Fauna S. Afr., Birds*, i. p. 250 (1900) [pt.].
Anthus vaalensis, *Shelley, Birds Afr.* ii. p. 311 (1900); *Sharpe, Hand-l.* v. p. 146 (1906).

Eggs of the Tawny Plain-backed Pipit vary from an ordinary, somewhat pointed oval shape to a broad, blunt oval, and are very slightly glossy. They are whitish or cream-coloured, more or less densely speckled and mottled all over, or sometimes blotched, with brown and underlying lavender. Two eggs from Lindley differ in having all the surface-markings of a light rusty-brown or sienna. Examples measure from $\cdot 78$ to $\cdot 85$ in length, and from $\cdot 58$ to $\cdot 67$ in breadth.

Anthus sordidus, Rüpp.

(Plate V. figs. 7 & 8.)

Anthus sordidus, *Sharpe, Cat. Birds B. M.* x. p. 560 (1835) [part.];
Nehrke, Kat. Eiersamml. p. 92 (1899); *Shelley, Birds Afr.* ii. p. 314
 (1900); *Sharpe, Hand-l.* v. p. 146 (1903).

The eggs of the Dingy Rock-Pipit are of a blunt oval form, approaching the elliptical, and are but very slightly glossed. They are white, thickly mottled and blotched with deep umber-brown and underlying purplish-grey. The markings are very evenly distributed over the entire surface of the egg. Four examples measure respectively: .9 by .67; .9 by .66; .89 by .65; .92 by .67.

Anthus cockburniæ, Oates.

(Plate V. fig. 9.)

Anthus sordidus, *Sharpe (nec Rüpp.)*, *Cat. Birds B. M.* x. p. 560 (1885)
 [part.]; *Oates, ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 212 (1890).
Anthus cockburniæ, *Oates, Fauna Brit. Ind., Birds*, ii. p. 305 (1890);
Sharpe, Hand-l. v. p. 147 (1903).

Three eggs of the Rufous Rock-Pipit closely resemble those of *A. sordidus*; the fourth, as shown in the Plate, is of quite a different type, the ground-colour being white rather sparingly marked with small blotches and spots of purplish-brown and lilac-grey, the markings being most numerous round the large end, where they form an irregular zone. They measure respectively: .81 by .61; .87 by .62; .89 by .65; .92 by .64.

4. Nilghiri Hills, S. India (*Miss Cockburn*). Hume Coll.

Anthus jerdoni, Finsch.

Anthus richardi, Vieill.

- Anthus richardi*, *Thien. Fortpflanz. ges. Vög.* tab. xxv. fig. 14, *a, b* (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 175, pl. xlv. fig. iv (1856); *Dybowski, J. f. O.* 1868, p. 334; *Dresser, Birds Eur.* iii. p. 325 (1874); *Seebohm, Brit. Birds*, ii. p. 233, pl. 14 (1884); *Sharpe, Cat. Birds B. M.* x. p. 564 (1885); *Oates, Fauna Brit. Ind., Birds*, ii. p. 307 (1890); *Tacz. Faune Orn. Sibér. Orient.* p. 395 (1891); *Seebohm, Eggs of Brit. Birds*, p. 266, pl. 58 A. fig. 4 (1896); *Nehrk. Kat. Eiersamm.* p. 92 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 219 (1902); *Sharpe, Hand-l.* v. p. 147 (1906).
- Corydalla richardi*, *Baedecker, Eier Eur. Vög.* tab. 35. fig. 1 (1855-63); *Tacz. J. f. O.* 1873, p. 83, tab. ii. fig. 21.
- Anthus richardi richardi*, *Hartert, Vög. Pal. Faun.* pt. iii. p. 265 (1905).

Eggs of Richard's Pipit are almost elliptical in shape, the two ends being closely alike in colour, and moderately glossy. They are greenish-white or grey, profusely mottled with brown and underlying lavender-grey. Eight examples measure from .82 to .92 in length, and from .65 to .68 in breadth.

Four examples, forming a clutch taken by Mr. Rickett, are smaller, and instead of being densely mottled are distinctly spotted and blotched. They measure .8 by .6.

3. Darasun, Dauria, June (*Dybowski: Crowley Bequest.*

(Plate V. fig. 15.)

- Corydalla striolata*, *Leyge, Birds Ceylon*, p. 628 (1879).
- Anthus striolatus*, *Sharpe, Cat. Birds B. M.* x. p. 568 (1885); *Oates, Fauna Brit. Ind., Birds*, ii. p. 308 (1890); *Sharpe, Hand-l.* v. p. 147 (1906).

The two eggs of Blyth's Pipit are of a blunt oval shape and very glossy. They are creamy-white, densely and finely freckled with yellowish-brown and very pale underlying lavender. They measure respectively: .85 by .64; .84 by .63.

2. Nilghiri Hills, S. India, 16th May. *Hume Coll.*

Anthus campestris (Linn.).

- Anthus campestris*, *Thien. Fortpflanz. ges. Vög.* tab. xxv. fig. 13, *a-c* (1845-54); *Dresser, Birds Eur.* iii. p. 317 (1874); *Seebohm, Brit. Birds*, ii. p. 239, pl. 14 (1884); *Sharpe, Cat. Birds B. M.* x. p. 569 (1885); *Seebohm, Eggs of Brit. Birds*, p. 267 (1896); *Nehrk. Kat. Eiersamm.* p. 92 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 218 (1902); *Sharpe, Hand-l.* v. p. 147 (1906).

Corydalla campestris, *Baedecker, Eier Eur. Vög.* tab. 35. fig. 2 (1855-63).

Anthus rufescens, *Salvin, Ibis*, 1859, p. 310.

Agrodromas campestris, *Saunders, Ibis*, 1871, p. 216.

Anthus campestris campestris, *Hartert, Vög. Pal. Faun.* pt. iii. p. 267 (1905).

The eggs of the Tawny Pipit are generally of a broad oval form, frequently pointed, sometimes blunt, and many specimens are highly glossy. The ground-colour varies from white to pale greenish- or greyish-white. The markings are of two general types. In one type, the egg is thickly marked with fine distinct and roundish dots of purplish-brown and underlying lavender. In the second type, the surface is streaked and blotched, rather coarsely, with umber-brown or reddish-brown and underlying lavender or purplish-grey. These are the two extreme types, and intermediate forms between them are of common occurrence. Specimens measure from .78 to .93 in length, and from .58 to .7 in breadth.

Anthus rufulus, Vieill.

(Plate V. figs. 10-12.)

Corydalla rufula, Legge, *Birds Ceylon*, p. 625 (1879).

Anthus caffer, Butler, Feilden & Reid, *Zool.* 1882, p. 335.

Anthus rufulus, Sharpe, *Cat. Birds B. M.* x. p. 574 (1885); *Oates, Fauna Brit. Ind.*, *Birds*, ii. p. 308 (1890); *id.*, ed. Hume, *Nests & Eggs Ind. Birds*, ii. p. 213 (1890); *Stark, Fauna S. Afr.*, *Birds*, i. p. 251 (1900); *Shelley, Birds Afr.* ii. p. 319 (1900); *Sharpe, Hand-l.* v. p. 148 (1906).

The eggs of the Small Rufous Pipit vary in form from a narrow pointed to a broad oval, and exhibit a small amount of gloss. They are white or greyish, marked in various ways with different tints of brown, reddish-brown, purplish-red, and underlying lavender or lilac. In many specimens the markings are all small and distinct; in others they are large and blotchy, and between these extremes many variations of pattern occur, but in every case a large amount of the ground-colour remains visible. The markings are often larger and closer together at the broad end than elsewhere, but they seldom form any well-defined cap. Specimens measure from .75 to .86 in length, and from .57 to .63 in breadth.

The eggs of the Meadow-Pipit are, for the most part, of a pointed oval shape and moderately glossy. The ground-colour varies from greyish- or brownish-white to pale stone-colour and sometimes it is pale blue. The markings on the majority of the eggs are of various shades of brown and underlying lavender or purplish-grey. On some specimens they are very dense and form a confluent mass, concealing nearly the whole of the ground-colour; and on others they are comparatively sparse and separate, permitting quite half of the ground-colour to be seen. Some examples are almost uniformly of a stone-colour, marked with a few spots and fine hair-lines of dark brown or black; others are very faintly mottled all over with minute streaks and dots. A clutch of five eggs taken at Seasalter, Faversham, are very abnormal in coloration. They are almost uniform pale blue, with a few spots, blotches, or hair-streaks of yellowish-brown, purple-brown, and lilac-grey, mostly confined to

the larger end. Specimens measure from .75 to .85 in length, and from .53 to .63 in breadth.

The eggs of the Red-throated Pipit appear to be as varied as those of *A. trivialis*, and they bear a close general resemblance to them and may be divided into the same number of types. Some of the eggs also resemble those of *A. pratensis*. They measure from .7 to .83 in length, and from .54 to .63 in breadth.

Anthus roseatus, *Hartert, Vög. Pal. Faun.* pt. iii. p. 279 (1905).

An egg of Hodgson's Pipit, taken by Mandelli, is of a narrow oval form and almost devoid of gloss. It is greyish-white, thickly freckled all over with pale brown. It measures $\cdot 85$ by $\cdot 6$.

Three eggs in the Crowley Collection are greyish-white, thickly mottled all over with dark brown or chocolate-brown. They measure respectively $\cdot 8$ by $\cdot 6$; $\cdot 8$ by $\cdot 58$; $\cdot 79$ by $\cdot 58$.

Anthus berthelotii berthelotii, *Hartert, Vög. Pal. Faun.* pt. iii. p. 270 (1905).

Eggs of the Canarian Pipit are of a regular oval form and have little or no gloss. They vary greatly in colour and markings. The eggs of one clutch are greyish-white, mottled with pale greyish-brown and lavender; those of a second clutch are white, spotted and blotched with pale umber-brown and lavender; a third type has the ground-colour creamy-white thickly mottled with umber-brown; a fourth has the markings purplish-brown or grey. The markings are often denser at the broad end, where they form a zone. Examples measure from $\cdot 75$ to $\cdot 82$ in length, and from $\cdot 55$ to $\cdot 6$ in breadth.

(1885); *Seebohm, Eggs of Brit. Birds*, p. 267, pl. 58 A. fig. 14 (1896); *Dresser, Man. Pal. Birds*, pt. i. p. 216 (1902) [part.]; *Sharpe, Hand-l. v.* p. 149 (1906).

Anthus spinoletta obscura, *Hartert, Vög. Pal. Faun.* pt. iii. p. 283 (1905).

The eggs of the Rock-Pipit are of a pointed oval shape and exhibit a moderate amount of gloss. The ground-colour varies from greyish-white to very pale greyish-green, but is often almost entirely concealed from view by the markings, which consist of a profusion of small blotches, streaks, and spots of olive-brown in some eggs, and rufous-brown or plain brown in others. The density of the markings varies considerably, some eggs being nearly covered by them, and some being more distinctly marked with small blotches which allow a considerable part of the ground to be seen. On many specimens there are a few black spots and lines at the broad end. Examples measure from .8 to .95 in length, and from .6 to .66 in breadth.

The eggs of the Cachila Pipit are in most instances inseparable

from those of *A. obscurus*, but there appear to be some types which do not occur among the eggs of that species. Examples from Uruguay are greyish-white, speckled with pale yellowish-brown and lavender; while those from the Argentine Republic are cream-colour, speckled and blotched with brown and lavender, quite half of the ground-colour remaining visible. Specimens measure from .76 to .95 in length, and from .58 to .69 in breadth.

The eggs of the Petchora Pipit are of a narrow pointed oval shape and but very slightly glossy. The clutches in the Collection vary considerably. The eggs of two clutches are cream-colour, profusely mottled with brown, to such an extent that in some specimens hardly any portion of the ground-colour is visible. The markings form a confluent cap at the broad end. The eggs of a third clutch are pale greyish- or purplish-white, very evenly blotched all over with purplish-brown and lavender. Specimens measure from .8 to .9 in length, and from .57 to .6 in breadth.

Anthus novæ-zealandiæ (*Gmel.*).

(Plate V. figs. 16 & 17.)

Anthus novæ-zealandiæ, *Potts, Trans. New Zeal. Inst.* ii. p. 61 (1869); iii. p. 76 (1870); *Sharpe, Cat. Birds B. M.* x. p. 616 (1885); *Buller, Birds New Zeal.* 2nd ed. i. p. 63 (1888); *Nehrke, Kat. Eiersamml.* p. 93 (1899); *Sharpe, Hand-l.* v. p. 151 (1906).

Eggs of the New Zealand Pipit are of an ordinary oval shape and rather highly glossy. They are greyish-white, profusely mottled or spotted with brown, especially round the broad end, where a wide confluent zone is sometimes formed. They measure from .88 to .92 in length, and from .62 to .69 in breadth.

Anthus steindachneri, *Reischek, Tr. N. Z. Inst.* xxi. p. 388 (1889); *Sharpe, Bull. B. O. C.* xiii. no. xcvii. p. 59 (1903); *id. Hand-l.* v. p. 151 (1906).

Two eggs of the Antipodes Island Pipit, in a very broken condition, appear to have been of a rather long oval shape and are very slightly glossed. The ground-colour is greyish-white, finely mottled

and clouded all over with greyish-brown; one of the eggs has a dark hair-line at the larger end.

Genus **OREOCORYS**, Sharpe.

Oreocorys sylvanus (Hodgs.).

(Plate VI. figs. 2 & 3.)

Oreocorys sylvanus, Sharpe, *Cat. Birds B. M.* x. p. 622 (1885); Oates, *Fauna Brit. Ind., Birds*, ii. p. 313 (1890); *id.*, ed. Hume, *Nests & Eggs Ind. Birds*, ii. p. 217 (1890); Sharpe, *Hand-l.* v. p. 152 (1906).

The eggs of the Upland Pipit are of a broad oval shape and moderately glossy. They are purplish-white, profusely speckled and spotted with reddish- or purplish-brown and underlying dark purplish-grey or lavender. The markings, though dense everywhere, are very crowded together at the broad end and form a confluent cap or zone. Specimens measure from .82 to .93 in length, and from .63 to .72 in breadth.

The eggs of the Cape Long-clawed Pipit are of a very blunt oval shape and slightly glossy. The eggs of one clutch in the Collection are cream-colour, profusely mottled and streaked all over with lilac-red and pale lavender. Those of two other clutches are dull white, spotted and blotched with pale brown and underlying dull purple. They measure from .92 to 1.0 in length, and from .68 to .72 in breadth.

Macronyx striolatus, *Sharpe, ed. Layard, Birds S. Africa*, p. 532 (1875-84)

The eggs of the Yellow-bellied Long-clawed Pipit are of a blunt oval shape and moderately glossy. The eggs of one clutch are white, thickly marked all over with spots and small blotches of reddish-brown and pale purplish-grey. Other eggs are similarly marked, but with pale brown and lavender. Two other examples are greyish-white, rather sparingly freckled and blotched with pale rufous and lavender. They measure from .93 to 1.02 in length, and from .68 to .75 in breadth.

Family ALAUDIDÆ.Genus **CERTHILAUDA**, *Swains.****Certhilauda capensis*** (*Bodd.*).

(Plate VI. figs. 6 & 7.)

Alauda capensis, *Thien. Fortpflanz. ges. Vög.* p. 387, tab. xxvi. fig. 11 (1845-54).

Alauda africana, *Thien. tom. cit.* p. 379, tab. xxvi. fig. 13.

Certhilauda capensis, *Sharpe, ed. Layard, Birds S. Afr.* p. 494 (1875-84); *Sharpe, Cat. Birds B. M.* xiii. p. 514 (1890); *Stark, Faun. S. Afr., Birds*, i. p. 233 (1900); *Shelley, Birds Afr.* iii. p. 28 (1902); *Sharpe, Hand-l.* v. p. 154 (1906).

Eggs of the Cape Long-billed Lark are of a blunt oval form and very slightly glossy. They are variable in colour. Four specimens, taken by Layard, are cream-colour or whitish, densely mottled and spotted with brown and underlying lavender. Four examples from the Gould Collection are also cream-colour, but marbled all over with very faint brown and pale grey. Eight eggs vary from .83 to .96 in length, and from .64 to .68 in breadth.

Certhilauda albofasciata, *Lafr.*

(Plate VI. figs. 10 & 12.)

- Certhilauda rufula*, *Sharpe*, ed. *Layard*, *Birds S. Afr.* p. 496 (1875-84); *Butler*, *Feilden & Reid*, *Zool.* 1882, p. 297; *Sharpe*, *Cat. Birds B. M.* xiii. p. 515 (1890); *Nehrk.* *Kat. Eiersamml.* p. 132 (1899); *Stark*, *Faun. S. Afr.*, *Birds*, i. p. 234 (1900).
Certhilauda albofasciata, *Shelley*, *Birds Afr.* iii. p. 22 (1902); *Sharpe*, *Hand-l.* v. p. 154 (1906).

Eggs of the Rufous Long-billed Lark are of a pointed or blunt oval shape and moderately glossy. They are usually dull white or greenish-white, more or less densely speckled all over with yellowish-brown and purplish-grey. One egg is dull white, blotched with lavender and brownish-yellow. Two eggs taken at Maribogo are creamy-white, densely spotted with yellowish-brown, the spots forming a wide yellowish-brown zone round the larger end. They measure from .74 to .84 in length, and from .55 to .6 in breadth.

Alæmon pallida (*Blyth*).

(Plate VI. fig. 13.)

Alæmon desertorum, *Sharpe, Cat. Birds B. M.* xiii. p. 519 (1890) [part.]; *Oates, Fauna Brit. Ind., Birds*, ii. p. 318 (1890); *id.*, ed. *Hume, Nests & Eggs Ind. Birds*, ii. p. 219 (1890).
Alæmon pallida, *Sharpe, Hand-l.* v. p. 155 (1906).

Two eggs of the Eastern Desert-Lark are of the same shape as those of *A. alaudipes*, but have an appreciable amount of gloss. One specimen is very pale greenish-white, spotted and blotched with pale olive-brown and dark purplish-grey. The other is also greenish-white, but is thickly mottled with olive-brown, not blotched as in the first specimen, and the underlying purplish-grey markings are few and inconspicuous. They measure respectively : 1·02 by ·74; ·98 by ·71.

2. Jask. Persian Gulf, 15th April Hume Coll.
(*Ffinch*).

 (1905).
Chersophilus duponti margaritæ, *Hartert, t. c.* p. 253 (1905).

Eggs of Dupont's Lark are of a rather broad, slightly-pointed, oval shape and are somewhat glossy. The ground-colour varies from white or greenish-white to pale buff, and is spotted and blotched, sometimes densely, with yellowish-brown and dull lavender-grey. The markings, as a rule, are heaviest towards the larger end, where they occasionally form a more or less irregular zone. They measure from .91 to .97 in length, and from .66 to .7 in breadth.

Genus **RHAMPHOCORYS**, *Bonap.*

Rhamphocorys clot-bey (*Bonap.*).

(Plate VI. fig. 16.)

Rhamphocorys clot-bey, *Dresser, Birds Eur.* iv. p. 383 (1873); *Sharpe, Cat. Birds B. M.* xiii. p. 527 (1890); *Koenig, J. f. O.* 1895, p. 263, pl. xiv.; *Dresser, Man. Pal. Birds*, pt. i. p. 377 (1902); *Whitaker, Birds Tunis*, i. p. 287 (1905); *Sharpe, Hand-l.* v. p. 156 (1906).

Four eggs of the Thick-billed Lark are of a very broad pointed oval shape and distinctly glossy. The ground-colour is greenish-white, spotted and blotched all over with yellowish-brown and dull lavender-grey. They measure respectively: .91 by .72; .94 by .71; .97 by .74; .98 by .75.

Genus **OTOCORYS**, *Bonap.*

Otocorys alpestris (*Linn.*).

(Plate VI. figs. 17 & 19.)

Eremophila alpestris, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 141 (1874).
Otocorys alpestris, *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 330 (1895);
Sharpe, Hand-l. v. p. 157 (1906).

- Otocoris alpestris alpestris*, *Oberholser, P. U. S. Nat. Mus.* xxiv. p. 807 (1902).
Eremophila alpestris alpestris, *Hartert, Vög. Pal. Faun.* pt. iii. p. 255 (1905).

Eggs of the Horned Lark are of a pointed oval shape and are distinctly glossy. They are greenish-white, profusely freckled all over with greenish-grey or pale olive-brown, with traces of pale lavender underlying the other markings. Some specimens exhibit a few black specks and fine lines on the broad end. The markings are often very dense at this end, and form a well-defined confluent zone. Specimens measure from .86 to .98 in length, and from .6 to .68 in breadth.

Otocorys bilopha (Temm.).

Otocorys bilopha, Sharpe, *Cat. Birds B. M.* xiii. p. 537 (1890); *Whitaker, Birds Tunis*, i. p. 291 (1905); *Sharpe, Hand-l.* v. p. 158 (1906).
Otocoris bilopha, Oberholser, *P. U. S. Nat. Mus.* xxiv. p. 873 (1902).
Eremophila alpestris bilopha, Hartert, *Vög. Pal. Faun.* pt. iii. p. 257 (1905).

Eggs of the Desert Horned Lark resemble those of *O. alpestris*, but are rather more strongly marked than in average specimens of that species. One egg has the markings yellowish-brown, forming a zone of confluent blotches round the larger end. In the other three eggs the markings are olive-brown; in two they are evenly distributed over the whole shell, but in the third they form a rather dense cap at the larger end. They measure respectively: .94 by .67; .95 by .68; .96 by .66; .99 by .68.

Otocorys elwesi, *Blanf.*

Otocorys elwesi, *Sharpe, Cat. Birds B. M.* xiii. p. 534 (1890); *Oates, Fauna Brit. Ind., Birds*, ii. p. 321 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 220 (1890); *Sharpe, Hand-l.* v. p. 158 (1906).

Otocoris longirostris elwesi, *Oberholser, P. U. S. Nat. Mus.* xxiv. p. 868 (1902).

Eremophila alpestris elwesi, *Hartert, Vög. Pal. Faun.* pt. iii. p. 260 (1905).

The eggs of Elwes's Horned Lark in the Collection are of a blunt oval shape and moderately glossy. They are greyish-white, profusely mottled with pale olive-brown and underlying pale purplish-grey. They measure respectively: .9 by .65; .9 by .67.

2. Native Sikhim, 20th June Hume Coll.
(*L. Mandelli*).

Otocorys penicillata (*Gould*).

Otocorys penicillata, *Dresser, Birds Eur.* iv. p. 395 (1874); *Sharpe, Cat. Birds B. M.* xiii. p. 530 (1890); *Oates, Fauna Brit. Ind., Birds*, ii. p. 319 (1890); *Dresser, Man. Pal. Birds*, i. p. 381 (1902); *Sharpe, Hand-l.* v. p. 159 (1906).

Otocoris penicillata penicillata, *Oberholser, P. U. S. Nat. Mus.* xxiv. p. 874 (1902).

Eremophila alpestris penicillata, *Hartert, Vög. Pal. Faun.* pt. iii. p. 261 (1905).

The eggs of the Eastern, or Gould's, Horned Lark are of a pointed oval shape and moderately glossy. They are greenish-white, profusely mottled with greenish-grey and underlying grey or pale lavender. The markings are dense everywhere, but they are more so at the broad end, where they form either a slight cap or an irregular zone. Five examples measure from .9 to .94 in length, and from .66 to .7 in breadth.

5. South-east Russia (*H. F. Möschler*). Seebohm Coll.

Otocorys balcanica, *Reichenow*.

Otocoris penicillata balcanica, *Oberholser, P. U. S. Nat. Mus.* xxiv. p. 876 (1902).

Eremophila alpestris balcanica, *Hartert, Vög. Pal. Faun.* pt. iii. p. 262 (1905).

Otocorys balcanica, *Sharpe, Hand-l.* v. p. 159 (1906).

Three eggs of the Balkan Horned Lark closely resemble those of *O. elwesi* described above, but are of a rather longer oval shape. The ground-colour is whitish densely mottled and freckled with olive-brown and greyish. They measure respectively: .91 by .67; .95 by .68; .97 by .67.

3. Servia, 27th May (*O. Reiser*). W. Radcliffe Saunders, Esq.
[P.]

Otocorys albigula, Bonap.

Eremophila alpestris albigula, *Hartert*, *Vög. Pal. Faun.* pt. iii. p. 262 (1905).

Otocorys albigula, *Sharpe*, *Hand-l.* v. p. 159 (1906).

Six eggs of the Transcaspiian Horned Lark are of a pointed oval form and glossy. They vary somewhat in appearance: four have the ground-colour greenish-white, thickly mottled all over with olive-brown and grey, the markings being most numerous round the larger end, where they form a more or less defined zone, while one has also well-defined black hair-lines on the larger end. A fifth specimen has the ground-colour dull yellowish-white, the markings fewer and often in the form of blotches, while in the sixth specimen the whole surface is thickly but indistinctly mottled with fine speckles of brown and grey. They measure respectively: .89 by .62; .9 by .66; .95 by .68; (2) .98 by .69; .99 by .68.

4. Issik Kul, Turkestan, 7th May. W. Radcliffe Saunders, Esq.
[P.]
2. Askabad, North Persia, 26th May. Crowley Bequest.

Otocorys bicornis, Brehm.

Otocorys penicillata, *Tristram* (nee Gould), *Ibis*, 1866, p. 288.

Otocoris penicillata bicornis, *Oberholser*, *P. U. S. Nat. Mus.* xxiv. p. 878 (1902).

Eremophila alpestris bicornis, *Hartert*, *Vög. Pal. Faun.* pt. iii. p. 263 (1905).

Otocorys bicornis, *Sharpe*, *Hand-l.* v. p. 159 (1906).

An egg of the Palestine Horned Lark closely resembles those of *O. penicillata* described above, but is rather larger and not quite so heavily marked. It measures 1.0 by .68.

1. Pass above Cedars of Lebanon, Palestine, 24th May (*J. H. Cockrane*: *Tristram Coll.*). Crowley Bequest.

Otocorys leucolæma (Coues).

Otocoris alpestris leucolæma, *Oberholser*, *P. U. S. Nat. Mus.* xxiv. p. 820 (1902).

Otocorys leucolæma, *Sharpe*, *Hand-l.* v. p. 159 (1906).

Four eggs of the Desert Horned Lark are perfectly similar to the first pair of *O. praticola* described below, having a greenish ground densely and finely mottled, especially round the larger end, with olive-brown and grey. They measure respectively: .84 by .6; (2) .85 by .6; .86 by .6.

4. Lawrence, Kansas, 25th April. W. Radcliffe Saunders, Esq.
[P.]

Otocorys praticola, *Hensh.*

Otocoris alpestris praticola, *Oberholser, P. U. S. Nat. Mus.* xxiv. p. 825 (1902).

Otocorys praticola, *Sharpe, Hand-l.* v. p. 160 (1906).

Four eggs of the Prairie Horned Lark are of a pointed oval form and are slightly glossy. They vary both in size and in markings: the two from Winnebago are smaller and have the ground-colour greenish-white thickly mottled all over with yellowish-brown and grey; while, of the two from Mount Carroll, one has the ground-colour greenish-white marked with olive-brown and grey, the markings being mostly concentrated in a heavy confluent ring round the larger end, and in the second the ground-colour is whitish, densely and finely marked all over with light brown and lilac, forming an indistinct zone round the larger end. Three eggs measure respectively: .88 by .58; .93 by .63; .95 by .67.

2. Winnebago, Illinois, 5th June Salvin-Godman Coll.
(*J. W. Tolman: Henshaw Coll.*).

2. Mount Carmell, Illinois (*Smiths.* Crowley Bequest.
Inst.: Tristram Coll.).

Otocorys giraudi, *Hensh.*

Otocoris alpestris giraudi, *Oberholser, P. U. S. Nat. Mus.* xxiv. p. 831 (1902).

Otocorys giraudi, *Sharpe, Hand-l.* v. p. 160 (1906).

Four eggs of the Texan Horned Lark are very similar to those of *O. leucolema*, but are rather smaller and of a more blunt oval form. In one example many of the markings take the form of blotches, and two examples have black specks or hair-lines across the larger end. They measure respectively: .77 by .58; .78 by .6; .81 by .58; .82 by .58.

4. Texas, 30th April. W. Radcliffe Saunders, Esq.
[P.]

Otocorys insularis, *Towns.*

Otocoris alpestris insularis, *Townsend, P. U. S. Nat. Mus.* xiii. p. 140 (1890); *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 347 (1895);

Oberholser, P. U. S. Nat. Mus. xxiv. p. 839 (1902).

Otocorys insularis, *Sharpe, Hand-l.* v. p. 160 (1906).

The eggs of Townsend's Horned Lark resemble those of *O. penicillata* and present the same greenish aspect. They measure from .78 to .85 in length, and from .6 to .62 in breadth.

1. Sta. Cruz Island, California, 6th May Salvin-Godman Coll.
(*Henshaw Coll.*).

4. San Miguel Island, California, 20th May (*R. H. Beck*). Salvin-Godman Coll.

Otocorys actia, Oberholser.

Otocoris alpestris actia, Oberholser, *P. U. S. Nat. Mus.* xxiv. p. 845 (1902).

Otocorys actia, Sharpe, *Hand-l. v.* p. 160 (1906).

Four eggs of the Californian Horned Lark are perfectly similar to those of *O. leucolema* described above. In three examples the markings are olive-brown, in the fourth they are greenish-brown. They measure respectively: .80 by .61; .83 by .59; .84 by .59; .88 by .60.

4. San Diego, California, 22nd July W. Radcliffe Saunders, Esq.
(*E. Shives*). [P.].

Otocorys rubea, Hensh.

Otocoris alpestris rubea, Oberholser, *P. U. S. Nat. Mus.* xxiv. p. 851 (1902).

Otocorys rubea, Nehrke, *Kat. Eiersamml.* p. 133 (1899); Sharpe, *Hand-l. v.* p. 161 (1906).

Two eggs of the Ruddy Horned Lark are of a wide, somewhat pointed oval form and moderately glossy. The ground-colour is pale greenish-white, densely spotted with olive-brown and grey, the larger end being marked with rather faint black specks and hair-lines. They measure respectively: .86 by .64; .86 by .67.

2. Los Angeles, California. W. Radcliffe Saunders, Esq.
[P.].

Otocorys occidentalis (McCall).

(Plate VI. fig. 20.)

Otocoris alpestris occidentalis, Oberholser, *P. U. S. Nat. Mus.* xxiv. p. 855 (1902).

Otocorys occidentalis, Sharpe, *Hand-l. v.* p. 161 (1906).

Four eggs of the Central New-Mexican Horned Lark are very similar to those of the allied species described above, having the ground-colour pale greenish-white, with olive-brown or greenish-brown and lavender-grey markings, which form a more or less distinct zone round the larger end. They measure respectively: (2) .85 by .6; .86 by .58; .88 by .6.

4. Socorro, New Mexico, May. W. Radcliffe Saunders, Esq.
[P.].

Otocorys strigata, Hensh.

Otocoris alpestris strigata, Oberholser, *P. U. S. Nat. Mus.* xxiv. p. 837 (1902).

Otocorys strigata, Sharpe, *Hand-l. v.* p. 161 (1906).

Four eggs of the Streaked Horned Lark differ somewhat from the above: in two the ground-colour is pale greenish-white, rather

boldly marked and blotched all over the shell with olive-brown and pale lavender-grey; in the other two the blotches are greyish-brown, and present a more marbled appearance. They measure respectively: .81 by .59; .86 by .6; .87 by .63; .88 by .65.

4. Portland, Oregon, June.

W. Radcliffe Saunders, Esq.
[P.].

Genus **MELANOCORYPHA**, Boie.

Melanocorypha calandra (Linn.).

Alda calandra, Thien. *Fortpflanz. ges. Vög.* p. 381, tab. xxvi, fig. 5, a-d (1845-54); Bree, *Birds Eur.* 2nd ed. iii. p. 126, pl. (1875); Seebohm, *Eggs of Brit. Birds*, p. 258, pl. 58. fig. 16 (1896); Rey, *Eier Vög. Mitteleurop.* p. 253, pl. 36. figs. 23-27 (1900).

Melanocorypha calandra, Baedeker, *Eier Eur. Vög.* tab. 66. fig. 6 (1855-63); Salvin, *Ibis*, 1859, p. 315; Saunders, *Ibis*, 1871, p. 217; Dresser, *Birds Eur.* iv. p. 365 (1871); Danford, *Ibis*, 1878, p. 21; Sharpe, *Cat. Birds B. M.* xiii. p. 551 (1890); *Nehr. Kat. Eiersamml.* p. 133 (1899); Dresser, *Man. Pal. Birds*, pt. i. p. 382 (1902); Whitaker, *Birds Tunis*, i. p. 285 (1905); Sharpe, *Hand-l.* v. p. 162 (1906).

Melanocorypha calandra calandra, Hartert, *Vög. Pal. Faun.* pt. ii. p. 208 (1904).

The eggs of the Calandra Lark vary from a pointed to a blunt oval form and are sometimes very glossy. They vary in ground-colour from greyish-white to very pale greenish- or olive-white, and are marked with rather coarse spots and blotches of olive-brown and umber-brown, together with underlying blotches and smears of purplish-grey or pale lavender. The markings are, as a rule, dense all over the shell, especially on the broad end, where they often run into each other and form an imperfect cap; but three examples from Dinos, Albania, present a rather different type of coloration, being sparingly marked with pale reddish-brown and lavender. Numerous specimens measure from .86 to 1.05 in length, and from .68 to .78 in breadth.

Tephrocorys anderssoni (*Tristr.*).

(Plate VII. fig. 5.)

Tephrocorys anderssoni, *Sharpe*, *Cat. Birds B. M.* xiii. p. 564 (1890); *Stark*, *Faun. S. Afr., Birds*, i. p. 224 (1900).

Tephrocorys cinerea, *Shelley*, *B. Afr.* iii. p. 123 (1902); *Sharpe*, *Hand-l.* v. p. 164 (1906) [part.].

Two eggs of Andersson's Red-capped Lark are of a regular oval shape and without any gloss. The ground-colour is white, marked all over with reddish-brown and violet-grey; in one example all the markings are small, but in the one figured there are a number of reddish-brown blotches, especially round the larger end. They measure respectively ·76 by ·56 and ·76 by ·57.

 p. 165 (1906).

Calandrella conirostris, *Shelley, B. Afr.* iii. p. 133 (1902).

Eggs of the Pink-billed Lark are of a somewhat pointed oval shape and slightly glossy; the ground-colour is white or pale greenish-white, spotted all over, especially round the larger end, with olive-brown and purplish-grey. In four eggs from Wolvehoek the ground-colour is white and the markings are mostly very fine, but in the set from Heilbron the ground-colour is pale greenish-white and the markings are much bolder, many taking the form of small rounded blotches. They vary from .74 to .8 in length, and from .51 to .54 in breadth.

Alauda arvensis arvensis, *Hartert, Vög. Pal. Faun.* pt. iii. p. 244 (1905).

Eggs of the Sky-Lark vary from a pointed to a blunt oval form, but the majority are pointed and a few are pyriform. Many specimens exhibit a high gloss, others are comparatively dull. The ground-colour varies from dull white to grey and greenish-white, and is, as a rule, profusely mottled with various shades of brown and underlying purplish-grey or pale lavender. The markings are frequently tinged with olive, and occasionally with rufous; and while in some specimens they are evenly spread over the entire surface of the shell, in others they are disposed more densely at the broad end and form a cap or zone. Specimens measure from .85 to 1.02 in length, and from .61 to .72 in breadth.

Alauda hiopus, *Hodgs.*

Alauda arvensis, Oates, ed. Hume, *Nests & Eggs Ind. Birds*, ii. p. 220 (1890).

Alauda arvensis subsp.?, Hartert, *Vög. Pal. Fam.* pt. iii. p. 247 (1905).

Alauda arvensis, Sharpe, *Hand-l.* v. p. 166 (1906) [pt.].

An egg of Hodgson's Sky-Lark is of a wide, somewhat pointed, oval form and slightly glossy. The ground-colour is greyish-white, thickly speckled with olive-brown and lavender-grey; the markings being most numerous round the broad end, where they form an indistinct zone. It measures .85 by .66.

1. Sonamurg, Kashmir, 2nd May Hume Coll.
(C. R. Cock).

Alauda pekinensis, Swinh.

(Plate VII. fig. 10.)

Alauda arvensis pekinensis, Hartert, *Vög. Pal. Faun.* pt. iii. p. 248 (1905).

Alauda arvensis, Sharpe, *Hand-l.* v. p. 166 (1906) [pt.].

Two eggs of the East Siberian Sky-Lark closely resemble the above in shape. The ground-colour is dull grey or greenish-white, spotted with umber-brown and lavender-grey, most of the markings being concentrated round the larger end, where they form a more or less wide confluent zone. They measure respectively .88 by .66 and .94 by .65.

1. South Amurland, 20th April. Crowley Bequest.
1. South Amurland, 1st May. Crowley Bequest.

Alauda gulgula, Frankl.

(Plate VII. figs. 6 & 7.)

Alauda gulgula, Sharpe, *Cat. Birds B. M.* xiii. p. 575 (1890) [pt.]; Oates, *Fauna Brit. Ind., Birds*, ii. p. 326 (1890) [pt.]; *id.*, ed. Hume, *Nests & Eggs Ind. Birds*, ii. p. 221 (1890); *Nehr. Kat. Eiersamml.* p. 133 (1899); Sharpe, *Hand-l.* v. p. 167 (1906).

Alauda gulgula gulgula, Hartert, *Vög. Pal. Faun.* pt. iii. p. 249 (1905).

Eggs of the Indian Sky-Lark vary in shape from a rounded oval to a somewhat wide pointed oval and are more or less glossy. The ground-colour varies from white to greenish-white, and even to pale buff, and is usually marked all over with either reddish-brown, olive-brown or greyish-brown, and with lavender-grey; in some specimens the markings are very fine and dense, in others they are less numerous, some taking the form of small blotches, while in one example most of the markings are concentrated into a heavy olive-brown zone round the larger end. They vary from .75 to .85 in length, and from .56 to .64 in breadth.

One clutch of three eggs from Akola presents an altogether different type of coloration, being of a dull greenish-white, densely but obscurely mottled all over with greenish-brown and grey; they closely resemble the eggs of *Calandrella brachydactyla*.

Alauda australis, *Brooks*.

(Plate VII. figs. 11-13.)

Alauda gulgula, *Legge (nec Frankl.)*, *Birds Ceylon*, p. 630 (1879); *Sharpe, Cat. Birds B. M.* xiii. p. 575 (1890) [pt.]; *Oates, Fauna Brit. Ind. Birds*, ii. p. 326 (1890) [pt.]; *id.*, ed. *Hume, Nests & Eggs Ind. Birds*, ii. p. 221 (1890) [pt.].
Alauda gulgula australis, *Hartert, Vög. Pal. Faun.* pt. iii. p. 249 (1905).
Alauda australis, *Sharpe, Hand-l.* v. p. 167 (1906).

Eggs of the South Indian Sky-Lark resemble those of *A. gulgula* and, as in that species, vary considerably in colour and markings. The ground-colour is white, greyish-white, greenish-white, or pale buff; and the surface-markings vary from brown to grey-brown, yellowish-brown, olive-brown, and lilac-brown. One egg is greenish-yellow, indistinctly clouded with greyish, another is pinkish-white, thickly, but obscurely, clouded with lilac-grey. They vary in size from .78 to .9 in length, and from .58 to .65 in breadth.

Alauda gulgula œlivox, *Hartert, Vög. Pal. Faun.* pt. iii. p. 249 (1905).

Eggs of the Chinese Sky-Lark resemble those of *A. australis*, but in some instances they are more heavily marked with small blotches. One of the eggs taken by Whitehead in North-east Luzon has almost the whole of the markings concentrated into a wide band round the middle of the shell. They measure from .75 to .88 in length, and from .59 to .6 in breadth.

Calandrella brachydactyla brachydactyla, *Hartert, Vög. Pal. Faun.* pt. ii. p. 214 (1904).

Eggs of the Short-toed Lark are generally of a pointed oval shape and moderately glossy. The ground-colour varies from creamy white to greenish- or greyish-white, and the markings are of two types. In one the eggs are profusely mottled with pale brown and lavender-grey, and the markings are pretty evenly distributed over the whole shell; in the second, the eggs are marked with rather distinct spots and blotches of darker brown and pale purplish-grey, which are larger and more dense at the broad end, where they form an irregular cap or zone. The general aspect of the eggs of this Lark is decidedly yellowish. Specimens measure from .75 to .85 in length, and from .55 to .62 in breadth.

The eggs of the Andalusian Short-toed Lark are of a pointed oval shape and moderately glossy. Five are pure white, spotted and blotched, especially at the broad end where the markings form an irregular zone, with hair-brown or pale yellowish-brown, and pale underlying lavender. Three examples are greenish-white, more or less freckled with olive-brown and lilac, and resemble the common type of egg laid by *Calandrella brachydactyla*. Eight examples measure from .73 to .8 in length, and from .55 to .59 in breadth.

Eggs of the Bengal Bush-Lark vary from a pointed to a blunt oval shape, and exhibit a considerable amount of gloss. They are greyish-white, profusely marked with various shades of brown, ranging from pale yellowish-brown in some eggs to deep purplish-brown in others. There are, in addition, underlying spots and blotches of lavender or pale purple. The surface-markings are usually more dense at the broad end, and vary considerably, being merely fine specks and freckles in some specimens, and comparatively bold blotches in others. Numerous examples measure from .7 to .83 in length, and from .56 to .63 in breadth.

Spizalauda deva (*Sykes*).

(Plate VIII. figs. 2-4.)

Spizalauda deva, *Sharpe, Cat. Birds B. M.* xiii. p. 621 (1890); *Nehrke, Kat. Eiersamml.* p. 134 (1899); *Sharpe, Hand-l. v.* p. 177 (1906).
Galerita deva, *Oates, Faun. Brit. Ind., Birds*, ii. p. 338 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 236 (1890).

The eggs of Sykes's Crested Lark are typically of a pointed oval shape, and they usually exhibit a considerable amount of gloss. The majority are greyish-white or cream-colour, profusely speckled and mottled with yellowish-brown or olive-brown, the markings being particularly dense at the broad end, where they are generally confluent and form a cap or zone. Some specimens differ in being

distinctly spotted and blotched with rich purplish-brown and lavender, and others are similarly marked with yellowish-brown and purplish-grey. They measure from .71 to .89 in length, and from .55 to .66 in breadth.

- Galerida cristata cristata*, *Hartert, Vög. Pal. Faun.* pt. ii. p. 228 (1904).
- Galerida cristata*, *Sharpe, Hand-l.* v. p. 178 (1906).

The majority of the eggs of the Crested Lark are of a broad oval shape, but some are comparatively narrow and elongate. They exhibit a large amount of gloss and vary very greatly in size and coloration. The ground-colour ranges from a nearly pure white to a greyish-white or a greenish-white. The markings are of various shades of brown, ranging from pale brown through yellowish-brown to umber-brown and dark olive-brown. The underlying markings of purplish-grey or lavender are generally very conspicuous. Many specimens are coarsely blotched, others are somewhat finely speckled, and others again are profusely mottled all over. Examples measure from .8 to 1.04 in length, and from .6 to .72 in breadth.

Galerida chendoola (*Frankl.*).

(Plate VIII. figs. 13 & 14.)

Galerida cristata, *Oates*, *Faun. Brit. Ind., Birds*, ii. p. 337 (1890); *id.*, *ed. Hume*, *Nests & Eggs Ind. Birds*, ii. p. 233 (1890).*Galerida cristata chendoola*, *Hartert*, *Vög. Pal. Faun.* pt. ii. p. 236 (1894).*Galerida chendoola*, *Sharpe*, *Hand-l.* v. p. 180 (1906).Eggs of the Indian Crested Lark resemble those of *G. cristata* in colour and markings, but are, as a rule, considerably smaller. The coloration of one clutch from Delhi is remarkable, the three eggs being white, finely and somewhat sparingly spotted with blackish-grey and lilac-grey, and with a few markings of deep olive-brown. Sixteen examples measure from .81 to .88 in length, and from .62 to .68 in breadth. One egg from E. Narra is exceptionally long; it measures 1.05 by .68.

Galerida theklæ major, *Whitaker, Birds Tunis*, i. p. 259 (1905).
Galerida harterti, *Sharpe, Hand-l.* v. p. 181 (1906).

Three eggs of Hartert's Crested Lark are of a broad oval shape and very slightly glossy. Two are greyish-white, profusely mottled, especially at the broad end, with reddish- or yellowish-brown and purplish-grey. The third is more sparingly marked, and displays several rather large blotches of lavender-grey. They measure respectively .8 by .69, .83 by .67, and .85 by .63.

Genus **LULLULA**, Kaup.

Lullula arborea (Linn.).

Alauda nemorosa, *Thien. Fortpflanz. ges. Vög.* tab. xxvi. fig. 4, a-d (1845-54).

Alauda arborea, *Buendker, Eier Eur. Vög.* tab. 66 fig. 5 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 179, pl. xlv. fig. iii (1856); *Dresser, Birds Eur.* iv. p. 321 (1873); *Seebohm, Brit. Birds*, ii. p. 256, pl. 15 (1884); *Whitehead, Ibis*, 1885, p. 40; *Seebohm, Eggs of Brit. Birds*, p. 255, pl. 58. fig. 8 (1896); *Key, Eier Vög. Mitteleurop.* p. 258, pl. 36. figs. 13-17 (1900); *Dresser, Man. Pal. Birds*, pt. i. p. 389 (1902).

Lullula arborea, *Sharpe, Cat. Birds B. M.* xiii. p. 636 (1890); *Hartert, Vög. Pal. Faun.* pt. iii. p. 241 (1905); *Sharpe, Hand-l.* v. p. 182 (1906).

The eggs of the Wood-Lark are mostly of a broad pointed oval shape and moderately glossy. They are white or greyish-white, thickly speckled and mottled with dull reddish-brown or olive-brown, and underlying lavender or grey. The markings on the eggs of this Lark are almost invariably fine and speckly, and they

seldom attain the dimensions of blotches. They are generally very dense at the broad end of the egg, where they become confluent and often form a large cap or a wide wreath. Specimens measure from .7 to .9 in length, and from .6 to .69 in breadth.

Ammomanes erythrochlamys (Smith).

- Ammomanes erythrochlamys*, *Sharpe, Cat. Birds B. M.* xiii. p. 648 (1890); *Stark, Faun. S. Afr., Birds*, i. p. 190 (1900); *Shelley, Birds Afr.* iii. p. 95 (1902); *Sharpe, Hand-l.* v. p. 185 (1903).

Two eggs of the Damaraland Desert-Lark are very similar to those of *A. isabellina*, having the ground-colour white profusely spotted and freckled all over with dark purplish-brown, reddish-brown, and lavender. They measure .82 by .58.

2. Otjimbingue, Damaraland, 13th Jan. Crowley Bequest.
 (*C. J. Andersson: Tristram Coll.*).

Genus **EREMOPTERYX**, *Kaup*.**Eremopteryx australis** (*Smith*).

(Plate VIII. fig. 23.)

Pyrrhulanda australis, *Ayres, Ibis*, 1871, p. 258; *Sharpe, Cat. Birds B. M.* xiii. p. 651 (1890); *Nehrk. Kat. Eiersamml.* p. 135 (1899); *Stark, Faun. S. Afr., Birds*, i. p. 194 (1900); *Shelley, Birds Afr.* iii. p. 76 (1902).

Eremopteryx australis, *Sharpe, Hand-l.* v. p. 186 (1908).

Three eggs of the Dark-naped Finch-Lark are of a regular oval shape and very slightly glossed. They are greyish-white, profusely speckled and spotted all over with olive-brown and lavender-grey, the markings being somewhat concentrated round the larger end so as to form a more or less distinct zone. They measure from .7 to .71 in length, and from .5 to .53 in breadth.

3. Potchefstroom, Transvaal (*T. Ayres: Tristram Coll.*). Crowley Bequest.

Eremopteryx grisea (*Scop.*).

Pyrrhulanda grisea, *Legge, Birds Ceylon*, p. 637 (1879); *Sharpe, Cat. Birds B. M.* xiii. p. 652 (1890); *Oates, Fauna Brit. Ind., Birds*, ii. p. 341 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 234 (1890); *Nehrk. Kat. Eiersamml.* p. 135 (1899).

Eremopteryx grisea, *Sharpe, Hand-l.* v. p. 187 (1908).

The eggs of the Ashy-crowned Finch-Lark are mostly of a pointed oval form and exhibit a moderate amount of gloss. The ground-colour is white, tinged with grey or green, and is thickly speckled and mottled with two or more shades of brown and underlying lavender. In two specimens the markings are of a purplish-brown colour and cover nearly the whole of the shell, but as a rule the markings, though dense, permit a considerable portion of the ground-colour to be seen. Specimens measure from .69 to .79 in length, and from .5 to .6 in breadth.

Chloris chloris chloris, *Hartert, Vög. Pal. Faun.* pt. i. p. 61 (1903).

The eggs of the Greenfinch are of a regular oval shape and possess a fair amount of gloss. The ground-colour varies from

bluish-white to pale blue or bluish-green, and this is marked, principally over the larger half of the egg, with specks, spots, and small blotches of deep purplish-brown and underlying spots, small clouds and smears of pinkish-brown. Occasionally markings of both kinds are equally distributed over the whole shell. Numerous specimens measure from $\cdot 7$ to $\cdot 9$ in length, and from $\cdot 5$ to $\cdot 62$ in breadth.

Seven of the eggs of the Chinese Greenfinch in the Collection are

pale bluish-green, sparingly speckled at the broad end with deep purplish-brown or black. They exhibit no trace of any of the pinkish-brown shell-markings so constantly to be found on the eggs of *L. chloris*. On the other hand, an eighth specimen has only a few pinkish shell-markings, the darker surface-markings being almost absent; the two eggs from Si-ning exhibit numerous small darker and lighter purplish-red shell-markings, as well as a few darker surface-spots; and, in the clutch from Chin-kiang, the eggs are white, without markings of any kind. Specimens measure from .7 to .76 in length, and from .5 to .55 in breadth.

Eophona melanura melanura, *Hartert, Vög. Pal. Faun.* pt. i. p. 59 (1903).

Eggs of the Black-tailed Hawfinch recall in general appearance those of *Coccothraustes coccothraustes*, but they are more heavily marked. They vary in shape from a very broad to a somewhat pointed oval form, and are distinctly glossy. They are pale greyish- or olive-green, with strongly-marked rounded spots and irregular lines and scrolls of very dark brown, and with under-

lying spots and lines of pale violet-grey. They vary from .85 to 1.0 in length, and from .68 to .73 in breadth.

Genus **HESPERIPHONA**, Bonap.

Hesperiphona montana, Ridgw.

(Plate IX. fig. 1.)

Hesperiphona vespertina, var. *montana*, Ridgw. in Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 449 (1874).

Coccothraustes vespertina, Swinburne, *Auk*, v. p. 113 (1888).

Hesperiphona vespertina, Sharpe, *Cat. Birds B. M.* xii. p. 32 (1888).

Hesperiphona vespertina montana, Ridgw. *Birds North & Middle Amer.* i. p. 41 (1901).

Hesperiphona montana, Sharpe, *Hand-l.* v. p. 193 (1908).

Four eggs of the Montana Grosbeak are of a broad or moderately broad oval form, and slightly glossy. The ground-colour is very pale blue, with spots and small blotches of pale brown and lilac-brown distributed all over the shell, but, usually, most numerous round the larger end. They measure from .95 to 1.0 in length, and from .66 to .77 in breadth.

4. Alameda Co., California, 16th June Crowley Bequest.
(J. J. Barrows).

Genus **COCCOTHTHAUSTES**, Brisson.

Coccothraustes coccothraustes (Linn.).

Fringilla coccothraustes, Thien. *Fortpflanz. ges. Vög.* p. 419, tab. xxxvi. fig. 2, a-c (1845-54).

Coccothraustes vulgaris, Baedeker, *Eier Eur. Vög.* tab. 12. fig. 1 (1855-63); Hewitson, *Eggs of Brit. Birds*, i. p. 205, pl. lii. figs. ii & iii (1856); Saunders, *Ibis*, 1871, p. 220; Dresser, *Birds Eur.* iii. p. 575 (1875); Seebohm, *Brit. Birds*, ii. p. 57, pl. 13 (1884); *id.*, *Eggs of Brit. Birds*, p. 237, pl. 56. figs. 5 & 8 (1896); Dresser, *Man. Pal. Birds*, pt. i. p. 287 (1902).

Coccothraustes coccothraustes, Sharpe, *Cat. Birds B. M.* xii. p. 36 (1888); Nehrke, *Kat. Eiersamml.* p. 104 (1899); Rey, *Eier Vög. Mitteleurop.* p. 335, pl. 41. figs. 18-22 (1900); Whitaker, *Birds Tunis*, i. p. 200 (1905); *Jour. Eggs Europ. Birds*, p. 44, pl. 9. figs. 18-22 (1906); Sharpe, *Hand-l.* v. p. 199 (1908).

Coccothraustes coccothraustes coccothraustes, Hartert, *Vög. Pal. Faun.* pt. i. p. 55 (1903).

The eggs of the Hawfinch are usually of a broad and pointed oval shape, but some are quite pyriform. They possess a large amount of gloss, and are of two types. In the commonest, they

are pale olive- or greyish-green, somewhat sparingly spotted and blotched with dark olive-brown, and rather profusely marked in various ways with pale purplish shell-markings. In the second type, the ground-colour is buff and the markings, similar to those of the first type in general character, are paler and decidedly ochraceous in colour. In addition to these markings, there are on most eggs of the Hawfinch numerous lines and scrolls fantastically drawn about the larger end of the egg, and occasionally forming a wreath round that point. They vary greatly in size, the smallest specimen in the series measuring $\cdot 8$ by $\cdot 61$, and the largest $1\cdot 03$ by $\cdot 75$.

Clutch containing an egg of the Cuckoo (*Cuculus canorus*).

4. Chingford, Essex, 30th May. W. Radcliffe Saunders, Esq.
[P.]

Genus MYCEROBAS, *Cab.*

Mycerobas carneipes (Hodgs.).

(Plate IX. fig. 2.)

- Pycnorhamphus carneipes*, Sharpe, *Cat. Birds B. M.* xii. p. 47 (1888);
Oates, Fauna Brit. Ind., Birds, ii. p. 200 (1890); *Dresser, Man. Pal. Birds*, pt. i. p. 288 (1902); *id.*, *Ibis*, 1903, p. 406, pl. x. figs. 9-11.
Mycerobas carneipes, Hartert, *Vög. Pal. Faun.* pt. i. p. 60 (1903);
Sharpe, Hand-l. v. p. 200 (1908).

Two eggs of the White-winged Grosbeak are much like those of *Perissospiza icteroides* in general appearance. They are of a long oval shape and somewhat glossy. The ground-colour is of a pale warm grey, with boldly-marked knots, spots, and tangled lines of rich dark brown and underlying cloudy markings of purplish- or brownish-grey. In one specimen the markings are almost entirely confined to the larger end, but in the specimen figured, though more numerous round the larger end, they are also distributed over the rest of the shell. They measure respectively 1.2 by .78 and 1.17 by .77.

2. Kurrum Valley, 8500 ft., N.W. India, 5th July. C. H. T. Whitehead, Esq.

Genus PERISSOSPIZA, *Oberholser*.

Perissospiza icteroides (Vig.).

(Plate IX. figs. 3 & 4.)

- Pycnorhamphus icteroides*, Sharpe, *Cat. Birds B. M.* xii. p. 44 (1888);
Oates, Fauna Brit. Ind., Birds, ii. p. 198 (1890); *id.*, *ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 150 (1890).
Perissospiza icteroides, Sharpe, *Hand-l.* v. p. 200 (1908).

Three eggs of the Black-and-Yellow Grosbeak have the ground-

colour pale greyish-green and possess a considerable amount of gloss. One specimen is a broad ellipse in shape, and round one end there is a wreath or zone of tangled lines, knots, and spots of deep blackish-brown. The remainder of the surface of the shell is unmarked. The other specimens have a similar but rather less extended zone round the larger end, with a few black spots scattered here and there over the remainder of the shell. The space occupied by the zone is underlaid with a faint purplish-grey wash in all three examples. They measure respectively: 1.18 by .78; 1.03 by .8; 1.02 by .8.

Zamelodia melanocephala (*Swains.*).

(Plate IX. fig. 5.)

Hedymeles melanocephalus, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 73 (1884); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 338 (1884); *Sharpe, Cat. Birds B. M.* xii. p. 62 (1888); *Nehrke. Kat. Eiersamml.* p. 104 (1899).

Zamelodia melanocephala, *Ridgw. Birds North & Middle Amer.* i. p. 617 (1901); *Sharpe, Hand-l.* v. p. 202 (1908).

Eggs of the Black-headed Grosbeak are of an oval shape and

somewhat glossy. They are bluish-green, mottled and blotched with greyish-brown and pale underlying grey. They measure from .93 to 1.08 in length, and from .68 to .71 in breadth.

One of the eggs among those from Los Angeles appears to belong to another set. It is altogether smaller than the rest and has the ground-colour much bluer and the spots rounder and more sharply defined.

Genus **ORYZOBORUS**, *Cab.***Oryzoborus torridus** (*Scop.*).

Oryzoborus torridus, *Sharpe, Cat. Birds B. M.* xii. p. 77 (1888); *Nehrk. Kat. Eiersamml.* p. 195 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 213 (1900); *Sharpe, Hand-l.* v. p. 204 (1908).

An egg, said to be that of the Brazilian Rice-Grosbeak, is of a nearly regular oval form and distinctly glossy. It has the ground-colour pale creamy-white, finely and densely spotted all over, but especially round the larger end, with reddish-brown and with a few scattered markings and spots of rich dark brown. It measures .76 by .58 (=21 by 15 mm.). These measurements are somewhat greater than those given by Nehrkorn and Ihering (19 by 14 mm.).

1. Iguape, São Paulo, Brazil, 24th Oct. Crowley Bequest.

Oryzoborus crassirostris (*Gmel.*).

(Plate IX. fig. 6.)

Oryzoborus occidentalis, *Scl. & Salv. P. Z. S.* 1879, p. 506.

Oryzoborus crassirostris, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 348, footnote (1885); *Sharpe, Cat. Birds B. M.* xii. p. 79 (1888); *id., Hand-l.* v. p. 204 (1908).

The eggs of the Thick-billed Rice-Grosbeak are lengthened ovals, and but very slightly glossy. The ground-colour is a very light buff, and the entire surface of the egg is covered with spots, blotches, smears and clouds of dark chocolate-brown, pale chocolate-brown, and underlying pinkish-grey. Two examples measure respectively: .9 by .65; .9 by .6.

2. Medellin, Antioquia, U.S. Colombia
(*T. K. Salmon*).

Salvin-Godman Coll.

Oryzoborus funereus (Scl.).

Oryzoborus funereus, *Scl. & Salv. P. Z. S.* 1879, p. 506; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 349 (1885); *Sharpe, Cat. Birds B. M.* xii. p. 81 (1888); *Ridgw. Birds North & Middle Amer.* i. p. 605 (1901); *Sharpe, Hand-l.* v. p. 205 (1908).

Three eggs of the Dusky Rhee-Grosbeak are of an oval shape and somewhat glossy. They are greenish-white, thickly marked with reddish-brown and underlying purplish-grey. In one specimen the markings consist chiefly of small blotches; in another of dots and fine streaks. Three examples measure respectively: .71 by .54; .74 by .55; and .75 by .55.

Genus **PYRRHULAGRA**, *Less.***Pyrrhulagra ruficollis (Gmel.).**

(Plate IX. fig. 8.)

Pyrrhula violacea, *Gosse, Birds Jamaica*, p. 254 (1847).

Loxigilla violacea, *Sharpe, Cat. Birds. B. M.* xii. p. 82 (1888) [part.].

Pyrrhulagra violacea ruficollis, *Ridgw. Birds North & Middle Amer.* i. p. 552 (1901).

Pyrrhulagra ruficollis, *Sharpe, Hand-l.* v. p. 205 (1908).

Eggs of the Purple Grosbeak are regular ovals and slightly glossy. They are white or creamy-white, blotched and spotted, most thickly at the larger end where the markings coalesce and form a cap, with pale reddish-brown and underlying purplish-grey. They measure from .9 to .96 in length, and from .62 to .68 in breadth.

Sporophila obscura (Tacz.).

(Plate IX. fig. 10.)

Spermophila obscura, Sharpe, *Cat. Birds B. M.* xii. p. 101 (1888);
Holland, Ibis, 1892, p. 196.

The White-throated Finch, *Holland, Ibis*, 1890, p. 426.

Sporophila obscura, Sharpe, *Hand-l.* v. p. 209 (1908).

The eggs of the White-throated Grosbeak are somewhat broad ovals and devoid of gloss. Two specimens are very pale bluish-white, speckled sparingly, and only on the larger half of the egg, with blackish-brown and pale pink. Two other specimens are bluish-white, spotted and blotched with black, umber-brown and dull underlying grey. The markings are most dense at the broad end and are there intermingled with a few fine black lines and scrolls. Four examples measure respectively: .68 by .5; .67 by .51; .65 by .52; .68 by .51.

Sporophila torqueola (Bonap.).

- Spermophila torqueola*, *Salvin & Godman, Biol. Centr.-Amer., Aves*, i. p. 351 (1885); *Sharpe, Cat. Birds B. M.* xii. p. 119 (1888) [part.].
Sporophila torqueola, *Ridgw. Birds North & Middle Amer.* i. p. 577 (1901); *Sharpe, Hand-l.* v. p. 211 (1908).

Two eggs, said to be those of the Cinnamon-rumped Seed-eater, are of a rather long oval form, devoid of gloss, and of a uniform pale bluish-white. They are not unlike two eggs of *S. obscura* collected by Mr. A. H. Holland, but these latter have the ground-colour nearly white and have a few small spots and markings towards the larger end. They measure respectively .62 by .48 and .68 by .48.

2 [S.W. Mexico.]

Crowley Bequest.

Sporophila moreleti (Bonap.).

(Plate IX. figs. 11 & 12.)

- Spermophila moreleti*, *Scl. & Salv. Ibis*, 1859, p. 17; *Salv. Ibis*, 1859, p. 468; *Merrill, Pr. U.S. Nat. Mus.* i. p. 129 (1878); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 352 (1885); *Sharpe, Cat. Birds B. M.* xii. p. 123 (1888); *Nehrk. Kat. Eiersamml.* p. 105 (1899).
Sporophila moreleti, *Ridgw. Birds North & Middle Amer.* i. p. 575 (1901).
Sporophila moreleti, *Sharpe, Hand-l.* v. p. 212 (1908).

Eggs of Morelet's Seed-eater are of a blunt oval form and possess a small amount of gloss. The ground-colour varies from greenish-white to pale greenish-blue, and is sparingly blotched and spotted with dark brownish-black and thickly covered with clouds, streaks and blotches of various shades of pale rufous and violet-grey. In eleven specimens the markings are equally distributed over the surface of the shell, except the dark ones, which are chiefly at the larger end. In two others, the markings form a dense cap at the larger end, and the smaller half of the egg is entirely unmarked. Specimens measure from .62 to .68 in length, and from .48 to .52 in breadth.

Sporophila caerulescens (Vieill.).

- Spermophila caerulescens*, *Sharpe, Cat. Birds B. M.* xii. p. 126 (1888); *Scl. & Huds. Arg. Orn.* i. p. 46 (1888); *Nehrk. Kat. Eiersamml.* p. 105 (1899); *Euler, Rev. Mus. Paulista*, iv. p. 31 (1900); *Ihering, Rev. Mus. Paulista*, iv. p. 213 (1900).
Sporophila caerulescens, *Sharpe, Hand-l.* v. p. 212 (1908).

Eggs of the Screaming Seed-eater are of a rather long oval form and almost devoid of gloss. The ground-colour is white or bluish-white, and the markings in most of the specimens are similar to those of *S. moreleti* described above. A set of five eggs from the Crowley Collection differs considerably, being heavily marked with chocolate-brown blotches and markings, chiefly distributed around the larger end. The measurements vary from .62 to .71 in length, and from .47 to .5 in breadth.

Genus **VOLATINIA**, *Reichenb.***Volatinia jacarini** (*Linn.*).

- Volatinia jacarini*, *Sharpe, Cat. Birds B. M.* xii. p. 152 (1888) [part.]; *Nehrk. Kat. Eiersamml.* p. 106 (1899); *Euler, Rev. Mus. Paulista*, iv. p. 30 (1900); *Ihering, Rev. Mus. Paulista*, iv. p. 213 (1900); *Sharpe, Hand-l.* v. p. 217 (1908).

According to Nehrkorn, the eggs of the Jacarini Grassquit resemble those laid by the various species of *Euethia*.

An egg said to be of this species, but more probably that of some species of *Elainea*, is of a blunt oval shape and almost devoid of gloss. It is pale creamy-white with a few scattered spots and dots of chocolate-brown, mostly situated round the larger end. It measures .68 by .5.

Volatinia splendens (*Vieill.*).

(Plate IX. fig. 17.)

- Volatinia jacarina*, *Scl. & Salv. (nec Linn.) P. Z. S.* 1879, p. 507; *Forbes, Ibis*, 1881, p. 336; *Lawrence, P. U.S. Nat. Mus.* ix. p. 615 (1886).

- Volatinia splendens*, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 357 (1885); *Sharpe, Hand-l. v.* p. 217 (1908).
Volatinia jacarini, *Sharpe, Cat. Birds B. M.* xii. p. 152 (1888) [part.].
Volatinia jacarini splendens, *Ridgw. Birds North & Middle Amer.* i. p. 526 (1901).

Eggs of the Blue-black Grassquit are of a blunt oval shape and slightly glossy. They are white, speckled and blotched with reddish-brown of two shades. The markings are dense at the larger end of the egg, where they form a zone or cap of greater or lesser extent. Eight examples measure from .6 to .7 in length, and from .5 to .54 in breadth.

|------------------------------------|--------------------------------------|

Genus **CARDINALIS**, Bonap.**Cardinalis cardinalis** (Linn.).

- Cardinalis virginianus*, Baird, Brewer & Ridgw. *N. Amer. Birds*, ii. p. 100 (1874) [part.]; Reid, *Bull. U.S. Nat. Mus.* no. 25, p. 200 (1884); Salv. & Godm. *Biol. Centr.-Amer., Aves*, i. p. 340 (1884) [part.]; Nehrke. *Kat. Eiersamml.* p. 106 (1899).
Cardinalis cardinalis, Sharpe, *Cat. Birds B. M.* xii. p. 161 (1888); *id.* *Hand-l.* v. p. 219 (1908).
Cardinalis cardinalis cardinalis, Ridgw. *Birds North & Middle Amer.* i. p. 635 (1901).

Eggs of the Cardinal are of an elongate oval shape and possess a considerable amount of gloss. The ground-colour varies from white to ashy or greenish-white, and is very thickly covered with spots, streaks and blotches of ashy-brown and underlying purplish-grey. On many specimens the markings are large and more or less confluent; on others they are fine and distinct. In most cases they form an ill-defined cap at the larger end. Numerous specimens measure from .89 to 1.1 in length, and from .62 to .78 in breadth.

Cardinalis cardinalis igneus, Ridgw. Birds North & Middle Amer. i. p. 647 (1901).

Two eggs of the Saint-Lucas Cardinal are similar to some of the finely spotted forms of *C. cardinalis* described above. They measure respectively: ·9 by ·68; ·95 by ·68.

2. [Lower California (*Smiths. Inst.*)] Salvin-Godman Coll.

Genus SALTATOR, Vieill.

The eggs of the birds of this genus (which has usually been included among the Tanagers) appear to be very similar to one another in shape and colour. They are of a somewhat narrow oval form, the smaller end generally pointed, but occasionally blunt, and possess a considerable amount of gloss. They are blue, marked almost entirely in a zone or wreath around the broad end, rarely round the smaller end, with lines and blotches of deep black. In some eggs the zone is composed of an intricate tracery of fine lines, intermingled with a few spots and blotches. In others the zone is imperfect and is composed of blotches and hieroglyphic-like scrawls. There is rarely even a speck on any other part of the shell.

Saltator atriceps, Less.

Saltator atriceps, Boucard, P. Z. S. 1883, p. 443; Salv. & Godm. Biol. Centr.-Amer., Aves, i. p. 325 (1884) [part.]; Sel. Cat. Birds B. M. xi. p. 283 (1886); Nehrke. Kat. Eiersamml. p. 97 (1899); Sharpe, Hand-l. v. p. 222 (1908).

Fringilla cœlebs, *Linn.*

Fringilla cœlebs, *Thien. Fortpflanz. ges. Vög.* p. 410, tab. xxxvi. fig. 5, *a-e* (1845-54); *Baedecker, Eier Eur. Vög.* tab. xii. fig. 3 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 192, pl. xlix. fig. i (1856); *Dresser, Birds Eur.* iv. p. 3 (1873); *Seeborn, Brit. Birds*, ii. p. 100, pl. 13 (1884); *Sharpe, Cat. Birds B. M.* xii. p. 171 (1888); *Seeborn, Eggs of Brit. Birds*, p. 243, pl. 56. figs. 19 & 20 (1896); *Rey, Eier Vög. Mitteleurop.* p. 328, pl. 39. figs. 1-8 (1900); *Dresser, Man. Pal. Birds*, pt. i. p. 306 (1902); *Jourd. Eggs Europ. Birds*, p. 82, pl. 10. figs. 1-8 (1906); *Sharpe, Hand-l. v.* p. 225 (1908).
Fringilla cœlebs cœlebs, *Hartert, Vög. Pal. Faun.* pt. ii. p. 125 (1904).

The eggs of the Chaffinch are typically of a broad oval form, and possess a moderate amount of gloss. They are of many types of coloration. In the commonest, the ground-colour is pale purplish-grey suffused with soft clouds of pale rufous, especially at the broad end, where the markings are, as a rule, most numerous. These consist of spots of various sizes, and occasionally of short crooked lines of deep chocolate-brown, the edges being blurred and merging into the surrounding rufous clouds.

In a second type, the egg is pale bluish-green, the large end covered with a cap of faint rufous and marked with a few tiny dots and spots of dark brown.

In a third type, the egg is pale bluish-green, either plain or marked with a few minute specks.

In a fourth type, the egg is pale bluish-green marked, mostly at

the broad end, with lilac blotches and chocolate-brown spots. Eggs of this type have sometimes a wreath of tangled lines round the broad end in addition to the other markings.

In a fifth type, the egg is a clear bluish-green, delicately marked with small, well-defined chocolate-brown spots, chiefly disposed over the broad end and intermixed with a few faint grey underlying specks.

The eggs measure from $\cdot 7$ to $\cdot 85$ in length, and from $\cdot 52$ to $\cdot 63$ in breadth.

Many of the eggs of the Brambling are quite inseparable from the common type of egg of *F. cœlebs*. Others resemble the eggs of

the fourth type. Some are pale bluish-green, thickly freckled all over with dull rufous; others are nearly uniform greyish-blue, with few or no markings, and others again are intermediate between the types of eggs of *F. caelebs* already described. They measure from .7 to .8 in length, and from .53 to .6 in breadth.

Carduelis carduelis carduelis, *Jourd. Eggs Europ. Birds*, p. 50, pl. 11. figs. 16-20 (1906).

The eggs of the European Goldfinch are of a pointed oval shape, and many are moderately glossy, while some are quite devoid of gloss. The ground-colour varies from bluish-white to pale greenish-blue and is marked, chiefly over the broader half of the egg, with specks, spots, and short lines, which vary in colour from pinkish-brown to dark chocolate-brown. At the broad end there are usually many spots and clouds of lilae, underlying the other markings. The eggs measure from .62 to .71 in length, and from .48 to .53 in breadth.

Spinus spinus, *Sharpe, Hand-l.* v. p. 230 (1908).

Eggs of the Siskin are typically of a pointed oval form and very slightly glossy. They are bluish-white, speckled and blotched, more thickly over the broad end than elsewhere, with pale rufous and underlying lilac. The majority of the specimens are marked in addition, and almost entirely at the broad end, with a few specks and lines of deep chocolate-brown or black, and are not separable from the eggs of the Goldfinch. They measure from .6 to .72 in length, and from .45 to .53 in breadth.

Spinus tottus (*Sparrm.*).

- Chrysomitris totta*, *Sharpe, Cat. Birds B. M.* xii. p. 231 (1888); *Stark, Fauna S. Afr., Birds*, i. p. 182 (1900); *Shelley, Birds Afr.* iii. p. 175 (1902).
Spinus tottus, *Reichenow, Vög. Afr.* iii. p. 276 (1904); *Sharpe, Hand-l.* v. p. 231 (1908).

An egg in the Collection, said to be that of the South-African Siskin, is of a broad oval shape and devoid of gloss. It is whitish (probably faded), with one or two spots of dark brown and pale brownish-lilac near the larger end. It measures .71 by .52. Stark describes eggs of this species as being "pale bluish-green, sparingly spotted and sometimes zoned with reddish-brown of two shades. They average .72 × .54."

Chrysomitris barbata, *Sharpe, Cat. Birds B. M.* xii. p. 216 (1886).
Spinus barbatus, *Sharpe, Hand-l.* v. p. 231 (1908).

Two eggs of the Patagonian Siskin are elliptical in shape, slightly glossy, and of a very pale bluish-white colour. They measure respectively: .69 by .51; .7 by .5.

Two eggs from the Crowley Collection, also believed to be of this

species, are of a rather pointed oval shape. One is greyish-white and the other greenish-white, and both are unspotted. They measure respectively .7 by .52 and .71 by .55.

2. South America.
2. [South America.]

Old Collection.
Crowley Bequest.

Spinus ictericus (Licht.).

Chrysomitris magellanica, Gibson, *Ibis*, 1880, p. 30.

Chrysomitris icterica, Sharpe, *Cat. Birds B. M.* xii. p. 217 (1888); *Scl. & Huds. Argent. Orn.* i. p. 64 (1889); *Holland, Ibis*, 1892, p. 197; *Nehr. Kat. Eiersamml.* p. 107 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 213 (1900).

Spinus ictericus, Sharpe, *Hand-l.* v. p. 231 (1908).

The eggs of the Black-headed Siskin are of a regular oval form, devoid of gloss, and of a plain bluish-white colour. They measure from .65 to .68 in length, and from .49 to .51 in breadth. The eggs of this species are said to be sometimes spotted.

2. Argentina, Oct.
3. Argentina, Oct.

A. H. Holland, Esq. [C.].
A. H. Holland, Esq. [C.].

Spinus notatus (Du Bus).

Chrysomitris notata, Salr. & Godm. *Biol. Centr.-Amer., Aves*, i. p. 428 (1886); *Nehr. Kat. Eiersamml.* p. 107 (1899).

Spinus notatus notatus, Ridgw. *Birds North & Middle Amer.* i. p. 102 (1901).

Spinus notatus, Sharpe, *Hand-l.* v. p. 232 (1908).

The two eggs of the Mexican Black-headed Siskin are of a pale bluish-white colour, entirely devoid of markings. One is of a rather blunt oval shape, the other more pointed, and both are devoid of gloss. They measure respectively .60 by .42 and .58 by .44.

Probably the eggs described by Nehr Korn as being of this species have been wrongly identified: they are apparently much too large (19 by 12½ mm.).

2. Mexico.

Genus **ASTRAGALINUS**, *Cab.*

Astragalinus tristis (*Linn.*).

Chrysomitris tristis, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 471 (1874); *Sharpe, Cat. Birds B. M.* xii. p. 195 (1888); *Nehrk. Kat. Eiersamml.* p. 107 (1899).

Astragalinus tristis tristis, *Ridgw. Birds North & Middle Amer.* i. p. 109 (1901).

Astragalinus tristis, *Sharpe, Hand-l.* v. p. 233 (1908).

The eggs of the American Siskin, or Yellow-bird, are without gloss and of a uniform bluish-white colour. They appear to vary much in size and shape. One specimen is of a blunt oval form and measures .68 by .54; others are pointed ovals and measure, on the average, .65 by .5.

[E.] |

Astragalinus pallidus (*Mearns*).

Astragalinus tristis pallidus, *Ridgw. Birds North & Middle Amer.* i. p. 111 (1901).

Astragalinus pallidus, *Sharpe, Hand-l.* v. p. 234 (1908).

Eggs of the Western Goldfinch are indistinguishable from those of *A. tristis*. They measure from .6 to .62 in length, and from .48 to .49 in breadth.

- | | |

| 4. Tucson, Arizona, July. | W. Radcliffe Saunders, Esq.
[P.] |
|---------------------------|-------------------------------------|

Astragalinus psaltria (Say).

Chrysomitris psaltria, Sharpe, *Cat. Birds B. M.* xii. p. 204 (1888).

Astragalinus psaltria, Ridgw. *Birds North & Middle Amer.* i. p. 114 (1901).

Astragalinus psaltria, Sharpe, *Hand-l.* v. p. 234 (1908).

Eggs of the Arkansas Goldfinch are similar to those of *A. tristis*. They measure from .59 to .62 in length, and from .43 to .47 in breadth.

2. [Western U.S. America] (*T. M. Crowley Bequest.*
Brewer: Tristram Coll.).

Astragalinus arizonæ, Coues.

Chrysomitris psaltria, var. *arizonæ*, Baird, *Brewer & Ridgw. N. Amer. Birds*, i. p. 476 (1874).

Chrysomitris arizonæ, Sharpe, *Cat. Birds B. M.* xii. p. 206 (1888); *Nehr. Kat. Eiersamml.* p. 107 (1899).

Astragalinus psaltria arizonæ, Ridgw. *Birds North & Middle Amer.* i. p. 115 (1901).

Astragalinus arizonæ, Sharpe, *Hand-l.* v. p. 234 (1908).

The eggs of the Arizona Siskin are pointed ovals, devoid of gloss, and plain bluish-white. They measure from .59 to .61 in length, and from .45 to .48 in breadth.

3. Arizona, North America (*E. Dickerson: Henshaw Coll.*) Salvín-Godman Coll.
2. Las Vegas, New Mexico, 10th W. Radcliffe Saunders, Esq.
August (*C. H. Marsh*). [P.]

Astragalinus mexicanus (Swains.).

Chrysomitris mexicanus, Sharpe, *Cat. Birds B. M.* xii. p. 206 (1888) [part.]; *Nehr. Kat. Eiersamml.* p. 107 (1899).

Astragalinus psaltria mexicanus, Ridgw. *Birds North & Middle Amer.* i. p. 117 (1901).

Astragalinus mexicanus, Sharpe, *Hand-l.* v. p. 234 (1908).

The eggs of the Mexican Siskin are similar to those of the allied species already described. They measure .56 by .47.

2. South Mexico (*Tristram Coll.*) Crowley Bequest.

Astragalinus croceus (Jouy).

Chrysomitris psaltria, var. *mexicana*, Baird, *Brewer & Ridgw. N. Amer. Birds*, i. p. 478 (1874) [part.].

Chrysomitris mexicana, *Sci. & Salv. Ibis*, 1860, p. 34; *Salv. & Godm.*

- Biol. Centr.-Amer., Aves*, i. p. 431 (1886) [part.]; *Sharpe, Cat. Birds B. M.* xii. p. 206 (1888) [part.].
Astragalinus psaltria croceus, *Ridgw. Birds North & Middle Amer.* i. p. 118 (1901).
Astragalinus croceus, *Sharpe, Hand-l.* v. p. 234 (1908).

The eggs of the Central-American Siskin are of a narrow, blunt oval form, without gloss, and plain bluish-white. Three examples measure respectively: .61 by .47; .61 by .46; .6 by .45.

- | | |
|-----------------------|---------------------|

| 2. U.S. Colombia. | Crowley Bequest. |
| 3. Medellin, Antioquia, U.S. Colombia
(T. K. Salmon). | Salvin-Godman Coll. |

Astragalinus lawrencei (Cass.).

- Chrysomitris lawrencii*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 478 (1874); *Sharpe, Cat. Birds B. M.* xii. p. 223 (1899); *Nehrk. Kat. Eiersamml.* p. 107 (1899).
Astragalinus lawrencii, *Ridgw. Birds North & Middle Amer.* i. p. 121 (1901).
Astragalinus lawrencei, *Sharpe, Hand-l.* v. p. 235 (1908).

Eggs of Lawrence's Siskin are of a broad oval shape, devoid of gloss, and plain white. They measure from .55 to .6 in length, and from .4 to .48 in breadth.

- | | |
|--|-----------------------------------|
| 4. California, 24th May (<i>Henshaw Coll.</i>). | Salvin-Godman Coll. |
| 3. Los Nietos, S. California, 10th April. | Crowley Bequest. |
| 4. San Diego, California, 1st June (<i>M. Belden.</i>) | W. Radcliffe Saunders, Esq. [P.]. |
| 4. San Bernardino, California, 24th April. | W. Radcliffe Saunders, Esq. [P.]. |

Genus **LINARIA**, *Bechst.*

The eggs of the Twite, Linnet, and Redpolls are so closely alike both in size and coloration that they cannot be separated, and they require to be very carefully authenticated at the time they are taken from the nest. They also resemble the eggs of the Greenfinch, Goldfinch, and Siskin.

The ground-colour varies from bluish-white to pale blue or bluish-green. The broader half of the egg is rather thickly, the smaller half sparingly, speckled, spotted, and blotched with reddish-brown, purplish-brown or deep chocolate-brown, and underlying pinkish-brown or lilac. The markings vary in number, size, and intensity of colour in different specimens, and on some eggs the underlying markings are altogether absent. A few examples are plain white or blue. Some specimens in each series exhibit lines of a dark colour similar to those on the egg of a Bunting, and these occasionally form a wreath or zone round the larger end.

Linaria flavirostris (*Linn.*).

Fringilla flavirostris, *Thien. Fortpflanz. ges. Vög.* p. 405, tab. xxxv. fig. 11, a-c (1845-54); *Seebohm, Brit. Birds*, ii. p. 111, pl. 13 (1884); *id., Eggs of Brit. Birds*, p. 245, pl. 57. fig. 4 (1896).

Linota montium, *Baedeker, Eier Eur. Vög.* tab. 20. fig. 14 (1855-63).

Fringilla montium, *Hewitson, Eggs of Brit. Birds*, i. p. 203, pl. li. fig. iii (1856).

Linota flavirostris, *Dresser, Birds Eur.* iv. p. 59 (1876); *Ussher & Warren, Birds Ireland*, p. 66 (1900); *Dresser, Man. Pal. Birds*, pt. i. p. 313 (1902).

Acanthis flavirostris, *Sharpe, Cat. Birds B. M.* xii. p. 236 (1888); *Rey, Eier Vög. Mitteleurop.* p. 325, pl. 40. figs. 6-10 (1900).

Acanthis flavirostris flavirostris, *Hartert, Vög. Pal. Faun.* pt. i. p. 76 (1903).

Carduelis flavirostris, *Jourd. Eggs Europ. Birds*, p. 56, pl. 11. figs. 6-10 (1906).

Linaria flavirostris, *Sharpe, Hand-l.* v. p. 236 (1908).

The eggs of the Twite vary from .61 to .77 in length, and from .47 to .55 in breadth.

Nine eggs of the Rock-Sparrow are of a broad oval form and slightly glossy. They are dull white or pale grey, densely streaked, blotched, and marbled with umber-brown in some cases, and with purplish-brown and lilac in others. In some specimens the markings are very evenly distributed over the shell; in others they are extremely dense at the large end, where they form a cap, and sparse elsewhere. Examples measure from .8 to .92 in length, and from .6 to .64 in breadth.

Petronia maderensis, *Sharpe*, *Hand-l.* v. p. 243 (1909).

Eggs of the Madeira Rock-Sparrow are generally of a rather long oval shape and very glossy. They vary considerably in markings, and exactly resemble some of the commoner types of eggs laid by *Passer domesticus*. In all of them the ground-colour is white; the markings vary from a warm brown to purplish-grey, and either cover the entire shell, or are most numerous and heavy towards the larger end. The eggs range from .79 to .92 in length, and from .6 to .62 in breadth.

Gymnorhis flavicollis flavicollis, Hartert, *Vög. Pal. Faun.* pt. ii. p. 145 (1904).

The eggs of the Yellow-throated Sparrow vary in shape from a broad to a narrow oval and are moderately glossy. They are greenish-white, marked with streaks and blotches of dark umber-brown, chocolate-brown, purplish-grey, and dull lilac. In some eggs the markings are so dense as to entirely conceal the ground-colour, in others but little of this latter is visible, and in others again the markings are comparatively sparse and well defined, leaving about half the ground-colour visible. Numerous specimens measure from .66 to .8 in length, and from .5 to .58 in breadth.

Passer montana montana, *Hartert, Vög. Pal. Faun.* pt. ii. p. 160 (1904).

The eggs of the Tree-Sparrow vary in shape from a pointed to a blunt oval and have a moderate amount of gloss. The ground-colour is white, greyish-white or pale bluish-white, speckled and spotted, blotched, smeared or streaked, in some eggs sparingly but in the majority densely, with varying shades of brown and violet-grey. These markings are generally densest and darkest at the broad end, where they often form a cap or broad zone. In this, as in other Sparrows' eggs, a clutch seldom consists entirely of eggs quite of one type, one specimen generally differing markedly from the others in the distribution and density of the markings. The eggs taken by Swinhoe in Amoy are extremely varied in colour, the most remarkable type being a white egg with a dense rufous cap at the broad end.

Eggs of the Tree-Sparrow measure from $\cdot 7$ to $\cdot 86$ in length, and from $\cdot 48$ to $\cdot 6$ in breadth.

Passer domestica domestica, Hartert, Vög. Pal. Faun. pt. ii. p. 147 (1904).

The eggs of the House-Sparrow differ from those of the Tree-Sparrow in being larger in size and in having the markings, as a rule, more distinct and less dense. The markings are most commonly spots, specks, and blotches pretty sharply defined, and in many specimens quite half of the ground-colour is clearly visible. The disposition, shape, and varying shades of brown of the markings are, however, endless, and it is seldom that eggs even of the same clutch closely resemble each other, one or two being generally of a different type to the others. Numerous specimens measure from .68 to 1.0 in length, and from .56 to .65 in breadth.

Passer pyrrhonotus, *Blyth*.

Passer pyrrhonotus, *Sharpe, Cat. Birds B. M.* xii. p. 316 (1888); *Oates, Fauna Brit. Ind., Birds*, ii. p. 238 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 162 (1890); *Sharpe, Hand-l.* v. p. 247 (1909).
Passer domestica pyrrhonotus, *Hartert, Vög. Pal. Faun.* pt. ii. p. 151 (1904).

The eggs of the Rufous-backed Sparrow are inseparable from those of the Tree-Sparrow. Of three specimens in the Collection, two are densely streaked and mottled, leaving little of the ground-colour visible. A third example is blotched and clouded with brown and grey on a whitish ground, fully one-half of which is exposed to view. They measure respectively: .7 by .5; .69 by .51; .67 by .52.

- Passer flückigeri*, *Sharpe, Hand-l.* v. p. 248 (1909).

The eggs of the Spanish Sparrow are very uniform, and agree closely with some of the eggs of the House-Sparrow. The ground-colour is bluish- or greyish-white; and the markings, which are very distinct and well-defined, consist of spots and small blotches of dark brown and underlying lavender-grey distributed over the entire shell, but more thickly on the larger half of the egg than elsewhere. They measure from .8 to 1.0 in length, and from .58 to .66 in breadth.

Passer yatei, Sharpe.

Passer yatii, Sharpe, *Cat. Birds B. M.* xii. p. 322 (1888); Dresser, *Man. Pal. Birds*, pt. i. p. 291 (1902); *id.*, *Ibis*, 1903, p. 405, pl. x. figs. 1-4.

Passer moabiticus yatii, Hartert, *Vög. Pal. Faun.* pt. ii. p. 155 (1904).

Passer yatei, Sharpe, *Hand-l.* v. p. 250 (1909).

Three eggs of Yate's Sparrow are of a rather pointed oval shape and fairly glossy. The ground-colour is dull white, densely and finely freckled all over with dull purplish-grey. Two measure respectively .7 by .5 and .73 by .5.

- | | |
|--|---------------------------|
| 3. Seistan, E. Persia (<i>N. Sarudny</i>). | H. E. Dresser, Esq. [E.]. |

Passer motitensis, Smith.

(Plate X. fig. 1.)

Passer motitensis, Andersson, *B. Damaryl.* p. 186 (1872); Sharpe, *Cat. Birds B. M.* xii. p. 324 (1888); Stark, *Faun. S. Afr., Birds*, i. p. 162 (1900); Shelley, *Birds Afr.* iii. p. 244 (1902); Reichenow, *Vög. Afr.* iii. p. 240 (1904); Sharpe, *Hand-l.* v. p. 250 (1909).

Two eggs of the Damara-land Sparrow are of a rather broad oval form and slightly glossy. They are white, sparsely spotted with brownish-grey and lavender-grey round the larger end, and in the specimen figured there are a few scattered spots over the rest of the shell. They measure respectively .82 by .6 and .8 by .61.

- | | |

| 2. Arljab River, Damara-land, 22nd
Oct. (<i>C. J. Andersson: Tristram
Coll.</i>). | Crowley Bequest. |
|--|------------------|

Passer ruficinctus, Fischer & Reichenow.

Passer ruficinctus, Sharpe, *Cat. Birds B. M.* xii. p. 325 (1888); *Nehrk. Kat. Eiersamml.* p. 109 (1899); *Reichenow, Vög. Afr.* iii. p. 241 (1904); *Sharpe, Hand-l.* v. p. 251 (1908).

Three eggs of Fischer's Sparrow are of a broad oval shape and slightly glossy. The ground-colour is dull white or yellowish-white, blotched and spotted with pale chocolate-brown and with underlying clouded markings of violet-grey. They measure respectively .75 by .58, .78 by .59, and .78 by .6.

3. Lake Naivasha, B. E. Africa, F. J. Jackson, Esq., C.B. [C.].
7th July.

Passer ammodendri, Severtz.

Passer ammodendri, Sharpe, *Cat. Birds B. M.* xii. p. 337 (1888); ? *Nehrk. Kat. Eiersamml.* p. 109 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 292 (1902); *id.*, *Ibis*, 1903, p. 406, pl. x. figs. 5-8; *Sharpe, Hand-l.* v. p. 251 (1908).

Passer ammodendri ammodendri, Hartert, *Vög. Pal. Faun.* pt. ii. p. 158 (1904).

Three eggs of the Saxaul Sparrow are of a broad, slightly pointed oval form and distinctly glossy. They are white, profusely and irregularly marked and freckled all over with yellowish-brown, which by no means hides the ground-colour. They measure respectively .86 by .63, .91 by .62, and .90 by .64.

The two eggs from Kuldja (Nehrkorn Coll.) have, in my opinion, been wrongly identified, and are probably those of some species of Lark, perhaps of *Alaudula heinei* or some species of *Galerida*, which they closely resemble. Nehrkorn, in describing these eggs, noted that they were remarkably Lark-like in appearance.

3. Saxaul Steppe, Turkestan, 15th W. Radcliffe Saunders, Esq.
June. [P.]

[2. Kuldja, Mongolia (Nehrkorn Coll.). Crowley Bequest.]

Passer saharæ, Erlanger.

Corospiza simplex, Loche, *Expl. Sci. Algér.*, Ois. i. p. 138 (1867).

Passer simplex, Dresser, *Birds Eur.* iii. p. 603 (1876); *Sharpe, Cat. Birds B. M.* xii. p. 339 (1888) [part.]; *Nehrk. Kat. Eiersamml.* p. 109 (1899); *Whitaker, Birds Tunis.* i. p. 208 (1905).

Passer simplex saharæ, Hartert, *Vög. Pal. Faun.* pt. ii. p. 163 (1904).

Passer saharæ, Sharpe, *Hand-l.* v. p. 251 (1908).

The eggs of the Desert-Sparrow taken by Loche in Algeria are of a broad oval form and possess a small amount of gloss. They are dull white, speckled and spotted with brown and lavender-grey. These markings are dense on the larger half of the egg and form a wreath or irregular zone round the broad end, or, sometimes, an

indistinct cap. Five examples measure from .8 to .84 in length, and from .6 to .64 in breadth.

5. Algeria (*Loche*).

Seeböhm Coll.

Passer swainsoni (*Rüpp.*).

Passer swainsoni, *Sharpe, Cat. Birds B. M.* xii. p. 334 (1888); *Reichenow, Vög. Afr.* iii. p. 228 (1904); *Sharpe, Hand-l.* v. p. 252 (1908).

Passer diffusus, *Shelley, Birds Afr.* iii. p. 251 (1902) [part.].

Five eggs of Swainson's Sparrow resemble some of those of *P. domesticus*. They measure from .79 to .8 in length, and from .58 to .62 in breadth.

1. N.E. Africa (*Nehr Korn Coll.*).

Crowley Bequest.

4. Harar, S. Abyssinia, 16th June.

Mr. P. Zaphiro [C.].

Genus *ALARIO*, *Bonap.*

Alario alario (*Linn.*).

(Plate X. fig. 15.)

Alario alario, *Sharpe, Cat. Birds B. M.* xii. p. 346 (1888); *Stark, Fauna S. Afr., Birds*, i. p. 179 (1900); *Reichenow, Vög. Afr.* iii. p. 246 (1904) [part.]; *Sharpe, Hand-l.* v. p. 253 (1908).

Serinus alario, *Shelley, Birds Afr.* iii. p. 213 (1902).

Eight eggs of the Mountain Canary vary in shape from a broad to a somewhat pointed oval and are almost devoid of gloss. They are white or pale bluish-white with small scattered spots, scrolls, and streaks of chocolate-brown and reddish-lilac, these markings being almost entirely confined to the larger end. They measure from .61 to .66 in length, and from .46 to .48 in breadth.

8. Pondoland, S. Africa.

Crowley Bequest.

Alario leucolæma, *Sharpe.*

Alario leucolæma, *Sharpe, Bull. B. O. C.* xiii. no. xcix. p. 80 (1903); *id., Hand-l.* v. p. 253 (1908).

Five eggs of the Western Mountain Canary are of a somewhat pointed oval shape and distinctly glossy. They are much like those of *A. alario* but larger, and the markings are of a deep chocolate-brown. In one specimen most of the markings take the form of fine interlaced lines and tracings, forming a zone round the larger end. They vary from .68 to .78 in length, and from .45 to .54 in breadth.

5. Namaqualand, S.W. Africa.

Crowley Bequest.

Genus **AURIPASSER**, *Bonap.***Auripasser euchlorus**, *Bonap.*

(Plate X. figs. 17 & 18.)

Passer euchlorus, *Sharpe, Cat. Birds B. M.* xii. p. 341 (1888); *Yerbury, Ibis*, 1896, p. 27; *Nehrk. Kat. Eiersamm.* p. 109 (1899); *Ogilvie Grant, Nov. Zool.* vii. p. 246 (1900); *Shelley, Birds Afr.* iii. p. 259 (1902).

Auripasser euchlorus, *Reichenow, Vög. Afr.* iii. p. 250 (1904); *Sharpe, Hand-l.* v. p. 253 (1908).

The eggs of the Arabian Yellow Sparrow taken by Colonel Yerbury are not separable from many of the eggs of *Passer montanus*. They are of an ordinary oval form and slightly glossy. The ground-colour is greyish-white, streaked and blotched with ashy-brown and underlying lavender-grey. Three examples measure respectively: .72 by .52; .73 by .51; .68 by .5.

3. Aden, Arabia, May.

Col. J. W. Yerbury [P.].

Genus **SORELLA**, *Hartl.***Sorella emini**, *Hartl.*

(Plate X. fig. 14.)

Passer emini, *Sharpe, Cat. Birds B. M.* xii. p. 332 (1888); *Shelley, Birds Afr.* iii. p. 256 (1902).

Auripasser emini, *Reichenow, Vög. Afr.* iii. p. 248 (1904).

Sorella emini, *Sharpe, Hand-l.* v. p. 253 (1908).

Eggs of Emin's Sparrow are of a regular oval shape or slightly pointed at one end, and almost devoid of gloss. The ground-colour is white or pale bluish-white somewhat sparingly spotted with brownish-black, grey, and lilac. They vary from .65 to .76 in length, and from .49 to .54 in breadth.

4. Njemps, Lake Baringo, B. E. Africa, F. J. Jackson, Esq., C.B. [C.].
16th July.

4. Njemps, 16th July. F. J. Jackson, Esq., C.B. [C.].

4. Njemps, 16th July. F. J. Jackson, Esq., C.B. [C.].

Genus **POLIOSPIZA**, *Bonap.***Poliospiza albigularis** (*Smith*).

Crithagra albigularis, *Sharpe, ed. Layard, Birds S. Africa*, p. 485 (1875-84).

Serinus albigularis, *Sharpe, Cat. Birds B. M.* xii. p. 360 (1888); *Nehrk. Kat. Eiersamm.* p. 110 (1899); *Stark, Fauna S. Afr., Birds*, i. p. 174 (1900); *Shelley, Birds Afr.* iii. p. 223 (1902).

Poliospiza albigularis, *Reichenow, Vög. Afr.* iii. p. 252 (1904); *Sharpe, Hand-l.* v. p. 254 (1908).

Four eggs of the White-throated Finch closely resemble the eggs *Serinus sulphuratus*. Two examples are spotted with chocolate-brown only; two others are marked both with chocolate-brown and with lilac. They measure respectively: .81 by .55; .79 by .6; .85 by .58; .8 by .6.

4. South Africa.

E. L. Layard, Esq. [P.].

Poliospiza crocopygia (*Sharpe*).

(Plate X. fig. 10.)

Serinus crocopygius, *Sharpe, Cat. Birds B. M.* xii. p. 360 (1888)
Shelley, Birds Afr. iii. p. 222 (1902).

Poliospiza crocopygia, *Reichenow, Vög. Afr.* iii. p. 253 (1904); *Sharpe, Hand-l.* v. p. 254 (1908).

Five eggs of the Damaraland White-throated Finch are of a rather wide and somewhat pointed oval shape and moderately glossy. The ground-colour is white, with spots, blotches, and irregular markings of deep chocolate, umber-brown, and faint underlying lilac-grey, arranged in a ring round the larger end. They measure from .74 to .81 in length, and from .58 to .59 in breadth.

5. Otjimbingue, Damaraland, 12th Jan. Crowley Bequest.
(*C. J. Andersson: Tristram Coll.*).

Poliospiza leucopygia (*Sundev.*).

Serinus leucopygius, *Sharpe, Cat. Birds B. M.* xii. p. 366 (1888); *Shelley, Birds Afr.* iii. p. 216 (1902).

Poliospiza leucopygia, *Reichenow, Vög. Afr.* iii. p. 255 (1904); *Sharpe, Hand-l.* v. p. 255 (1908).

Two eggs of the White-rumped Canary laid in captivity are of a long oval shape and slightly glossy. Both are white: one is sparingly marked about the larger end with very small spots and dots of blackish-brown; in the other the markings are indicated by very minute dots. They measure respectively .64 by .44 and .65 by .43.

2. Laid in captivity.

Crowley Bequest.

Poliospiza gularis (*Smith*).

Poliospiza gularis, *Sharpe, ed. Layard, Birds S. Africa*, p. 482 (1875-84); *id., Cat. Birds B. M.* xii. p. 343 (1888); *Nehrke, Kat. Eier-samm.* p. 109 (1899); *Stark, Fauna S. Afr., Birds*, i. p. 165 (1900); *Shelley, Birds Afr.* iii. p. 226 (1902); *Reichenow, Vög. Afr.* iii. p. 258 (1904); *Sharpe, Hand-l.* v. p. 256 (1908).

Four eggs of the Streaky-headed Seed-eater are of a somewhat

pointed oval shape and moderately glossy. They are bluish-white, and two are sparingly spotted at the broad end with deep chocolate-brown, while the others are almost uniform. They measure respectively: $\cdot 73$ by $\cdot 55$; $\cdot 75$ by $\cdot 55$; $\cdot 78$ by $\cdot 58$; and $\cdot 83$ by $\cdot 57$.

Genus **SYCALIS**, *Boie*.**Sycalis flaveola** (*Linn.*)

Sycalis flaveola, *Sharpe, Cat. Birds B. M.* xii. p. 377 (1888); *Nehrck. Kat. Eiersamml.* p. 110 (1899); *Euler, Rev. Mus. Paulista*, iv. p. 26 (1900); *Ihering, Rev. Mus. Paulista*, iv. p. 214 (1900); *Berlepsch & Hartert, Nov. Zool.* ix. p. 27 (1902); *Sharpe, Hand-l.* v. p. 261 (1908).

Two eggs said to be those of the Yellow Seed-Finch are of a regular or slightly pointed oval form and faintly glossy. The ground-colour is pale greenish-white, very finely spotted all over with maroon-red and lilac-grey, the markings being concentrated towards the larger end and forming, in one specimen, especially, a rather strongly marked cap. They measure respectively .78 by .59 and .8 by .6.

Sycalis pelzelni, *Sclater*.

(Plate X. fig. 9.)

Sycalis pelzelni, *Durnford, Ibis*, 1877, p. 172; *Sharpe, Cat. Birds B. M.* xii. p. 380 (1888); *Scl. & Huds. Argent. Orn.* i. p. 66 (1889); *Holland, Ibis*, 1892, p. 197; *Nehrck. Kat. Eiersamml.* p. 110 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 214 (1900); *Sharpe, Hand-l.* v. p. 261 (1908).

Eggs of Pelzelni's Seed-Finch are of a pointed oval shape and nearly devoid of gloss. Those in the Collection are of two types. In one the ground is cream-colour, very thickly streaked and mottled all over with brown and greyish-brown. In a second the ground-colour is pale green, streaked and blotched, but not very densely, with brown and lavender-grey. They measure from .78 to .85 in length, and from .5 to .57 in breadth.

Sycalis arvensis, *Kittl.*

Sycalis arvensis, *Dalgleish, Proc. R. Phys. Soc. Edinb.* viii. p. 84 (1883-5); *Sharpe, Cat. Birds B. M.* xii. p. 382 (1888); *James, New List Chilean Birds*, p. 2 (1892); *Lane, Ibis*, 1897, p. 24; *Nehrck. Kat. Eiersamml.* p. 111 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 214 (1900); *Sharpe, Hand-l.* v. p. 262 (1908).

Sycalis luteola, *Scl. & Huds. Argent. Orn.* i. p. 69 (1889); *Holland, Ibis*, 1892, p. 197.

Eggs of the Misto Seed-Finch vary from a narrow to a broad oval shape and possess a moderate amount of gloss. They are white or pale bluish-white, thickly speckled, mottled and, in some

cases, blotched with rather bright reddish-brown and underlying purplish-grey. The markings are usually very dense at the broad end of the egg, where they often form a more or less well-defined cap. Two eggs of this species in the Collection are of abnormal size, measuring respectively $\cdot 8$ by $\cdot 63$; $\cdot 83$ by $\cdot 67$. Normal specimens measure from $\cdot 64$ to $\cdot 8$ in length, and from $\cdot 5$ to $\cdot 57$ in breadth.

- Carpodacus erythrina erythrina*, *Hartert, Vög. Pal. Faun.* pt. i. p. 106 (1903).

Eggs of the Scarlet Rose-Finch are of a pointed oval form and possess a considerable amount of gloss. They are of a clear blue colour, marked, almost entirely at the broad end, with specks and spots of dark chocolate-brown. Some specimens are also marked at the large end with a few spots and blotches of lilac. Occasionally the markings are extremely fine and hair-like, and sometimes they are somewhat large and tend to form a zone or a small cap at the broad end. They measure from $\cdot 7$ to $\cdot 86$ in length, and from $\cdot 53$ to $\cdot 6$ in breadth.

- Loxia curvirostra scotica*, *Hartert, Vög. Pal. Faun.* pt. ii. p. 120 (1904); *Jourd. Eggs Europ. Birds*, p. 75, pl. 26, fig. 8 (1906).
- Loxia scotica*, *Sharpe, Hand-l.* v. p. 269 (1908).

Eggs of the Common Crossbill are usually of a regular oval form, but sometimes they are much pointed. They have a considerable amount of gloss. The ground-colour varies from white to pale greenish-blue, and this is marked, chiefly at the larger end, with spots, specks, small blotches, and short crooked lines of deep chocolate-brown or reddish-brown and underlying lilac. These markings sometimes form a wreath round the larger end of the egg, or an ill-defined cap, but as a rule they are sparse and scattered. Specimens measure from .8 to .96 in length, and from .6 to .68 in breadth.

The eggs of the Common Bullfinch are of a pointed oval form and moderately glossy. The ground-colour is bluish-green, spotted and blotched with chocolate or reddish-brown and underlying lilac. The markings, which sometimes include short lines and streaks, are generally dense at the large end, where they form a zone or cap, and rather sparse elsewhere. The Collection contains a set of white eggs from Invermoriston. Specimens measure from .7 to .85 in length, and from .53 to .6 in breadth.

Three eggs from Cassel, Germany, are abnormally small. They measure respectively : .55 by .42 ; .59 by .49 ; and .62 by .5.

Pinicola enucleator enucleator, *Hartert, Vög. Pal. Faun.* pt. ii. p. 114 (1904).

Eggs of the Pine-Grosbeak are mostly of an elongate oval form and are usually rather glossy. The ground-colour is greenish-blue, boldly spotted and blotched with chocolate and reddish-brown and underlying lilac-grey. The markings are distributed over the entire shell, but they are denser and larger over the broader half of the egg, where they often form a zone and are more or less confluent. Specimens measure from .98 to 1.12 in length, and from .67 to .72 in breadth.

Genus PYRRHULORHYNCHA, Giglioli.**Pyrrhulorhyncha pyrrhuloides (Pull.).**

Pyrrhulorhyncha pyrrhuloides, *Sharpe, Cat. Birds B. M.* xii. p. 475 (1888); *id. Hand-l.* v. p. 275 (1909).

Scoenicola scoenicius pyrrhuloides, *Rey, Eier Vög. Mitteleurop.* p. 293, pl. 123. fig. 3 (1904).

Emberiza pyrrhuloides, *Dresser, Man. Pal. Birds*, pt. i. p. 372 (1902); *Jour. Eggs Europ. Birds*, p. 116, pl. 15. fig. 3 (1906).

Emberiza pyrrhuloides pyrrhuloides, *Hartert, Vög. Pal. Faun.* pt. ii. p. 198 (1904).

Eggs of the Thick-billed Reed-Bunting are of a broad pointed oval shape and distinctly glossy. They closely resemble those of *Emberiza scoenicius*, and the ground-colour is purplish-grey, olive-grey or clay-colour, more or less heavily marked with twisted and knotted lines and spots of deep chocolate-brown which are often

blurred at the edges and shade off into the surrounding ground-colour. Pale violet-grey underlying markings are usually present. They measure from .78 to .83 in length, and from .58 to .6 in breadth.

Schœnicola schœniclus, *Rey, Eier Vög. Mitteleurop.* p. 292, pl. 38. figs. 2-6 (1900).

Emberiza schœniclus schœniclus, *Hartert, Vög. Pal. Faun.* pt. ii. p. 194 (1904).

Eggs of the Reed-Bunting are of a broad, pointed oval form and have a considerable amount of gloss. The ground-colour varies from olive-grey to a purplish-clay-colour, and is spotted and more or less covered with a tracery of coarse twisted and knotted lines of a dark purplish-brown colour, almost black at times. These spots and lines are frequently blurred at the edges and run into the surrounding ground-colour, and are coarser and more numerous at the larger end of the egg than elsewhere. The underlying markings consist of smaller spots and finer lines of violet-grey. As a rule there is a great uniformity among the eggs of this Bunting, but in one clutch from Tilford, the ground-colour of three of the eggs is pale greenish-blue, while in a fourth it is nearly pure white. The markings consist of spots and blotches of pale violet-grey and brownish-grey, and on three of the eggs there is an irregular black hairline across the broad end, where the markings are most numerous. They measure from .7 to .85 in length, and from .54 to .6 in breadth.

Schœnicola pusilla, Rey, *Eier Vög. Mitteleurop.* p. 294, pl. 123, fig. 6 (1904).

The eggs of the Little Bunting are of a broad oval form, somewhat sharply pointed and slightly glossy. The ground-colour is variable. In some eggs it is lavender-grey; in others pale ashy-blue or pale green, and in others again pale pinkish-buff. The markings are more uniform, consisting of spots, streaks and twisted lines of rich purplish-brown or reddish-brown, so intense at times as to appear almost black. These surface-markings are more or less blurred at the edges and blend with the surrounding ground-colour. The underlying shell-markings consist of blotches and clouds of lavender- or lilac-grey. Numerous eggs measure from .65 to .79 in length, and from .52 to .6 in breadth.

Euspiza rustica, *Rey, Eier Vög. Mitteleurop.* p. 297, pl. 38. fig. 7 (1900).

Eggs of the Rustic Bunting are of a blunt oval shape and moderately glossy. Two eggs have the ground-colour pale greyish-green, mottled all over with two shades of greenish-brown and a black hair-line across the larger end. Under these markings, which are very thickly disposed over the shell, may be detected traces of underlying greyish spots. Eight eggs have the ground-colour pale blue or greenish-blue, spotted and blotched, especially towards the larger end, with olive-brown and lavender-grey, the latter colour forming a more or less distinct zone round the broad end. They measure from .78 to .81 in length, and from .55 to .61 in breadth.*

Eggs of the Grey-headed Bunting vary from a broad oval to a

* Baedeker's figures of the eggs of this Bunting are good, but Bree's reproduction of one of them is altogether wrong and unrecognizable. Mr. Dresser's description of the eggs in the 'Birds of Europe' applies to those of some other species of Bunting, and he was evidently misled by his correspondent. He subsequently obtained genuine eggs. (*Cf.* Newton, *l. c.*)

nearly circular form and are distinctly glossy. The ground-colour is white or yellowish-white and the markings are of two types. In five clutches the entire surface of the shell is more or less thickly and finely mottled all over with dull reddish-brown or purplish-brown and underlying violet-grey. In two other clutches the markings take the form of distinct spots and small blotches of reddish-brown and pale lilac, and one has additional fine irregular lines and spots of burnt-sienna. They measure from .72 to .82 in length, and from .58 to .65 in breadth. The roundest egg measures .75 by .65.

Emberiza fucata arcuata, Hartert, *Vög. Pal. Faun.* pt. ii. p. 187 (1904).

Two eggs of the Himalayan Grey-headed Bunting taken at Simla are of a regular oval or pointed oval shape and moderately glossy. They are pale greenish-grey, densely speckled and mottled all over with very pale umber-brown and underlying grey. The markings are more dense at the large end than elsewhere and form an ill-defined cap. They measure respectively: .85 by .57; .79 by .56.

Emberiza chrysophrys, *Pall.*

(Plate XI. figs. 6 & 7.)

Emberiza chrysophrys, *Sharpe*, *Cat. Birds B. M.* xii. p. 498 (1888); *Dresser, Man. Pal. Birds*, pt. i. p. 356 (1902); *Hartert, Vög. Pal. Faun.* pt. ii. p. 189 (1904); *Journ. Eggs Europ. Birds*, p. 113 (1906); *Sharpe, Hand-l.* v. p. 278 (1909).

Three out of the four eggs of the Yellow-browed Bunting in the Collection are very similar to the eggs in the last-mentioned clutch of *E. fucata*, described above. They are of a very broad oval shape and distinctly glossy. The ground-colour is white, clouded with pale lilac-grey, and smudged with pale umber-brown and with irregular lines, dashes, and spots of dark umber-brown. In the fourth egg (fig. 6) the whole surface is heavily clouded with pale umber-brown, the lilac-grey markings being hardly apparent, though the dark markings are similar to those in the other three eggs of the clutch. They measure from $\cdot 68$ to $\cdot 73$ in length, and from $\cdot 57$ to $\cdot 58$ in breadth.

The eggs of the Black-headed Bunting vary in shape from a broad to an excessively long narrow oval and are moderately glossy. They are very pale greenish-blue, varying somewhat in shade, speckled and spotted all over with dull reddish-brown and underlying lavender-grey, the markings being more dense at the larger end. On some eggs the spots are large and might almost be termed blotches; on others they are all fine; while sometimes both large and small markings are combined on the same specimen. The eggs vary greatly in size, measuring from .82 to 1.03 in length, and from .6 to .7 in breadth.

Eggs of the Red-headed Bunting closely resemble those of *E. melanocephala*. They are of a broad oval shape and have a considerable amount of gloss. The ground-colour is very faint bluish-white, minutely speckled or spotted all over with umber-brown and underlying lilac-grey, the markings in some specimens forming an irregular wreath round the broad end. They measure from .78 to .90 in length, and from .57 to .63 in breadth.

The eggs of the Yellow-breasted Bunting are mostly of a broad oval form and have a considerable amount of gloss. They are very variable. Some are quite inseparable from eggs of *E. schoeniclus*. Others are greyish-green, blotched and smeared with two shades of olive-brown, and some underlying lavender-grey, and with some spots and short lines of deep brown or black. Others again are purplish-grey marked with spots, specks, and lines of deep purplish-brown and clouds and smears of lilac-grey. They measure from .72 to .85 in length, and from .58 to .62 in breadth.

Emberiza citrinella citrinella, *Hartert, Vög. Pal. Faun.* pt. ii. p. 167 (1904).

The eggs of the Yellow Bunting or Yellow Ammer are of a broad oval form and are frequently highly glossy. The ground-colour varies from purplish-white to pale pinkish-buff. The markings consist chiefly of spots and an intricate network of lines of a deep purplish-brown or black. The spots are generally small

and few in number; the lines vary in thickness from that of the finest hair to that of an ordinary pin and are distributed in a very irregular manner over the whole shell, but they are more numerous and more tangled at the broad end of the egg than elsewhere. The shell-markings, which are sometimes very prominent, are pearly-grey in colour and in some specimens consist of clouds and smears, causing a marbled appearance, and in others of specks and fine lines only. The eggs measure from .8 to .95 in length, and from .6 to .68 in breadth.

Some curious abnormally shaped eggs of this species were received in the Crowley Bequest.

***Emberiza sulphurata*, Temm. & Schl.**

(Plate XI. fig. 8.)

Emberiza sulphurata, *Blakist. & Pryer, Birds Japan*, p. 171 (1882); *Sharpe, Cat. Birds B. M.* xii. p. 519 (1888); *Seebohm, Birds Japan. Emp.* p. 135 (1890); *Nehrke, Kat. Eiersamml.* p. 112 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 351 (1902); *Hartert, Vöj. Pal. Faun.* pt. ii. p. 178 (1904); *Sharpe, Hand-l.* v. p. 280 (1909).

The eggs of Siebold's Bunting are of an ordinary oval shape and more or less glossy. They are of a pale brownish-white colour, smeared and mottled with lavender-grey and pale brown, and also marked with spots, streaks, and short twisted lines of chocolate-brown, the edges of which more or less blend with the surrounding colours. Specimens measure from .72 to .78 in length, and from .55 to .6 in breadth.

Emberiza personata, Temm.

(Plate XI. figs. 9-11.)

Emberiza personata, *Blakist. & Pryer, Birds Japan*, p. 170 (1882); *Sharpe, Cat. Birds B. M.* xii. p. 521 (1888); *Seebohm, Birds Japan. Emp.* p. 136 (1890); *Tucz. Faune Orn. Sibér. Orient.* p. 567 (1891); *Nehr. Kat. Eiersamml.* p. 112 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 350 (1902); *Sharpe, Hand-l.* v. p. 280 (1909).

Emberiza spodocephala personata, *Hartert, Vög. Pal. Faun.* pt. ii. p. 177 (1904).

Three eggs procured by Pryer and said to be those of Temminck's Japanese Bunting are of the same type as those of *E. sulphurata* and may be of that species. They differ in having the ground-colour greyish-white and the surface-markings larger, better defined, and of a darker chocolate-brown. The shell-markings also cover less of the ground-colour. Five other clutches are of a very different type, the ground-colour is pale greenish-white more or less heavily blotched all over with maroon-brown, purplish-brown, and purplish-grey, with irregular lines, spots, and even blotches of deep purplish-brown scattered over the shell. They measure from .74 to .8 in length, and from .57 to .62 in breadth.

Emberiza spodocephala, Pall.

Emberiza spodocephala, *Sharpe, Cat. Birds B. M.* xii. p. 522 (1888); *Nehr. Kat. Eiersamml.* p. 113 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 350 (1902); *id. Ibis*, 1904, p. 109, pl. iii. figs. 10 & 12; *Sharpe, Hand-l.* v. p. 280 (1909).

Emberiza spodocephala spodocephala, *Hartert, Vög. Pal. Faun.* pt. ii. p. 176 (1904).

Eggs of the Black-faced Bunting are of a broad, rather pointed oval shape and more or less glossy. The ground-colour varies from pale greenish-white to pinkish-white. The markings vary greatly. Some eggs are like those of *E. personata*, heavily blotched and spotted all over with maroon-brown, purple-brown, or umber-brown and purple-grey, and have often irregular darker markings scattered over the shell. Other eggs are clouded and mottled over the entire shell with umber-brown or dull maroon. Two eggs from Sidemi, received in the Crowley Bequest under the name of *E. sulphurata*, are of quite a different type and in colour and markings resemble eggs of *E. chrysophrys*, described from the same locality. They are, however, of a much narrower and more pointed oval shape. Possibly

these two eggs are wrongly identified and should be referred to the latter species. The eggs measure from $\cdot 7$ to $\cdot 8$ in length, and from $\cdot 55$ to $\cdot 62$ in breadth.

Eggs of the Ortolan Bunting are of an extremely broad oval form and highly glossy. They are greenish-white in some cases, greyish-pink in others, spotted, streaked, and blotched with rich purplish or chocolate-brown. A few specimens are beautifully marked with a delicate tracery of fine lines round the broad end, forming a wreath or zone, but the majority are marked with spots and short streaks only. The underlying markings are purplish-grey, but they are faint and indistinct. The eggs measure from .71 to .8 in length, and from .57 to .67 in breadth.

Emberiza cæsia, *Tristram, Ibis*, 1867, p. 367; *Dresser, Birds Eur.* iv. p. 213 (1871); *Bree, Birds Eur.* 2nd ed. iii. p. 149, pl. (1875); *Sharpe, Cat. Birds B. M.* xii. p. 535 (1888); *Rey, Eier Vög. Mittel-europ.* p. 290, pl. 37. figs. 21, 22 (1900); *Dresser, Man. Pal. Birds*,

pt. i. p. 358 (1902); *Hartert, Vög. Pal. Faun.* pt. ii. p. 182 (1904); *Jourd. Eggs Europ. Birds*, p. 108, pl. 13. figs. 21, 22 (1906); *Sharpe, Hand-l.* v. p. 281 (1909).

Eggs of Cretzschmar's Bunting vary from a rather broad to a very broad oval form, and have a moderate amount of gloss. The ground-colour is greyish-white, with sometimes a tinge of pink or brownish-pink, marked all over with spots, scratches, and small blotches of deep chocolate-brown and some faint grey underlying smears. They measure from .69 to .8 in length, and from .55 to .62 in breadth.

Emberiza stewarti, Blyth.

Emberiza stewarti, *Wardlaw-Ramsay, Ibis*, 1880, p. 64; *Sharpe, Cat. Birds B. M.* xii. p. 547 (1888); *Oates, Fauna Brit. Ind., Birds*, ii. p. 256 (1890); *id.*, ed. *Hume, Nests & Eggs Ind. Birds*, ii. p. 167 (1890); *Nehr. Kat. Eiersamml.* p. 113 (1899); *Dresser, Man. Pal. Birds*, pt. i. p. 367 (1902); *id.*, *Ibis*, 1904, p. 110, pl. iii. fig. 14; *Hartert, Vög. Pal. Faun.* pt. ii. p. 179 (1904); *Sharpe, Hand-l.* v. p. 281 (1909).

The eggs of the White-capped Bunting are of a regular oval form and moderately glossy. The ground-colour is white, tinged with blue or grey, and thickly mottled with purplish-grey, over which are scattered many spots and blotches of very deep reddish or purplish-brown. Both the grey underlying and the brown surface-markings are very evenly spread over the entire shell, and there is no tendency whatever to the formation of a cap at the broad end. Specimens measure from .7 to .8 in length, and from .57 to .61 in breadth.

Emberiza cia cia, *Hartert, Vög. Pal. Faun.* pt. ii. p. 183, fig. 36 (1904).

The eggs of the Meadow-Bunting and its allies are somewhat of the same type as the eggs of *E. citrinella* and *E. cirrus*, but may be separated from them and, indeed, from the eggs of all the other Buntings in the Collection by reason of the delicate and intricate tracery of fine lines, which constitute the markings. The ground-colour is bluish-white, purplish-white, or very pale stone-colour, and is covered, more thickly on the broader half of the egg than elsewhere, with a multitude of hair-like lines of deep purplish-brown which wind round the egg several times without a break and generally form a tangled cap or zone. There are but few spots or blotches. The underlying markings consist of smears and veins of purplish-grey.

The eggs of the Meadow-Bunting measure from .8 to .92 in length, and from .6 to .65 in breadth.

Faun.* pt. ii. p. 169 (1904); *Jourl. Eggs Europ. Birds*, p. 100, pl. 14. fig. 1 (1906); *Sharpe, Hand-l.* v. p. 283 (1909).

Emberiza pithyornus, Gmel.; *Bree, Birds Eur.* 2nd ed. iii. p. 145, pl. (1875).

The eggs of the Pine-Bunting are of a broad oval form and moderately glossy. They are pinkish cream-colour, profusely marked with dots, specks, streaks and fine lines of rich purplish-brown. On some specimens the lines are short and, as a rule, very fine; on others they are long, forming loops and knots and often encircling the egg. The underlying markings, which are faint and inconspicuous, consist of small smears and spots of lilac-grey. The eggs measure from .78 to .87 in length, and from .6 to .68 in breadth.

- Emberiza calandra calandra*, *Hartert, Vög. Pal. Faun.* pt. ii. p. 165 (1904).

The eggs of the Common or Corn-Bunting vary in shape from a narrow to a broad oval, and have a considerable amount of gloss. The ground-colour is sometimes bluish-white, at others creamy, and very frequently of a pinkish stone-colour. The markings, which consist of spots, blotches, streaks and lines, both fine and thick, of very dark purplish-brown or chocolate-brown, are boldly disposed over the broader half of the egg and sparingly elsewhere. Many specimens are very profusely marked with blotches and smears of lilac- and lavender-grey, while others have these underlying markings almost entirely wanting. The eggs measure from .87 to 1.04 in length, and from .63 to .74 in breadth.

Genus FRINGILLARIA, Swains.

Fringillaria capensis (Linn.).

(Plate XI. figs. 18 & 19.)

Fringillaria capensis, *Sharpe, ed. Layard, Birds S. Africa*, p. 489 (1875-84); *id., Cat. Birds B. M.* xii. p. 565 (1888); *Nehrk. Kat. Eiersamml.* p. 113 (1899); *Stark, Fauna S. Afr., Birds*, i. p. 187 (1900); *Shelley, Birds Afr.* iii. p. 156 (1902); *Reichenow, Vög. Afr.* iii. p. 288 (1904); *Sharpe, Hand-l.* v. p. 284 (1909).

Eggs of the Cape Bunting are of a regular oval shape and slightly

glossy. The ground-colour is white or very pale bluish-white, densely speckled and blotched with pale reddish-brown and lavender-grey. The markings sometimes coalesce over the broad end of the egg so as to form a cap. They measure from .75 to .8 in length, and from .58 to .59 in breadth.

- | | |

| 6. South Africa (<i>E. L. Layard</i>). | Crowley Bequest. |
| 1. South Africa. | E. L. Layard, Esq. [P.]. |
| 3. Deelfontein, Cape Colony, 19th Nov. (<i>E. Seimund</i>). | Col. A. T. Sloggett [P.]. |

Fringillaria insularis, *Grant & Forbes*.

(Plate XI. figs. 20 & 21.)

Fringillaria insularis, *Grant & Forbes*, *Bull. Liverp. Mus.* ii. no. 1, p. 2 (1900); *id.* *Nat. Hist. Sokotra*, p. 29 (1903); *Sharpe, Hand-l.* v. p. 285 (1909).

Eggs of the Sokotra Rock-Bunting closely resemble those of *F. striolata*. The ground-colour is greenish-white; and while in one clutch the eggs are very densely mottled and blotched with dark brown and lavender-grey, in the second clutch they are densely but distinctly speckled with reddish-brown and purplish-grey. Five examples measure from .7 to .75 in length, and from .51 to .55 in breadth.

- | | |
|--|---------------------|
| 3. Homhil, E. Sokotra, 1500 feet, 24th Jan. (<i>W. R. Ogilvie-Grant & H. O. Forbes</i>). | Royal Society [P.]. |

Fringillaria striolata (*Licht.*).

(Plate XI. fig. 22.)

Emberiza striolata, *Dresser, Birds Eur.* iv. p. 197 (1871); *Oates, Fauna Brit. Ind., Birds*, ii. p. 264 (1890); *id.*, *ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 170 (1890); *Dresser, Man. Pal. Birds*, pt. i. p. 344 (1902).

Fringillaria striolata, *Sharpe, Cat. Birds B. M.* xii. p. 561 (1888); *id.*, *Hand-l.* v. p. 285 (1909).

Emberiza striolata striolata, *Hartert, Vög. Pal. Faun.* pt. ii. p. 191 (1904).

The eggs of the Striolated Bunting are of a somewhat narrow oval shape and very slightly glossy. They are greyish-white or pale bluish-white, very densely freckled and mottled with reddish-brown of various shades, dark on some eggs, pale on others. Though everywhere dense, the markings are particularly so on the broad end, where in some specimens they form a very broad confluent zone. The underlying markings consist of blotches and small

smears of purplish-grey and are very prominent on some examples. Five eggs measure from .75 to .8 in length, and from .53 to .56 in breadth.

3. Ajmere, Rajputana, India, 12th Nov. (*A. O. Hume*). Hume Coll.
2. Ajmere, 16th Nov. (*A. O. H.*). Hume Coll.

Fringillaria saharæ (Levaill.).

Fringillaria saharæ, *Tristram*, *Ibis*, 1859, p. 295; *Sharpe*, *Cat. Birds B. M.* xii. p. 563 (1888); *Nehrke*, *Cat. Eiersamml.* p. 113 (1899); *Whitaker*, *Birds Tunis*. i. p. 228 (1905); *Sharpe*, *Hand-l.* v. p. 285 (1909).

Emberiza saharæ, *Dresser*, *Man. Pal. Birds*, pt. i. p. 345 (1902).

Emberiza striolata sahari, *Hartert*, *Vög. Pal. Faun.* pt. ii. p. 190 (1904).

Eggs of the House-Bunting resemble those of *F. capensis* described above. Six eggs measure from .69 to .75 in length, and from .54 to .57 in breadth.

1. El Alf Beni, Mzab, Algerian Sahara, April (*J. H. Gurney: Tristram Coll.*). Crowley Bequest.
4. South Tunis, 17th May (*P. Spatz*). W. Radcliffe Saunders, Esq. [P.]

Fringillaria impetuani (Smith).

Fringillaria impetuani, *Layard*, *Ibis*, 1868, p. 247; *Gurney*, in *Anderss. Birds Damaral.* p. 189 (1872); *Sharpe*, ed. *Layard, Birds S. Africa*, p. 489 (1875-84); *id.*, *Cat. Birds B. M.* xii. p. 563 (1888); *Stark*, *Fauna S. Afr.*, *Birds*, i. p. 190 (1900); *Shelley*, *Birds Africa*, iii. p. 159 (1902); *Reichenow*, *Vög. Afr.* iii. p. 292 (1904); *Sharpe*, *Hand-l.* v. p. 285 (1909).

Two eggs of the South-African Lark-Bunting in the Collection are much the same as those of the other species of the genus. They are of a broad blunt oval shape and slightly glossy. The ground-colour is white, finely spotted all over with brown and violet-grey. One egg measures .69 by .52.

Layard gives the measurements as .7 by .55, and Stark as .72 by .6.

2. Otjimbingue, Damaraland (*C. J. Andersson: Tristram Coll.*). Crowley Bequest.

Genus **MELOPHUS**, *Swains.***Melophus melanicterus** (*Gmel.*).

(Plate XII. figs. 1 & 4.)

Melophus melanicterus, *Sharpe, Cat. Birds B. M.* xii. p. 568 (1888); *Oates, Fauna Brit. Ind., Birds*, ii. p. 265 (1890); *id.*, ed. *Hume, Nests & Eggs Ind. Birds*, ii. p. 173 (1890); *La Touche, Ibis*, 1900, p. 38; *Sharpe, Hand-l.* v. p. 286 (1909).

Eggs of the Crested Black Bunting are of a broad blunt oval form and have a moderate amount of gloss. The ground-colour is pale greenish-white in some, pinkish-white in others, and they are thickly speckled, streaked and mottled with dull reddish-brown and underlying lavender-grey. The markings are everywhere dense, but especially at the larger end of the egg, where they coalesce so as to form a more or less irregular and ill-defined cap. They measure from .7 to .9 in length, and from .6 to .69 in breadth.

 (1901); *Hartert, Vög. Pal. Faun.* pt. ii. p. 202 (1904).
Passerina nivalis, *Jourd. Eggs Europ. Birds*, p. 118, pl. 14. figs. 17-21
 (1906).

Eggs of the Snow-Bunting are of a pointed oval shape and are moderately glossy. The ground-colour is generally pale bluish-white, but in some specimens it is yellowish-white or cream-colour. The surface-markings, consisting of streaks, spots, and blotches, are reddish- or orange-brown, and there are generally, in addition, some sharply-defined markings of deep chocolate-brown, but these are almost entirely confined to the larger end of the egg. The underlying markings, which are usually large and conspicuous, consist of blotches and clouds of rich lilac-grey and pale purple. The markings are always densest at the large end, where they are often confluent and form a zone or irregular cap.

The eggs measure from .8 to 1.05 in length, and from .6 to .68 in breadth.

Genus **CALCARIUS**, *Bechst.*

Calcarius lapponicus (*Linn.*).

Emberiza lapponica, *Thien. Fortpflanz. ges. Vög.* p. 371, tab. xxxiii. fig. 12. *a-d* (1845-54); *Wheelwright, A Spring & Summer in Lapland*, p. 294 (1871); *Seebohm, Brit. Birds*, ii. p. 131, pl. 15 (1884); *id., Eggs of Brit. Birds*, p. 248, pl. 57. figs. 11 & 12 (1896).

Plectrophanes lapponicus, *Baedeker, Eier Eur. Vög.* tab. 3. fig. 2 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 182, pl. xvi. figs. i & ii (1856); *Dresser, Birds Eur.* iv. p. 253 (1872); *Baird, Brewer, & Ridgw. N. Amer. Birds*, i. p. 515 (1874); *Seebohm & Harvie-Brown, Ibis*, 1876, p. 117; *Seebohm, Ibis*, 1878, p. 341.

Calcarius lapponicus, *Nelson, Report Nat. Hist. Alaska*, p. 183 (1887); *Sharpe, Cat. Birds B. M.* xii. p. 579 (1888); *MacFarlane, Proc. U.S. Nat. Mus.* xiv. p. 441 (1892); *Rey, Eier Vög. Mitteleurop.* p. 295, pl. 38. figs. 22-26 (1900); *Dresser, Man. Pal. Birds*, pt. i. p. 373 (1902); *Newton, Ootheca Wolleyana*, pt. ii. p. 451, pl. xi. figs. 19-24 (1902); *Jour. Eggs Europ. Birds*, p. 117, pl. 14. figs. 22-26 (1906); *Sharpe, Hand-l.* v. p. 287 (1909).

Calcarius lapponicus lapponicus, *Ridgw. Birds North & Middle Amer.* i. p. 155 (1901); *Hartert, Vög. Pal. Faun.* pt. ii. p. 200 (1904).

Eggs of the Lapland Bunting are of a somewhat narrow and pointed oval shape and moderately glossy. The coloration is very variable. In one type the ground-colour varies from pale grey to pale brown, and is almost completely concealed by confluent clouds and smears of yellowish-brown, liver-brown or dull reddish-brown, over which are to be seen spots, short lines and scrawls of deep chocolate-brown. In another type the ground-colour is decidedly greenish, blotched and clouded with lilac-grey and also marked with spots and scrawls of rich purplish-brown, chiefly at the broad end. In a third type, which appears to be rare, the ground-colour is greenish-grey, and the whole shell is thickly speckled with light greenish-brown. Intermediate forms also occur. They measure from .74 to .9 in length, and from .57 to .68 in breadth.

Calcarius ornatus (Towns.).

(Plate XII. fig. 5.)

- Plectrophanes ornatus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 520 (1874); *Coues, Birds N.-West*, p. 122 (1874).
Calcarius ornatus, *Sharpe, Cat. Birds B. M.* xii. p. 586 (1888); *Nehrk. Kat. Eiersamml.* p. 114 (1899); *Ridgw. Birds North & Middle Amer.* i. p. 162 (1901); *Sharpe, Hand-l.* v. p. 287 (1909).

The eggs of the Chestnut-collared Bunting are of an ordinary oval shape and glossy. They are greyish- or pinkish-white, marked with underlying clouds and blotches of lilac- or lavender-grey and with surface spots, scratches, and small blotches, which are bright reddish-brown in some specimens and deep purplish-brown in others. They measure from .69 to .78 in length, and from .56 to .62 in breadth.

1. South Dakota, U.S.A., 18th May. W. Radcliffe Saunders, Esq.
[P.].

Genus **RHYNCHOPHANES**, *Baird*.

Rhynchophanes maccowni (*Lawr.*).

(Plate XII. fig. 3.)

- Plectrophanes maccowni*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 523 (1874).
Rhynchophanes maccowni, *Sharpe, Cat. Birds B. M.* xii. p. 589 (1888);
Nehrke. Kat. Eiersamml. p. 114 (1899); *Ridgw. Birds North & Middle Amer.* i. p. 165 (1901); *Sharpe, Hand-l.* v. p. 288 (1909).

Two eggs of Maccown's Bunting are elliptical in shape, and have a considerable amount of gloss. They are pale creamy- or brownish-buff, very indistinctly mottled with pale lavender and grey, and marked with some specks, scratches, scrawls and fine lines of umber-brown. They measure respectively: .81 by .59; .82 by .59.

2. Traders' Road, 49th Parallel N. Amer. Boundary Comm.
(*G. M. Dawson*).

Genus **CALAMOSPIZA**, *Bonap.*

Calamospiza melanocorys, *Stejn.*

- Calamospiza bicolor*, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 61 (1874); *Coues, Birds N.-West*, p. 163 (1874); *Sharpe, Cat. Birds B. M.* xii. p. 593 (1888); *Nehrke. Kat. Eiersamml.* p. 114 (1899).
Calamospiza melanocorys, *Ridgw. Birds North & Middle Amer.* i. p. 168 (1901); *Sharpe, Hand-l.* v. p. 288 (1909).

The eggs of the American Lark-Bunting are of a very broad oval shape and frequently spheroidal. They are very smooth, glossy, and of a pale blue colour. Many eggs are uniform, others are spotted with light rufous at the broad end. They measure from .79 to .9 in length, and from .62 to .7 in breadth.

4. Near Souris, 49th Parallel, 13th June (*G. M. Dawson*). N. Amer. Boundary Comm.
2. 49th Parallel (*G. M. D.*). N. Amer. Boundary Comm.
4. 49th Parallel (*G. M. D.*: *Henshaw Coll.*). Salvin-Godman Coll.
1. Dane Co., Wisconsin (*Tristram Coll.*). Crowley Bequest.
1. Denver, Colorado, 10th June. W. Radcliffe Saunders, Esq.
[P.].

Genus **SPIZA**, Bonap.**Spiza americana** (Gmel.).

Euspiza americana, Baird, Brewer & Ridgw. *N. Amer. Birds*, ii. p. 65 (1874); Coues, *Birds N.-West*, p. 164 (1874).

Spiza americana, Salv. & Godm. *Biol. Centr.-Amer., Aves*, i. p. 416 (1886); Sharpe, *Cat. Birds B. M.* xii. p. 770 (1888); *Nehrck. Kat. Eiersamml.* p. 118 (1899); *Ridgw. Birds North & Middle Amer.* i. p. 171 (1901); Sharpe, *Hand-l.* v. p. 288 (1909).

Eggs of the Black-throated Bunting appear to be very variable in shape. One specimen in the Collection is almost spherical, another is nearly a perfect ellipse, and a third is a narrow pointed oval. The eggs are glossy and of a plain bluish-green colour. They measure from .79 to .82 in length, and from .6 to .64 in breadth.

Chondestes grammacus, Sharpe, *Hand-l.* v. p. 289 (1909).

The eggs of the Lark-Sparrow are of a broad oval shape and highly glossy. They are white, or very pale creamy-white, marked, almost entirely at the broad end, with spots, blotches, scratches and hair-lines of deep purplish-brown or black and some faint clouds and spots of lavender-grey. They measure from .75 to .82 in length, and from .6 to .66 in breadth.

- | | |
|--|-----------------------------------|

Genus **POECETES**, *Baird*.

Poecetes gramineus (*Gmel.*).

- Fringilla graminea*, *Thien. Fortpflanz. ges. Vög.* p. 389, tab. xxxiv. fig. 8, *a, b* (1845-54).
Poecetes gramineus, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 545 (1874).
Poecetes gramineus, *Coues, Birds N.-West*, p. 129 (1874); *Sharpe. Cat. Birds B. M.* xii. p. 670 (1888); *Nehrke. Kat. Eiersamm.* p. 116 (1899); *Sharpe, Hand-l.* v. p. 289 (1909).
Poecetes gramineus gramineus, *Ridgw. Birds North & Middle Amer.* i. p. 182 (1901).

Eggs of the Vesper Sparrow are of a pointed oval form and almost devoid of gloss. They are greyish-white, mottled with underlying lilac-grey or pinkish-brown, and sparingly marked with some surface-spots, lines, scratches, and small blotches of reddish-brown or deep purplish-brown. The markings are usually rather evenly distributed over the surface of the egg, but in some instances they form a confluent zone round the broad end. Specimens measure from .77 to .87 in length, and from .56 to .62 in breadth.

***Ammodromus caudacutus* (Gmel.).**

(Plate XII. fig. 16.)

Ammodromus caudacutus, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 557 (1874); *Sharpe, Cat. Birds B. M.* xii. p. 685 (1888) [part.]; *Nehrke. Kat. Eiersamml.* p. 116 (1899); *Sharpe, Hand-l.* v. p. 294 (1909).

Ammodromus caudacutus caudacutus, *Ridgw. Birds North & Middle Amer.* i. p. 220 (1901).

Seven eggs of the Sharp-tailed Sparrow are of a blunt oval form

and moderately glossy. They are greyish- or greenish-white, more or less densely mottled and freckled with various shades of reddish-brown and some underlying lavender-grey. They measure from .72 to .79 in length and from .53 to .6 in breadth.

1. North America (*Smiths. Inst.*). Salvin-Godman Coll.
3. North America (*Henshaw Coll.*). Salvin-Godman Coll.
3. Salt Marshes, New Jersey (*Tristram Coll.*). Crowley Bequest.

Genus **MYIOSPIZA**, *Ridgw.*

Myiospiza peruana (*Bonap.*).

- Coturniculus peruanus*, *Scl. & Huds. Argent. Orn.* i. p. 60 (1888); *Holland, Ibis*, 1893, p. 484.
Ammodromus peruans, *Sharpe, Cat. Birds B. M.* xii. p. 693 (1888).
Myiospiza peruana, *Sharpe, Hand-l.* v. p. 295 (1909).

The eggs of the Yellow-shouldered Sparrow are of a rather narrow pointed oval shape and exhibit a considerable amount of gloss. They are plain white. Four examples measure respectively: .81 by .58; .82 by .55; .85 by .56; .77 by .55.

4. Argentina, Oct. A. H. Holland, Esq. [C.].

Genus **PLAGIOSPIZA**, *Ridgw.*

Plagiospiza superciliosa (*Swains.*).

(Plate XII. figs. 21, 22.)

- Hæmophila superciliosa*, *Sharpe, Cat. Birds B. M.* xii. p. 722 (1888).
Plagiospiza superciliosa, *Ridgw. Birds North & Middle Amer.* i. p. 229 (1901); *Sharpe, Hand-l.* v. p. 295 (1909).

Two eggs of the Striped Sparrow are of a rather broad, somewhat pointed oval form and distinctly glossy. The ground-colour is white, with dots, spots, and small blotches of light red, dark reddish-brown and lilac-grey, scattered over the entire shell, but most numerous about the larger end. They measure respectively .95 by .68 and .92 by .67.

2. Durango, Mexico, 30th April. Crowley Bequest.

Genus **HÆMOPHILA**, *Swains.*

Hæmophila cassini (*Woodhouse*).

- Peuceea cassini*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 42 (1874); *Merrill, P. U. S. Nat. Mus.* i. p. 128 (1878); *Sharpe, Cat. Birds B. M.* xii. p. 712 (1888); *Salvin & Godman, Biol. Centr.-Amer., Aves*, i. p. 391 (1886).
Aimophila cassini, *Ridgw. Birds North & Middle Amer.* i. p. 253 (1901).
Hæmophila cassini, *Sharpe, Hand-l.* v. p. 298 (1909).

The eggs of Cassin's Sparrow are of a regular oval form, moderately glossy, and plain white. They measure from .68 to .79 in length, and from .54 to .6 in breadth.

Amphispiza deserticola, *Ridgw.*

- Poospiza bilineata, *Henshaw, Rep. Wheeler's Surv.* v. p. 274 (1875).
- Amphispiza bilineata deserticola, *Ridgw. Birds North & Middle Amer.* i. p. 265 (1901).
- Amphispiza deserticola, *Sharpe, Hand-l.* v. p. 300 (1909).

Three eggs of the Desert Sparrow are of a rather broad oval form, distinctly glossy, and plain bluish-white. They measure respectively: .7 by .58; .71 by .57; .71 by .57.

- | | |
|--------------------------------------|---------------------|
| 3. Arizona (<i>H. W. Henshaw</i>). | Salvin-Godman Cell. |
|--------------------------------------|---------------------|

Amphispiza belli (*Cassin*).

(Plate XII. fig. 17.)

- Amphispiza belli, *Sharpe, Cat. Birds B. M.* xii. p. 629 (1888); *id. Hand-l.* v. p. 300 (1909).
- Amphispiza belli belli, *Ridgw. Birds North & Middle Amer.* i. p. 267 (1901).

Four eggs of Bell's Sparrow are of a regular oval shape and

slightly glossy. The ground-colour is pale greenish-white, finely spotted all over with reddish-brown and with underlying small blotches and spots of violet-grey, the markings being most numerous round the larger end. They measure from $\cdot 71$ to $\cdot 72$ in length, and from $\cdot 53$ to $\cdot 55$ in breadth.

4. San Diego, California, 12th April W. Radcliffe Saunders, Esq.
(O. W. Knight). [P.].

Amphispiza nevadensis, Ridgw.

(Plate XII. fig. 20.)

Poospiza belli, var. *nevadensis*, Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 594 (1874).

Amphispiza nevadensis, Sharpe, *Cat. Birds B. M.* xii. p. 630 (1888); *id. Hand-l.* v. p. 301 (1909).

Amphispiza belli nevadensis, Henshaw, *Rep. Wheeler's Surv.* 1879, p. 296; *Ridgw. Birds North & Middle Amer.* i. p. 270 (1901).

Four eggs of the Sage-Sparrow are of a rather lengthened oval form and moderately glossy. They are very pale green, speckled and blotched with pale reddish-brown and purplish-grey. The markings are most frequent at the broad end, where they are more or less confluent and form a wide zone. In addition, the eggs have a few blotches and scrawls of very dark reddish-brown, almost black, scattered over their surface. They measure respectively: $\cdot 8$ by $\cdot 57$; $\cdot 75$ by $\cdot 57$; $\cdot 82$ by $\cdot 57$; $\cdot 79$ by $\cdot 57$.

4. Reno, Nevada, 25th May (H. W. Salvin-Godman Coll
Henshaw).

Genus *POOSPIZA*, Cab.

Poospiza melanoleuca (D'Orb. & Lafr.).

(Plate XII. fig. 11.)

Poospiza melanoleuca, Sharpe, *Cat. Birds B. M.* xii. p. 638 (1888); *Nehr. Kat. Eiersamml.* p. 115 (1899); *Sharpe, Hand-l.* v. p. 302 (1909).

Two eggs of the White-and-Grey Warbling-Finch are of a rather pointed oval shape and somewhat glossy. They are white, sparingly spotted, chiefly round the larger end, where the markings form an irregular zone, with brownish-black and lilac-grey. They measure respectively $\cdot 75$ by $\cdot 53$ and $\cdot 73$ by $\cdot 55$.

2. Argentina. Crowley Bequest.

Genus **JUNCO**, *Wagler*.**Junco hyemalis** (*Linn.*).

(Plate XII. fig. 13.)

- Junco hyemalis*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 580 (1874); *Coues, Birds N.-West*, p. 141 (1874); *Sharpe, Hand-l. v.* p. 303 (1909).
Junco hiemalis, *Sharpe, Cat. Birds B. M.* xii. p. 647 (1888); *Nehrk. Kat. Eiersamml.* p. 115 (1899).
Junco hyemalis hyemalis, *Ridgw. Birds North & Middle Amer.* i. p. 278 (1901).

Eggs of the Snow-bird or Slate-coloured Junco are of a regular oval shape and have a fair amount of gloss. They are creamy-white, mottled and blotched with pale reddish-brown and lilac-grey. The markings are often confluent at the broad end of the egg and form a cap. One example in the Collection is mottled entirely with faint lavender-grey. They measure from .7 to .8 in length, and from .56 to .6 in breadth.

Junco oregonus (*Townsend*).

- Junco oregonus*, *Sharpe, Cat. Birds B. M.* xii. p. 650 (1888); *Nehrk. Kat. Eiersamml.* p. 115 (1899); *Sharpe, Hand-l. v.* p. 303 (1909).
Junco oregonus oregonus, *Ridgw. Birds North & Middle Amer.* i. p. 283 (1901).

Five eggs received in the Crowley Bequest and believed to be those of the Oregon Junco, vary greatly both in size and markings. Two resemble those of *J. hyemalis*, being white, spotted and blotched with light red and lilac, chiefly about the broad end. They measure respectively .74 by .57 and .76 by .6. A third egg is similar in colour, but much smaller, .71 by .53. Two eggs from Fort Resolution are pale greenish-white, thickly and evenly spotted all over with brown and lilac-grey. They measure respectively .8 by .59 and .75 by .6.

No description of the eggs of this species appears to have been published. It seems doubtful if the eggs from Fort Resolution

have been correctly identified, but they appear to have been carefully collected.

| 2. Massachusetts (<i>T. M. Brewer</i> ;
<i>Tristram Coll.</i>). | Crowley Bequest. |
|--|------------------|

Spizella ochracea, Brewster.

(Plate XII. fig. 12.)

Spizella monticola, Ross, *Nat. Hist. Rev.* 1862, p. 282; *id.*, *Canad. Nat.* vii. p. 147 (1862); *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 3 (1874) [part.]; *MacFarlane, Proc. U. S. Nat. Mus.* xiv. p. 443 (1892).

Spizella monticola ochracea, Nelson, *Report Nat. Hist. Alaska*, p. 190 (1887); *Ridgw. Birds North & Middle Amer.* i. p. 309 (1901).

Spizella ochracea, Sharpe, *Cat. Birds B. M.* xii. p. 659 (1888); *id. Hand-l.* v. p. 306 (1909).

Some eggs of the West-American Tree-Sparrow resemble those of *S. monticola*, but the majority of those in the Collection are more brightly coloured and in some clutches the markings are much larger. The ground-colour is pale green, spotted and mottled with bright reddish-brown, the markings being often dense and confluent at the broad end, where they sometimes form an imperfect cap. Underlying the surface markings are many smears and clouds of purplish-grey. Eggs of this species, if all are correctly identified, vary greatly in size. The larger ones closely resemble the eggs of *Zonotrichia leucophrys* and its allies and should possibly be referred to one of those species. They measure from .7 to .86 in length, and from .55 to .63 in breadth.

Spizella socialis (Wilson).

Fringilla socialis, Thien, *Fortpflanz. ges. Vög.* p. 392, tab. xxxv. fig. 17, a, b (1845-54).

Spizella socialis, Ross, *Nat. Hist. Rev.* 1862, p. 282; *id.*, *Canad. Nat.* vii. p. 147 (1862); *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 3 (1874) [part.]; *Sharpe, Cat. Birds, B. M.* xii. p. 660 (1888) [part.]; *Nehrke, Kat. Eiersamml.* p. 115 (1899); *Sharpe, Hand-l.* v. p. 306 (1909).

Spizella socialis socialis, *Ridgw. Birds North & Middle Amer.* i. p. 311 (1901).

The eggs of the Chipping Sparrow are of a pointed oval shape and moderately glossy. They are greenish-blue, spotted and blotched, almost entirely at the broad end, with dark purplish-brown or black, and lilac-grey or pinkish-brown. The markings are sparse and small in size and rarely extend to the smaller half of the egg. Specimens measure from .6 to .72 in length, and from .5 to .55 in breadth.

Genus ZONOTRICHIA, Swains.

Zonotrichia leucophrys (Forster).

Fringilla leucophrys, Thien. *Fortpflanz. ges. Vög.* p. 395, tab. xxxiv. fig. 2, a-c (1845-54).

Zonotrichia leucophrys, Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 566 (1874); Sharpe, *Cat. Birds B. M.* xii. p. 603 (1888) [part.]; Sharpe, *Hand-l.* v. p. 308 (1909).

Zonotrichia leucophrys leucophrys, Ridgw. *Birds North & Middle Amer.* i. p. 336 (1901).

Eggs of the White-crowned Sparrow are of a broad oval shape and moderately glossy. They are pale greenish-white, mottled with brick-red and some underlying grey spots. The density of the markings varies considerably, some eggs having the ground-colour almost entirely concealed, whereas in others it is plainly visible,

especially at the smaller end of the egg. They measure from .81 to .88 in length, and from .6 to .66 in breadth.

Zonotrichia gambeli (Nuttall).

Zonotrichia gambelii, Ross, *Nat. Hist. Review*, 1862, p. 281; *id. Canad. Nat.* vii. p. 147 (1862); Sharpe, *Cat. Birds B. M.* xii. p. 606 (1888) [part.]; *id. Hand-l.* v. p. 308 (1909).

Zonotrichia leucophrys, var. *gambeli*, Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 569 (1874).

Brachyspiza capensis peruviana, *Ridgw. Birds North & Middle Amer.* i. p. 347 (1901).

The eggs of the Chingolo Song-Sparrow resemble those laid by the species of the genus *Zonotrichia*. The ground-colour varies from bluish- or greenish-white to a pale blue. The markings are dull brick-red and vary considerably. Some eggs are only very faintly speckled, while others are thickly covered with spots and blotches which cover more than half the shell, and between these two types there are numerous intermediate forms. Many specimens are fairly evenly marked all over, others have the markings more thickly disposed at the broad end, where they form a zone or cap. Many

eggs exhibit underlying markings of lilac-grey. Specimens measure from .75 to .91 in length, and from .6 to .65 in breadth.

Genus **MELOSPIZA**, Baird.

Melospiza melodia (Wilson).

Fringilla melodia, Thien. *Fortpflanz. ges. Vög.* p. 395, tab. xxxiv. fig. 4, a, b (1845-54).

Melospiza melodia, Baird, *Brewer & Ridgw. N. Amer. Birds*, ii. p. 19 (1874); Sharpe, *Hand-l.* v. p. 310 (1909).

Melospiza fasciata, Sharpe, *Cat. Birds B. M.* xii. p. 701 (1888) [part.]; Thompson, *P. U.S. Nat. Mus.* xiii. p. 604 (1891); *Nehrk. Kat. Eiersamml.* p. 117 (1899).

Melospiza cinerea melodia, Ridgw. *Birds North & Middle Amer.* i. p. 354 (1901).

The eggs of the Song-Sparrow are of a broad oval shape and moderately glossy. The ground-colour is greenish-white, or very pale greenish-blue, spotted and blotched with rather bright brick-red or purplish-red and lilac-grey. The markings are generally confluent at the broad end, but on the remainder of the shell they are distinct and well-defined. Specimens measure from .7 to .85 in length, and from .59 to .65 in breadth.

Melospiza cinerea montana, *Ridgw. Birds North & Middle Amer.* i. p. 358 (1901).

Melospiza montana, *Sharpe, Hand-l.* v. p. 310 (1909).

Two eggs of the Mountain Song-Sparrow are similar to those of *M. melodia*. They measure respectively .89 by .62 and .82 by .60.

2. Colorado, 13th June.

W. Radcliffe Saunders, Esq.
[P.].

Melospiza fallax (*Baird*).

Melospiza melodia, var. *fallax*, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 22 (1874).

Melospiza fallax, *Sharpe, Cat. Birds B. M.* xii. p. 703 (1888) [part.]; *Nehrk. Kat. Eiersamml.* p. 117 (1899); *Sharpe, Hand-l.* v. p. 311 (1909).

Melospiza cinerea fallax, *Ridgw. Birds North & Middle Amer.* i. p. 362 (1901).

Eggs of the Desert Song-Sparrow in the Collection are of three types. Two of these correspond well with the two types of the eggs of *M. georgiana* described below. In the third type the egg is greyish-white, very densely freckled all over with orange-brown. Specimens measure from .7 to .8 in length, and from .58 to .6 in breadth.

Melospiza georgiana, Sharpe, *Cat. Birds B. M.* xii. p. 697 (1888); *Nehrk. Kat. Eiersamml.* p. 116 (1899); Ridgw. *Birds North & Middle Amer.* i. p. 382 (1901); Sharpe, *Hand-l.* v. p. 313 (1909).

Eggs of the Swamp-Sparrow vary from a broad oval to a narrow

oval shape and are slightly glossy. Some are greenish-white, mottled and smeared with pale brown and marked with a few spots of a darker brown. Others are greyish-white, or greenish-white, smeared and blotched with dull brick-red and pale underlying lavender-grey or very finely marked all over with the same colour. They measure from .7 to .83 in length, and from .55 to .6 in breadth.

Genus PASSERELLA, *Swains.*

Passerella iliaca (*Merrem.*)

Fringilla iliaca, *Thien. Fortpflanz. ges. Vög.* p. 394, tab. xxxiv. fig. 3, a-c (1845-54).

Passerella iliaca, *Ross, Nat. Hist. Rev.* 1862, p. 282; *id. Canad. Nat.* vii. p. 147 (1862); *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 50 (1874); *Coues, Birds N.-West*, p. 160 (1874); *Sharpe, Cat. Birds B. M.* xii. p. 716 (1888); *MacFarlane, P. U. S. Nat. Mus.* xiv. p. 443 (1891); *Nehrk. Kat. Eiersamml.* p. 117 (1899); *Sharpe, Hand-l.* v. p. 314 (1909).

Passerella iliaca iliaca, *Ridgw. Birds North & Middle Amer.* i. p. 386 (1901).

The eggs of the Fox-coloured Sparrow vary from a blunt oval to a perfectly elliptical shape and are moderately glossy. They are very pale green, densely mottled, blotched and smeared with bright brick-red. Here and there, traces of underlying grey may be detected. The surface-markings are confluent over the broad end and frequently over the whole surface of the egg. Specimens measure from .9 to .96 in length, and from .62 to .7 in breadth.

- Passerina ciris*, *Sharpe, Hand-l.* v. p. 315 (1909).

Eggs of the Nonpareil or Painted Bunting vary from a blunt to a rather long oval form, and are moderately glossy. They are

white, densely speckled with brick-red or purplish-red and lavender-grey, the markings being sometimes evenly distributed over the entire shell, but more often concentrated towards the larger end, where they form an irregular cap or zone. They measure from .7 to .84 in length, and from .55 to .58 in breadth.

Genus **OREOSPIZA**, *Ridgw.*

Oreospiza chlorura (*Townsend*).

- Pipilo chlorurus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 131 (1874); *Coues, Birds N.-West*, p. 177 (1874); *Henshaw, Rep. Orn. Wheeler's Surv.* v. *Zool.* p. 307 (1875); *Bendire, P. Bost. Soc. N. H.* 1877. p. 121.
- Atlapetes chlorurus*, *Sharpe, Cat. Birds B. M.* xii. p. 738 (1888); *Nehr. Kat. Eiersamml.* p. 118 (1899).
- Oreospiza chlorura*, *Ridgw. Birds North & Middle Amer.* i. p. 400 (1901); *Sharpe, Hand-l.* v. p. 316 (1909).

Four eggs of the Green-tailed Towhee are of a blunt oval form, approaching the elliptical, and slightly glossy. They are white, very minutely mottled all over with light reddish-brown, the markings being very uniform over the whole surface of the egg. At the broad end there are occasionally a few very minute darker specks. Four examples measure respectively: .87 by .68; .9 by .68; .87 by .67; .8 by .66.

Genus **PIPILO**, *Vieill.*

Pipilo megalonyx, *Baird*.

- Pipilo maculatus*, var. *megalonyx*, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 113 (1874).
- Pipilo megalonyx*, *Sharpe, Cat. Birds B. M.* xii. p. 748 (1888); *Nehr. Kat. Eiersamml.* p. 118 (1899); *Sharpe, Hand-l.* v. p. 318 (1909).
- Pipilo maculatus megalonyx*, *Ridgw. Birds North & Middle Amer.* i. p. 415 (1901).

Four eggs of the Spurred Towhee are of a regular oval shape and

slightly glossy. The ground-colour is white, minutely spotted over the entire surface with brick-red or maroon and lilac-grey, the markings being rather more numerous towards the larger end and sometimes forming an irregular zone or cap. They measure from .9 to 1.1 in length, and from .69 to .74 in breadth.

1. California (*T. M. Brewer: Tristram Crowley Bequest. Coll.*).
3. Waterville, California, 10th May. W. Radcliffe Saunders, Esq. [P.].

Pipilo oregonus, Bell.

Pipilo maculatus, var. *oregonus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 116 (1874).

Pipilo oregonus, *Sharpe, Cat. Birds B. M.* xii. p. 749 (1888); *Nehrk. Kat. Eiersamml.* p. 118 (1899); *Sharpe, Hand-l.* v. p. 318 (1909).

Pipilo maculatus, var. *oregonus*, *Ridgw. Birds North & Middle Amer.* i. p. 420 (1901).

An egg of the Oregon Towhee is similar to that of *P. megalonyx*. It measures .92 by .7.

1. Portland, Oregon, 2nd June. W. Radcliffe Saunders, Esq. [P.].

Pipilo erythrophthalmus (Linn.).

Fringilla erythrophthalma, *Thien. Fortpflanz. ges. Vög.* p. 388, tab. xxxiv. fig. 1, a, b (1845-54).

Pipilo erythrophthalmus, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 109 (1874); *Sharpe, Cat. Birds B. M.* xii. p. 744 (1888); *Nehrk. Kat. Eiersamml.* p. 118 (1899); *Sharpe, Hand-l.* v. p. 319 (1909).

Pipilo erythrophthalmus erythrophthalmus, *Ridgw. Birds North & Middle Amer.* i. p. 423 (1901).

Eggs of the Towhee or Chewink are of a blunt oval form with the smaller end much rounded, and they are moderately glossy. The ground-colour is white, densely speckled and mottled, especially at the broad end, where a cap is often formed, with brick-red or maroon and lavender-grey. They measure from .8 to 1.0 in length, and from .65 to .73 in breadth.

Pipilo alleni, Coues.

Pipilo alleni, *Sharpe, Cat. Birds B. M.* xii. p. 746 (1888); *Nehrk. Kat. Eiersamml.* p. 118 (1899); *Sharpe, Hand-l. v.* p. 319 (1909).

Pipilo erythrophthalmus alleni, *Ridgw. Birds North & Middle Amer.* i. p. 426 (1901).

An egg of the Florida Towhee is similar to those of *P. erythrophthalmus*. It measures .9 by .73.

1. Jacksonville, Florida, 2nd June. W. Radcliffe Saunders, Esq.
[P.].

Pipilo fuscus, Swains.

Pipilo fuscus, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 409 (1886); *Sharpe, Cat. Birds B. M.* xii. p. 752 (1888); *Nehrk. Kat. Eiersamml.* p. 118 (1899); *Sharpe, Hand-l. v.* p. 319 (1909).

Pipilo fuscus fuscus, *Ridgw. Birds North & Middle Amer.* i. p. 430 (1901).

An egg of the Mexican Towhee in the Collection is of a blunt oval, or nearly elliptical, shape and almost devoid of gloss. It is pale blue, sparingly spotted, scratched and lined with black, and faintly marked with underlying slaty-grey. The scratches and lines on the egg of this bird resemble those usually seen on the eggs of the Buntings, and are chiefly confined to the broad end. It measures 1.0 by .75.

1. Mexico (*Smiths. Inst.*). Salvin-Godman Coll.

Pipilo mesoleucus, Baird.

Pipilo fuscus, var. *mesoleucus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 125 (1874).

Pipilo mesoleucus, *Brewster, Bull. Nutt. Orn. C.* vii. p. 197 (1882); *Sharpe, Cat. Birds B. M.* xii. p. 754 (1888); *Nehrk. Kat. Eiersamml.* p. 118 (1899); *Bendire, Auk*, vii. p. 22 (1890); *Sharpe, Hand-l. v.* p. 320 (1909).

Pipilo fuscus mesoleucus, *Ridgw. Birds North & Middle Amer.* i. p. 432 (1901).

The eggs of the Cañon Towhee are of much the same type as those of *P. fuscus* and *P. crissalis*. In one clutch, the eggs are white, rather thickly blotched and spotted, especially at the broad end where the markings form a wreath or zone, with rich purplish-brown and lavender or lilac. In a second clutch, the eggs are very pale blue and almost unmarked, except at the broad end, where a number of delicate markings form a well-defined wreath. The markings consist of spots, short twisted lines and streaks, and are of a rich chocolate-brown and lilac-colour. Four specimens measure respectively: .87 by .67; .91 by .68; .94 by .69; 1.02 by .71.

2. Tucson, Arizona (*Henshaw Coll.*). Salvin-Godman Coll.
2. Tucson (*Henshaw Coll.*). Salvin-Godman Coll.

Pipilo albigula, Baird.

- Pipilo fuscus*, var. *albigula*, Baird, *Brewer & Ridgw. N. Amer. Birds*, ii. p. 127 (1874).
Pipilo albigula, Sharpe, *Cat. Birds B. M.* xii. p. 755 (1888); *Ridgw. Birds North & Middle Amer.* i. p. 433 (1901); *Sharpe, Hand-l.* v. p. 320 (1909).

Two eggs of the Saint Lucas Towhee closely resemble the eggs of the second clutch of *P. mesoleucus* described above and require no separate description. They measure respectively: .88 by .67; .88 by .66.

2. Cape St. Lucas, California, 18th Aug. (*J. Xantus: Smiths. Inst.*).
 Salvin-Godman Coll.

Pipilo crissalis (Vig.).

- Pipilo fuscus*, var. *crissalis*, Baird, *Brewer & Ridgw. N. Amer. Birds*, ii. p. 122 (1874).
Pipilo crissalis, Sharpe, *Cat. Birds B. M.* xii. p. 753 (1888); *id. Hand-l.* v. p. 320 (1909).
Pipilo crissalis crissalis, *Ridgw. Birds North & Middle Amer.* i. p. 434 (1901).

Eggs of the Californian Towhee closely resemble the egg of *P. fuscus* described above, but are rather smaller. They measure from .94 to 1.0 in length, and from .68 to .73 in breadth.

2. California (*R. Ridgway: Tristram Coll.*).
 1. California, 12th April.

Genus **MELOZONE, Reichenb.**

Melozone biarcuatum (Prévost).

- Pyrgisoma biarcuatum*, *Scl. & Salv. Ibis*, 1859, p. 18, pl. v. fig. 2; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 401 (1886); *Sharpe, Cat. Birds B. M.* xii. p. 733 (1888); *Nehrk. Kat. Eiersamml.* p. 117 (1899).
Melozone biarcuatum, *Ridgw. Birds North & Middle Amer.* i. p. 443 (1901); *Sharpe, Hand-l.* v. p. 321 (1909).

The eggs of Prévost's Ground-Sparrow are of a regular oval shape and moderately glossy. They are white or creamy-white, marked with specks, spots, and small blotches of rather bright brick-red and lilac. The markings are very dense at the broad end, where

they form a large irregular cap, and somewhat sparse elsewhere. They measure from .86 to .97 in length, and from .63 to .7 in breadth.

Genus **EMBERNAGRA**, *Less.*

Embernagra platensis (*Gmel.*).

Embernagra platensis, *Scl. & Huds. Argent. Orn.* i. p. 62 (1888); *Sharpe, Cat. Birds B. M.* xii. p. 758 (1888); *Dalgleish, Proc. R. Phys. Soc. Edinb.* x. p. 77 (1888-90); *Holland, Ibis*, 1892, p. 197; 1895, p. 215; *Nehrke, Kat. Eiersamml.* p. 118 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 215 (1900); *Sharpe, Hand-l.* v. p. 323 (1909).

Eggs of the Red-billed Ground-Finch are of a regular oval form and very glossy. They are white or pinkish-white, marked, but almost entirely at the broad end, in various ways. Some eggs are spotted with rich chocolate-brown and underlying lavender; others are smeared with pale brownish-pink and lilac, and blotched with very rich chestnut-brown; others again are very beautifully marked with an intricate tracery of lines, intermingled with spots and streaks, of extremely rich purplish- or chocolate-brown. With the exception of the broad end, the surface of the egg is unmarked, or very sparingly speckled with rufous. Eggs measure from .9 to 1.02 in length, and from .68 to .75 in breadth.

Genus **EMBERIZOIDES**, *Temm.*

Emberizoides macrurus (*Gmel.*).

Emberizoides macrurus, *Scl. & Salv. P. Z. S.* 1879, p. 507; *Sharpe, Cat. Birds B. M.* xii. p. 768 (1888); *id. Hand-l.* v. p. 324 (1909).

The eggs of the Long-tailed Finch are of a pointed oval shape, rather glossy, and white, very sparingly and delicately speckled with black. A few of the markings are larger than the others, but none are larger than the head of an ordinary pin. In two specimens the specks are distributed over the entire shell; in another they are chiefly collected about the larger end, where there are also a few hair-lines. Three examples measure respectively: .92 by .65; .9 by .68; .91 by .66.

2. Medellin, Antioquia, U.S. Colombia (<i>T. K. Salmon</i>).	Salvin-Godman Coll.
1. Medellin (<i>T. K. S.</i>).	Salvin-Godman Coll.

Genus **PSEUDOCHLORIS**, *Sharpe*.**Pseudochloris uropygialis** (*D'Orb. & Laf.*).

Pseudochloris uropygialis, *Sharpe, Cat. Birds B. M.* xii. p. 776 (1888); *Nehrke, Kat. Eiersamml.* p. 119 (1899); *Sharpe, Hand-l.* v. p. 325 (1909).

An egg of the Grey-backed Seed-Finch is of a regular, rather pointed, oval form, and very slightly glossy. The ground-colour is pale bluish-white speckled all over with brown and grey, the markings being rather more numerous round the larger end. It measures .83 by .6.

1. Peru (*Nehrke Coll.*).

Crowley Bequest.

Pseudochloris aureiventris (*Philippi & Landb.*).

Pseudochloris aureiventris, *Sharpe, Cat. Birds B. M.* xii. p. 777 (1888); *James, New List Chilean Birds*, p. 2 (1892); *Sharpe, Hand-l.* v. p. 325 (1909).

The eggs of the Yellow-bellied Seed-Finch are of a regular oval shape and slightly glossy. They are white, sparingly speckled on the broader half of the shell with chestnut-brown and lilac. Six examples measure from .7 to .75 in length, and from .54 to .58 in breadth.

These eggs are of a totally different type to that referred to *P. uropygialis*.

3. Central Chile (*Landbeck*).

Berkeley James Coll.

3. Central Chile (*Landbeck*).

Berkeley James Coll.

Genus **PHRYGILUS**, *Cab.***Phrygilus gayi** (*Eydoux & Gervais*).

Phrygilus gayi, *Sharpe, Cat. Birds B. M.* xii. p. 781 (1888); *Gosse, in Fitzgerald's Highest Andes, App. C*, p. 347 (1899); *Sharpe, Hand-l.* v. p. 326 (1909).

Three eggs of Gay's Finch resemble those of *P. melanoderus*. They are greenish-blue, spotted and speckled with dull chestnut-brown and lilac-grey. They measure respectively: .82 by .63 .8 by .63; .8 by .65.

3. Puente del Inca, Andes
(*P. H. Gosse*).

E. A. Fitzgerald, Esq. [P.].

Phrygilus melanoderus (Quoy & Gaimard).

(Plate XIII. figs. 2 & 3.)

Melanodera typica, Gould, *P. Z. S.* 1859, p. 95.

Phrygilus melanoderus, Abbott, *Ibis*, 1861, p. 153; *Scl. & Salv. Zool. Voy. 'Challenger,'* ii. pt. viii. p. 100 (1880); *Scl. t. c.* p. 150; Sharpe, *Cat. Birds B. M.* xii. p. 786 (1888); *id. Hand-l. v.* p. 327 (1909); *Nehrck. Kat. Eiersamml.* p. 321 (1910).

Eggs of the Falkland Islands' Finch are of a narrow oval form and somewhat glossy. They are light greenish-blue or dull greenish, mottled and speckled with reddish-brown and lilac-grey; the markings, which are fairly numerous in some specimens and more heavily marked in others, are generally densest on the broad end. Specimens measure from .85 to 1 in length, and from .62 to .66 in breadth.

Haplospiza unicolor, *Cab.*

Haplospiza unicolor, Sharpe, *Cat. Birds B. M.* xii. p. 626 (1888); *id. Hand-l. v.* p. 329 (1909); *Nehrck. Kat. Eiersamml.* p. 321 (1910).

An egg believed to be that of Lichtenstein's Finch is of a pyriform shape, somewhat glossy and pure white. It measures .75 by .58.

- | | |
|------------|------------------|
| 1. Brazil. | Crowley Bequest. |
|------------|------------------|

Genus **DIUCA**, *Reichenb.***Diuca diuca** (*Molina*).

(Plate XIII. fig. 9.)

Diuca grisea, *Scl. & Huds. Argent. Orn.* i. p. 55 (1888); *James, New List Chilean Birds*, p. 2 (1892); *Lane, Ibis*, 1897, p. 18.

Diuca diuca, *Sharpe, Cat. Birds B. M.* xii. p. 800 (1888); *Nehrke. Kat. Eiersamml.* p. 119 (1899), p. 321 (1910); *Sharpe, Hand-l.* v. p. 330 (1909).

The eggs of the Diuca Finch are of an elongated oval shape and have a considerable amount of gloss. They are pale green, spotted, mottled and streaked with dark brown and lavender-grey. Some specimens are so thickly marked that but little of the ground-colour is visible; others are distinctly spotted and blotched, and others again present a streaky appearance. They measure from .89 to 1.02 in length, and from .66 to .7 in breadth.

Arremon spectabilis, *Sclater*.

Arremon spectabilis, *Scl. Cat. Birds B. M.* xi. p. 275 (1886); *Sharpe, Hand-l.* v. p. 333 (1909); *Nehrck. Kat. Eiersamml.* p. 322 (1910).

The eggs of Sclater's Arremon are of a narrow oval shape, with

a slight gloss. They are white, very sparingly speckled with black, chiefly at the broad end. Two examples measure respectively: .93 by .62; and .95 by .62.

2. Nanegal, Ecuador (*L. Fraser*). Salvin-Godman Coll.

Arremon aurantirostris, *Lafr.*

Arremon aurantirostris, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 324 (1883); *Scl. Cat. Birds B. M.* xi. p. 275 (1886); *Richmond, Pr. U. S. Nat. Mus.* xvi. p. 490 (1893); *Ridgw. Birds North & Middle Amer.* i. p. 455 (1901); *Sharpe, Hand-l. v.* p. 334 (1909).

An egg believed to be that of the Orange-billed Arremon is of a rather broad oval shape; the ground-colour is greenish-white, marked all over the shell, especially towards the broader end, with small spots and dots of rust-colour and purplish-red. It measures .95 by .68.

Genus **LYSURUS**, *Ridgw.*

Lysurus castaneiceps (*Scater*).

(Plate XIII. fig. 7.)

Buarremon castaneiceps, *Scl. & Salv. P. Z. S.* 1879, p. 505; *Scl. Cat. Birds B. M.* xi. p. 261 (1886).
Lysurus castaneiceps, *Sharpe, Hand-l. v.* p. 335 (1909).

The eggs of the Chestnut-capped Sparrow are of a blunt oval shape and slightly glossy. They are white, thickly sprinkled with specks and small blotches of chestnut and pale lavender, especially at the broad end, where the markings form an ill-defined cap. Two examples measure respectively: 1.03 by .72, and .96 by .72.

2. Frontino, Antioquia, U.S. Co- Salvin-Godman Coll.
lombia (*T. K. Salmon*).

Genus **ATLAPETES**, *Wagler*.

Atlapetes pileatus, *Wagler*.

Atlapetes pileatus, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 405 (1886); *Sharpe, Cat. Birds B. M.* xii. p. 740 (1888); *id. Hand-l. v.* p. 335 (1909).
Atlapetes pileatus pileatus, *Ridgw. Birds North & Middle Amer.* i. p. 460 (1901).

An egg believed to be that of the Rufous-capped Sparrow is of a

rather long oval form and slightly glossy. It is white, finely spotted with maroon, pale pinkish-red, and grey; the markings are very numerous round the larger end, where they form a well-marked zone, and fairly numerous over the rest of the shell. It measures .96 by .68.

Cæreba mexicana (Scl.).

Certhiola mexicana, *Scl. & Salv. P. Z. S.* 1879, p. 497; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 250 (1883); *Scl. Cat. Birds B. M.* xi. p. 38 (1886); *Nehr. Kat. Eiersamml.* p. 94 (1899).
Cæreba mexicana, *Sharpe, Hand-l.* v. p. 342 (1909).

An egg of the Mexican Sugar-bird is a regular oval in form and devoid of gloss. It is dull white, thickly speckled and mottled with pale reddish-brown and lavender, the markings being densest at the broad end, round which they form a wide zone. It measures .64 by .5.

1. Medellin, Antioquia, U.S. Co- Salvin-Godman Coll.
 lombia (*T. K. Salmon*).

Cæreba flaveola (Linn.).

(Plate XIII. fig. 1).

Certhiola flaveola, *Gosse, Birds Jamaica*, p. 84 (1847); *Scl. Cat. Birds B. M.* xi. p. 43 (1886); *Nehr. Kat. Eiersamml.* p. 94 (1899).
Cæreba flaveola, *Ridgw. Birds North & Middle Amer.* ii. p. 414 (1902);
Sharpe, Hand-l. v. p. 343 (1909); *Nehr. Kat. Eiersamml.* p. 323 (1910).

Eggs of the Jamaica Sugar-bird are of a regular oval shape and possess a small amount of gloss. They are cream-colour, densely speckled and mottled with pale chestnut-brown and blotched with faint underlying lavender. In one example the markings form an irregular zone round the broad end; in the other there is little or no trace of any zone. They measure respectively: .69 by .52; and .72 by .53.

2. Jamaica. Rev. Benjamin Zinke [P.].

Cæreba newtoni, Baird.

Certhiola flaveola, *A. & E. Newton (nec Linn.)*, *Ibis*, 1859, p. 67, pl. xii. fig. 3.

Sharpe, Hand-l. v. p. 343 (1909); *Nehr. Kat. Eiersamml.* p. 323 (1910).

The eggs of Newton's Sugar-bird closely resemble those of *C. flaveola* already described, but the ground-colour is pale cream-colour or white. The markings are densest at the broad end and form an irregular cap. Eight examples measure from .65 to .75 in length, and from .5 to .52 in breadth.

6. St. Croix, West Indies (*A. & E. Newton*). Salvin-Godman Coll.
 2. St. Croix, West Indies (*A. Newton*; *Tristram Coll.*). Crowley Bequest.

Cæreba dominicana (Taylor).

Certhiola dominicana, Taylor, *Ibis*, 1864, p. 167; *Laur. P. U. S. Nat. Mus.* i. p. 56 (1878); *Scl. Cat. Birds B. M.* xi. p. 44 (1886).

Certhiola sundevalli, Ridgw., *Scl. Cat. Birds B. M.* xi. p. 44 (1886).

Cæreba dominicana, Ridgw. *Birds North & Middle Amer.* ii. p. 417 (1902); Sharpe, *Hand-l.* v. p. 343 (1909); *Nehrck. Kat. Eiersamml.* p. 323 (1910).

Two eggs, said to be those of the Dominican Sugar-bird, differ somewhat from those of the previously described species and from the eggs of *C. dominicana* as described by the late G. N. Lawrence. They are of a rather long oval shape, somewhat pointed towards the smaller end and almost devoid of gloss. The ground-colour in one is very pale greenish-white, blotched and spotted, especially towards the larger end, with pale reddish-brown and dull reddish-purple; in the second egg the ground-colour is white, and the markings, which are much smaller and less defined, are mostly concentrated round the larger end. They measure respectively .65 by .44; and .63 by .43.

2. St. Andrew, Dominica, 18th March. Crowley Bequest.

Cæreba atrata (Laur.).

(Plate XIII. fig. 4.)

Certhiola atrata, Laur. *Ann. N. Y. Acad. Sci.* i. p. 149 (1878); *Scl. Cat. Birds B. M.* xi. p. 47 (1886).

Cæreba atrata, Ridgw. *Birds North & Middle Amer.* ii. p. 422 (1902); Sharpe, *Hand-l.* v. p. 344 (1909).

The eggs of the Black Sugar-bird are of a rather pointed oval shape and slightly glossy. They are pale creamy-white, densely marked at the larger end and sparingly elsewhere with chestnut-brown and underlying purplish-grey. In one egg the markings form a well-defined zone round the larger end; in the other a confluent cap. They measure respectively: .76 by .53; and .7 by .55.

2. St. Vincent, West Indies, April (Mrs. H. H. Smith). Salvin-Godman Coll.

Cæreba wellsi, Cory.

Certhiola atrata, Wells (*nec* Laur.), *P. U. S. Nat. Mus.* ix. p. 612 (1886); *Scl. Cat. Birds B. M.* xi. p. 47 (1886) [part, Grenada]; *Nehrck. Kat. Eiersamml.* p. 94 (1899).

Cæreba wellsi, Ridgw. *Birds North & Middle Amer.* ii. p. 423 (1902); Sharpe, *Hand-l.* v. p. 344 (1909); *Nehrck. Kat. Eiersamml.* p. 323 (1910).

Three eggs of Wells's Sugar-bird closely resemble those of

C. luteola described above, but are somewhat larger. They measure respectively: .72 by .50; .71 by .50; and .67 by .50.

3. Balthazar, Grenada (*J. G. Wells*). Crowley Bequest.

Genus **EUNEORNIS***, *Fitzinger*.

Euneornis campestris (*Linn.*).

(Plate XIII. fig. 19.)

Tanagrella ruficollis, *Gosse, Birds Jamaica*, p. 236 (1847).

Glossiptila ruficollis, *Scl. Cat. Birds B. M.* xi. p. 48 (1886); *Rüdgw. Birds North & Middle Amer.* ii. p. 424 (1902).

Euneornis campestris (*Linn.*), *Sharpe, Hand-l.* v. p. 344 (1909).

An egg of the Orange Quit is of a blunt oval shape and exhibits scarcely any gloss. It is of a pinkish-white colour, blotched and mottled all over the shell with brown and pale lilac-red. It measures .73 by .58.

1. St. Andrew, Jamaica.

Crowley Bequest.

Genus **DIGLOSSA**, *Wagler*.

Diglossa sittoides (*D'Orb. & Lafr.*).

Diglossa sittoides, *Scl. Cat. Birds B. M.* xi. p. 4 (1886); *Sharpe, Hand-l.* v. p. 345 (1909); *Nehrke, Kat. Eiersamml.* p. 323 (1910).

Eleven eggs, believed to be those of the Rufous-throated Sugar-bird, vary considerably in size and shape as well as in the coloration of the ground and markings. They vary in shape from a somewhat long and pointed oval to a very broad blunt oval, and are almost devoid of gloss. The ground-colour is pinkish-white, greenish-white, or pale green, and is generally thickly spotted all over the shell with brown or reddish-brown and dull lilac; in some there are well-marked spots and blotches of deep brown. They vary in size from .65 to .74 in length, and from .48 to .55 in breadth.

11. Venezuela.

Crowley Bequest.

* Dr. Sharpe has made use of this name, which has priority over *Glossiptila*, *Sclater*; the latter name appeared in the 'Proceedings of the Zoological Society,' no. cccxvii., which was not received from the printer till the 26th January, 1857 (*vide* C. D. Sherborn).

Diglossa albilateralis, *Lafr.*

(Plate XIII. fig. 18.)

Diglossa albilateralis, *Scl. & Salv. P. Z. S.* 1879, p. 496; *Scl. Cat. Birds B. M.* xi. p. 9 (1886); *Nehrk. Kat. Eiersamml.* p. 94 (1899); *Sharpe, Hand-l. v.* p. 346 (1909); *Nehrk. Kat. Eiersamml.* p. 323 (1910).

The eggs of the White-sided Sugar-bird are of a blunt oval shape and devoid of gloss. They are pale blue thickly spotted and blotched, especially towards the larger end of the egg where the markings become confluent, with dull reddish-brown and lilac-grey. Five examples measure respectively: .73 by .54; .71 by .5; .7 by .5; .68 by .5; .63 by .5.

Genus *DIGLOSSOPIS*, *Sclater*.*Diglossopsis cærulescens*, *Sclater*.

(Plate XIII. fig. 16.)

Diglossopsis cærulescens, *Scl. & Salv. P. Z. S.* 1879, p. 496; *Scl. Cat. Birds B. M.* xi. p. 11 (1886) [part]; *Nehrk. Kat. Eiersamml.* p. 94 (1899), & p. 323 (1910); *Sharpe, Hand-l. v.* p. 347 (1909).

The eggs of the Blue Sugar-bird are of a blunt oval shape and without gloss. They are greenish-white, thickly mottled and streaked with pale reddish-brown and lavender. The markings are distributed over the entire shell, but are more dense at the

broad end than elsewhere. Two examples measure respectively: .74 by .56; and .72 by .57.

2. Santa Elena, Antioquia, U.S. Salvin-Godman Coll.
Colombia (*T. K. Salmon*).

Genus **CONIROSTRUM**, *D'Orb. & Lafr.*

Conirostrum sitticolor, *Lafr.*

Conirostrum sitticolor, *Scl. Cat. Birds B. M.* xi. p. 13 (1886); *Sharpe, Hand-l.* v. p. 347 (1909).

An egg, said to be that of the Black-throated Sugar-bird, is of a regular oval form and devoid of gloss. The ground-colour is pale greenish-white blotched and spotted, especially towards the larger end, with lilac-grey, and with a few small purplish-black spots scattered over the shell. It measures .78 by .52.

1. Bogota, U.S. Colombia (*Tristram Coll.*) Crowley Bequest.

Family TANAGRIDÆ.

Genus **EUPHONIA**, *Desmarest.*

Euphonia nigricollis (*Vieill.*).

Euphonia nigricollis, *Scl. Cat. Birds B. M.* xi. p. 61 (1886); *Sharpe, Hand-l.* v. p. 355 (1909).

Three eggs of the Black-necked Euphonia are of a slightly pointed oval form and devoid of gloss. They are uniform greenish-white and measure respectively: .69 by .5; .69 by .45; and .63 by .5.

3. Venezuela. Crowley Bequest.

Euphonia elegantissima (*Bonap.*).

Euphonia elegantissima, *Scl. P. Z. S.* 1859, p. 378; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 256 (1883); *Scl. Cat. Birds B. M.* xi. p. 62 (1886); *Ridgw. Birds North & Middle Amer.* ii. p. 12 (1902); *Sharpe, Hand-l.* v. p. 356 (1909); *Nehrk. Kat. Eiersamml.* p. 324 (1910).

The eggs of the Blue-headed Euphonia are spheroidal in shape and almost devoid of gloss. The ground-colour is creamy-white very sparingly spotted, in one specimen with purplish-brown and lavender, and in another with brownish-pink and a few minute

specks of a darker colour. The markings are few in number and almost entirely confined to the broader half of the egg. Two examples measure respectively: .62 by .51; and .66 by .51.

A third egg from Costa Rica, referred to this species by Mr. Underwood, differs much from the above. It has the ground white, minutely but not very thickly speckled all over with pale lavender-grey and purplish-red. It measures .7 by .52.

Euphonia hirundinacea, Bonap.

Euphonia hirundinacea, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 261 (1883); *Sci. Cat. Birds B. M.* xi. p. 75 (1886); **Cherrie, 'Auk'* ix. p. 24 (1892); *Ridgw. Birds North & Middle Amer.* ii. p. 27 (1902) [part]; *Sharpe, Hand-l. v.* p. 359 (1909); *Nehr. Kat. Eiersamml.* p. 325, pl. iii. fig. 29 (1910).

The eggs of Bonaparte's *Euphonia* resemble those of *E. affinis*, both in colour and size.

- | | |
|---|---------------------|
| 1. Valladolid, Yucatan (<i>G. F. Gaumer</i>). | Salvin-Godman Coll. |
| 2. Yucatan. | Crowley Bequest. |
| 2. Yucatan (<i>Nehrkorn Coll.</i>). | Crowley Bequest. |

* Cherrie described the eggs as being "white, thickly speckled in a ring about the larger end with light walnut-brown and over this some larger spots of seal-brown," &c. This description agrees with the eggs of *E. elegantissima*, which species was also procured. Possibly some mistake has been made by the collector in identifying the parent bird. Eggs of *E. hirundinacea* described and figured by Nehrkorn resemble those procured by G. F. Gaumer, and are of a uniform greenish-blue colour.

Genus **PYRRHUPHONIA**, *Bonap.***Pyrrhuphonia jamaica** (*Linn.*).

(Plate XIII. fig. 20.)

Euphonia jamaica, *Gosse, Birds of Jamaica*, p. 233 (1847).*Pyrrhuphonia jamaica*, *Scl. Cat. Birds B. M.* xi. p. 85 (1886); *Ridgw. Birds North & Middle Amer.* ii. p. 31 (1902); *Sharpe, Hand-l.* v. p. 360 (1909).

Four eggs of the Blue Quit are of a somewhat pointed oval shape and slightly glossy. The ground in all four eggs is white. In two most of the markings, consisting of purplish-red and lavender spots, are concentrated round the larger end and form a zone; in the other two, numerous markings of pale purplish-red are scattered over the entire shell, though they are most numerous at the larger end, where they form a zone. They measure respectively: .78 by .57; .78 by .55; .79 by .55; and .77 by .57.

Calospiza cayana, *Sharpe, Hand-l.* v. p. 367 (1909); *Nehr. Kat. Eiersamml.* p. 325 (1910).

Three eggs, said to be those of the Guiana Tanager, are of a nearly perfect oval shape and somewhat glossy. The ground-colour is pale blue, spotted with dark purplish-red and blotched with lilac-grey, chiefly at the larger end, though the markings are scattered over the entire shell. They measure respectively: .87 by .6; .87 by .55; and .85 by .53.

Tanagra cana, Swains.

Tanagra cana, *Scl. & Salv. P. Z. S.* 1879, p. 500; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 277 (1883); *Scl. Cat. Birds B. M.* xi. p. 156 (1886); *Nehrkr. Kat. Eiersamml.* p. 95 (1899), p. 326 (1910); *Ihering, Rev. Mus. Paulista*, iv. p. 209 (1900); *Ridgw. Birds North & Middle Amer.* ii. p. 55 (1902); *Sharpe, Hand-l.* v. p. 377 (1910).

Some eggs of the Silver-blue Tanager are of a blunt oval shape, approaching the elliptical, and without gloss. The ground is cream-colour, but this is almost entirely concealed from view by the markings, which consist of more or less confluent smears, streaks and clouds of two or more shades of rich brown. Some examples are also minutely spotted with dark reddish-brown, almost black in intensity. Other eggs collected by Blancaneaux are of a somewhat narrow oval shape and are less densely marked, quite half the ground-colour being visible. They are speckled and mottled with brown, purplish-brown and lavender-grey. Some of these have hair-lines of a dark colour at the broad end. Specimens measure from .83 to 1 in length, and from .6 to .66 in breadth.

Tanagra cyanoptera (Peill.).

Tanagra cyanoptera, *Scl. Cat. Birds B. M.* xi. p. 157 (1886) *Nehr. Kat. Eiersamml.* p. 95 (1899), p. 326 (1910); *Ihering, Rev. Mus. Paulista*, iv. p. 209 (1900); *Sharpe, Hand-l. v.* p. 378 (1909).

Two eggs of the Blue-shouldered Tanager resemble those of *T. ornata**, and differ entirely from those of the other species of the genus represented in the Collection. They are pale blue, sparingly marked all over with small, well-defined, roundish spots of very dark purplish-black. One example measures .9 by .7.

2. Rio de Janeiro.

Alexander Fry, Esq. [P.].

Tanagra sayaca, Linn.

(Plate XIII. figs. 5 & 8.)

Tanagra sayaca, *Euler, J. f. O.* 1867, p. 410; *Scl. Cat. Birds B. M.* xi. p. 158 (1886); *Berlepsch, J. f. O.* 1887, pp. 6, 115; *Euler, Rev. Mus. Paulista*, iv. p. 20 (1900); *Ihering, Rev. Mus. Paulista*, iv. pp. 153, 209 (1900); *Sharpe, Hand-l. v.* p. 378 (1909); *Nehr. Kat. Eiersamml.* p. 326 (1910); *Chubb, Ibis*, 1910, p. 625.

Eggs of the Grey-breasted Tanager vary in shape from a very long pointed oval to nearly spheroidal. The ground varies from white to creamy-white or greenish-white. In some examples the markings are remarkably like those found in the commonest type of *Passer domesticus*, the entire shell being thickly clouded and blotched with grey-brown and umber-brown. In others a large part of the ground-colour is visible, the markings, which consist of cloudings, spots and streaks of purplish-grey and dark purplish-brown, being mostly confined to the larger end of the shell. In a third type all the markings are fine and there are no very distinct dark spots or streaks, the larger end of the shell being surrounded by a heavy clouded zone. They vary from .87 to 1.1 in length, and from .61 to .67 in breadth.

- Tanagra melanoptera*, *Sharpe, Hand-l.* v. p. 378 (1909).

Two eggs of the Black-winged Tanager vary considerably. One example is nearly a perfect ellipse in shape, cream-coloured, and very thickly freckled all over with pale brown and lavender. At the broader end there are a few fine hair-lines of black. The second example is of a pointed oval shape, cream-coloured, densely mottled all over with pale brown, dark brown and lavender-grey. They measure respectively: .91 by .64; .93 by .65.

2. Remedios, Antioquia, U.S. Salvín-Godman Coll.
Colombia (*T. K. Salmon*).

Tanagra ornata, Sparrm.

- Tanagra ornata*, *Scl. Cat. Birds B. M.* xi. p. 161 (1886); *Nehrk. Kat. Eiersamm.* p. 96 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 209 (1900); *Sharpe, Hand-l.* v. p. 378 (1909); *Nehrk. Kat. Eiersamm.* p. 326 (1910).

An egg of the Archbishop Tanager is of a long pointed oval form, and displays scarcely any gloss. It is white, thickly clouded and blotched all over the shell with purplish-grey, with scattered spots, streaks and irregular markings of deep purplish-brown. It measures 1.1 by .71.

1. Iguape, São Paulo, 4th Oct. Crowley Bequest.

Tanagra abbas, Licht.

- Tanagra vicarius*, *Bonap.*; *Scl. & Salv. Ibis*, 1859, p. 16, pl. v. fig. 1.
- Tanagra abbas*, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 278 (1883); *Scl. Cat. Birds B. M.* xi. p. 162 (1886); *Ridgway, Birds North & Middle Amer.* ii. p. 60 (1902); *Sharpe, Hand-l.* v. p. 378 (1909).

The eggs of the Blue-headed Tanager resemble those of *Calospiza atricapilla* in many respects. They are of a broad oval shape, and exhibit a considerable amount of gloss. The ground-colour is dull greenish-white rather thickly marked, especially at the broad end, where the markings are more or less confluent, with spots and blotches of brown and lavender-grey and with a few specks and spots of very deep chocolate-brown. Two examples measure respectively .87 by .67; .89 by .65.

2. Dueñas, Guatemala, 30th May Salvin-Godman Coll.

Piranga erythromelas, *Ridgw. Birds North & Middle Amer.* ii. p. 88 (1902).

The eggs of the Scarlet Tanager are of a broad oval shape and exhibit a small amount of gloss. They are pale greenish-blue, thickly spotted and blotched with pale reddish-brown and lilac-grey. The markings are more numerous as well as larger at the broad end, and in one example form a large ill-defined cap. They measure from .85 to .96 in length, and from .68 to .72 in breadth.

Phænicothraupis rubicoides, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 300 (1883); *Scl. Cat. Birds B. M.* xi. p. 197 (1886); *Sharpe, Hand-l. v.* p. 389 (1909).

Phænicothraupis rubica rubicoides, *Ridgw. Birds North & Middle Amer.* ii. p. 144 (1902).

The eggs of the Mexican Ant-Tanager appear to be of two types. Those taken by Salvin in Guatemala are of an ordinary oval shape and slightly glossy. They are white, thickly mottled, but chiefly at the broad end, with pale brownish-yellow and faint lavender. They measure respectively: .92 by .67; .9 by .7; .94 by .68.

Eggs taken by Blancaneaux in British Honduras are of a narrow oval shape and exhibit a considerable amount of gloss. They are plain white, and measure respectively: 1 by .69; 1 by .67.

Tachyphonus melancleucus, *Nehrk. Kat. Eiersamml.* p. 97 (1899).

The eggs of the Black Tanager vary in shape from a narrow to a broad oval and exhibit a small amount of gloss. They are greyish-pink, marked with some isolated spots, blotches, and twisted lines of the deepest chocolate-brown or black. The

edges of the blotches are frequently reddish and blend with the surrounding ground-colour. The underlying markings are few and inconspicuous and consist of spots and veins of pale lavender. Five examples measure from .95 to 1.03 in length, and from .7 to .78 in breadth.

Pyromelana diademata, *Sharpe, Cat. Birds B. M.* xiii. p. 236 (1890);
id., Hand-l. v. p. 416 (1909); *Nehrke, Kat. Eiersamml.* p. 330 (1910).

An egg said to that of the Fire-fronted Bishop-bird is of rather a wide oval shape and distinctly glossy. The ground-colour is pale greenish-white, rather profusely marked over the greater part of the shell with distinct dots of reddish-chestnut and lilac-grey.

It measures .55 by .44. This specimen agrees exactly with the description and measurements given by Nehrkorn.

1. Zanzibar.

Crowley Bequest.

Pyromelana capensis (Linn.).

(Plate XIV. fig. 6.)

Pyromelana capensis, Sharpe, ed. Layard, *Birds S. Africa*, p. 463 (1875-84); *id.*, *Cat. Birds B. M.* xiii. p. 236 (1890); *Nehrk. Kat. Eiersamml.* p. 124 (1899), p. 330 (1910); *Stark, Fauna S. Afr., Birds*, i. p. 130 (1900); *Shelley, Birds Afr.* iv. p. 73 (1905); *Sharpe, Hand-l.* v. p. 416 (1909).

Orynx capensis, Kuschel, *J. f. O.* 1895, p. 337.

Euplectes capensis, Reich, *Vög. Afr.* iii. p. 126 (1904).

Eggs of the Black-and-Yellow Bishop-bird are almost elliptical in shape, the two ends being but very slightly dissimilar; they are somewhat glossy. They are of a pale-green colour, thickly blotched and streaked with ash-brown and pale purplish-grey. The markings are more or less confluent over the whole shell. They measure from .75 to .88 in length, and from .58 to .63 in breadth.

Genus **PLOCEIPASSER**, *Smith*.

Ploceipasser mahali, *Smith*.

(Plate XIV. fig. 7.)

Ploceipasser mahali, *Gurney, in Andersson's Birds Damara.* p. 166 (1872); *Buckley, Ibis*, 1874, p. 380; *Shelley, Ibis*, 1882, p. 351; *Sharpe, ed. Layard, Birds S. Africa*, p. 447 (1875-84); *Kuschel, J. f. O.* 1895, p. 335; *Reich. Vög. Afr.* iii. p. 11 (1904); *Shelley, Birds Afr.* iv. p. 325 (1905).

Ploceipasser mahali, *Stark, Fauna S. Afr., Birds*, i. p. 83 (1900); *Sharpe, Hand-l.* v. p. 417 (1909).

An egg of the White-browed Weaver-bird is of a rather long and slightly pointed oval shape, and almost devoid of gloss. It is white suffused with pink, and faintly mottled with pinkish-grey. It measures .92 by .65—a measurement which appears to be unusually small. Stark gives 1.0 by 0.72.

1. Kruger's Drift, Modder River, Hon. J. A. Bucknill [P].
 O. R. C., 2nd Oct. (C. B.
 Horsbrugh).

Genus **PHILÆTERUS**, *Smith*.

Philæterus socius (*Lath.*).

Philæterus socius, *Anderss. Birds Damara.* p. 167 (1872); *Kuschel, J. f. O.* 1895, p. 335; *Stark, Fauna S. Afr., Birds*, i. p. 115 (1900).
Philæterus socius, *Sharpe, ed. Layard, Birds S. Africa*, p. 449 (1875-84).
Philæterus socius, *Sharpe, Cat. Birds B. M.* xiii. p. 249 (1890); *id., Hand-l.* v. p. 419 (1909).

Philetairus socius, *Reich. Vög. Afr.* iii. p. 242 (1904); *Shelley, Birds Afr.* iv. p. 130 (1905).

Two eggs of the Sociable Weaver-bird are of a broad oval shape and devoid of gloss. They are of a very pale yellowish-white colour, densely speckled and mottled all over with purplish-grey. They measure respectively: $\cdot 78$ by $\cdot 62$; $\cdot 8$ by $\cdot 62$.

Another egg, also referred to this species, is pale bluish-green sparingly spotted with distinct spots and dots of dark brown and purplish-grey. It measures about $\cdot 77$ by $\cdot 59$. The description given in Sharpe's edition of Layard seems to refer to an egg of this type.

2. Ondonga, Ovampoland (*C. J. Andersson: Tristram Coll.*). Crowley Bequest.
1. Kalahari Desert (*J. J. Weir*). Crowley Bequest.

Genus **PSEUDONIGRITA**, *Reichenow*.

Pseudonigrita arnaudi (*Bonap.*).

(Plate XIV. fig. 8.)

Nigrita arnaudi, *Heugl. Orn. N.O.-Afr.* i. p. 541 (1871); *Fischer, Zeit. ges. Orn.* i. p. 329 (1884); *Hartl. J. f. O.* 1887, p. 310; *Kuschel, J. f. O.* 1895, p. 336.

Philæterus arnaudi, *Sharpe, Cat. Birds B. M.* xiii. p. 250 (1890).

Pseudonigrita arnaudi, *Reich. Vög. Afr.* iii. p. 171 (1904); *Sharpe, Hand-l.* v. p. 421 (1909).

Philetairus arnaudi, *Shelley, Birds Afr.* iv. p. 132 (1905).

An egg of Arnaud's Social Weaver is of a regular oval shape and devoid of gloss. It is white with small spots and dots of yellowish-umber scattered all over the shell, but most numerous towards the larger end. It measures $\cdot 77$ by $\cdot 51$.

1. Machakos, B. E. Africa, 4th April. F. J. Jackson, Esq. [C.].

Genus **PYRENESTES**, *Swains*.

Pyrenestes ostrinus (*Vieill.*).

Pyrenestes ostrinus, *Sharpe, Cat. Birds B. M.* xiii. p. 252 (1890); *Kuschel, J. f. O.* 1895, p. 336; *Reich. Vög. Afr.* iii. p. 106 (1904); *Shelley, Birds Afr.* iv. p. 284 (1905); *Sharpe, Hand-l.* v. p. 422 (1909); *Nehrk. Kat. Eiersamml.* p. 330 (1910).

Four eggs of Vieillot's Knotch-billed Weaver are of a rather short oval shape, pure white and without gloss. They measure respectively: $\cdot 68$ by $\cdot 55$; $\cdot 68$ by $\cdot 55$; $\cdot 68$ by $\cdot 52$; and $\cdot 67$ by $\cdot 53$.

Eggs of this species have been described by Nehrkorn and others as yellowish-white or salmon-colour, with underlying yellowish-brown marks and clear reddish-brown spots.

There is no reason to doubt the correctness of Mr. Kemp's identification, and probably those described by Nehrkorn have been wrongly referred to this species.

4. Abutja, R. Niger, Sept. R. Kemp, Esq. [C.].

Genus **QUELEA**, *Reichenb.***Quelea erythropis** (*Hartl.*).

Quelea erythropis, *Sharpe, Cat. Birds B. M.* xiii. p. 255 (1890); *Kuschel, J. f. O.* 1895, p. 336; *Reich. Vög. Afr.* iii. p. 111 (1904); *Shelley, Birds Afr.* iv. p. 117 (1905); *Sharpe, Hand-l.* v. p. 422 (1909); *Nehrck. Kat. Eiersamml.* p. 331 (1910).

An egg of the Dark-throated Dioch is of a rather short oval shape and almost devoid of gloss. It is dull olive-green with fine scattered spots of a darker shade, most numerous towards the larger end. It measures .7 by .55.

1. West Africa (*Nehrckorn Coll.*). Crowley Bequest.

Quelea cardinalis (*Hartl.*).

(Plate XIV. fig. 11.)

Hyphantica cardinalis, *Hartl. Abhandl. Nat. Ver. Bremen*, vii. p. 102 (1881); *Fischer, Zeit. ges. Orn.* i. p. 328 (1884).

Quelea cardinalis, *Sharpe, Cat. Birds B. M.* xiii. p. 256 (1890); *Reich. Vög. Afr.* iii. p. 112 (1904); *Shelley, Birds Afr.* iv. p. 119 (1905); *Sharpe, Hand-l.* v. p. 423 (1909); *Nehrck. Kat. Eiersamml.* p. 331, pl. iii. fig. 34 (1910).

Eggs of the Cardinal Dioch vary in shape from a rather short oval to a pointed oval, and exhibit a certain amount of gloss. The ground-colour is greenish-white or white more or less thickly spotted all over the shell with reddish-brown or purplish-brown and underlying spots and small blotches of grey. They vary in size from .67 to .72 in length, and from .47 to .5 in breadth.

Genus **ZONÆGINTHUS**, *Cab.***Zonæginthus bellus** (*Lath.*).

Zonæginthus bellus, *Gould, Handb. Birds Austr.* i. p. 406 (1865); *North, Nests & Eggs Austr. Birds*, p. 160 (1889); *Sharpe, Cat. Birds B. M.* xiii. p. 293 (1890); *Nehrk. Kat. Eiersamml.* p. 126 (1899), p. 332 (1910); *Campbell, Nests & Eggs Austr. Birds*, i. p. 479 (1901); *North, Nests & Eggs Austr. Birds*, ii. p. 271 (1909); *Sharpe, Hand-l.* v. p. 433 (1909).

The eggs of the Fire-tailed Finch are of an elongate oval shape, without gloss, and plain white. They appear to vary greatly in size. Two specimens from Tasmania measure respectively: .75 by .52; .75 by .5. Three from Cranbourne measure respectively: .76 by .53; .75 by .57; and .74 by .55. Others from Cape Otway and from Melbourne, taken by Mr. Bridger, are very much smaller and average only .65 by .45.

3. Cranbourne, Victoria, 3rd Nov. (*A. J. Crowley Bequest.*
J. North).
2. Cape Otway, Victoria, (*E. P. S y-* *Crowley Bequest.*
mour).
6. Melbourne (*W. Bridger*). *Salvin-Godman Coll.*
2. Tasmania, 17th Nov. *Gould Coll.*

Zonæginthus oculatus (*Quoy & Gaim.*).

Zonæginthus oculus, *Gould, Handb. Birds Austr.* i. p. 407 (1865).
Zonæginthus oculatus, *Sharpe, Cat. Birds B. M.* xiii. p. 294 (1890);
Nehrk. Kat. Eiersamml. p. 126 (1899), p. 332 (1910); *Campbell,*
Nests & Eggs Austr. Birds, i. p. 480 (1901); *Sharpe, Hand-l.* v.
p. 433 (1909).

Two eggs of the Red-eared Finch are of a somewhat elongate oval form, devoid of gloss, and pure white. They measure respectively: .69 by .49, and .65 by .46.

2. W. Australia (*A. J. Campbell*). *Crowley Bequest.*

Genus **COCCOPYGIA**, *Reichenb.***Coccopygia dufresnei** (*Vieill.*).

Estrellda dufresnii, *Gurney, Ibis*, 1862, p. 32; *Sharpe, ed. Layard, Birds*
S. Africa, p. 469 (1875-84); *Stark, Faun. S. Africa, Birds*, i.
p. 107 (1900).

Coccopygia dufresnii, *Sharpe, Cat. Birds B. M.* xiii. p. 305 (1890);
Shelley, Birds Afr. iv. p. 233 (1905); *Sharpe, Hand-l.* v. p. 436
(1909); *Nehrk. Kat. Eiersamml.* p. 332 (1910).

Neisna dufresnei, *Reich. Vög. Afr.* iii. p. 205 (1904).

The eggs of Dufresne's Waxbill are of an ordinary oval form,

devoid of gloss, and plain white. They measure from .51 to .57 in length, and from .4 to .42 in breadth.

Genus STICTOPTERA, *Reichenb.*

Stictoptera bichenovii (*Vig. & Horsf.*).

Stictoptera bichenovii, *Gould, Handb. Birds Austr.* i. p. 409 (1865); *North, Nests & Eggs Austr. Birds*, p. 160 (1889); *Sharpe, Cat. Birds B. M.* xiii. p. 313 (1890); *Nehrck. Kat. Eiersamml.* p. 126 (1899), p. 332 (1910); *Campbell, Nests & Eggs Austr. Birds*, i. p. 485 (1901); *North, Nests & Eggs Austr. Birds*, ii. p. 279 (1909); *Sharpe, Hand-l.* v. p. 438 (1909).

The eggs of the Banded Finch are of a narrow oval form, without gloss, and plain white. Two examples measure respectively: .65 by .47; .6 by .45.

- | | |
|--------------------------------------|-------------|
| 1. Australia. | Old Coll. |
| 1. West Australia (<i>Wilson</i>). | Gould Coll. |

Genus **SPORÆGINTHUS**, *Cab.*

The eggs of the Munias of this genus are typically of an elongate pointed oval form, devoid of gloss, and plain white.

Sporæginthus amandava (*Linn.*).

Sporæginthus amandava, *Sharpe, Cat. Birds B. M.* xiii. p. 320 (1890); *Oates, Faun. Brit. Ind., Birds*, ii. p. 192 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 147 (1899); *Betham, Journ. Bom. Nat. Hist. Soc.* xii. p. 781 (1899); *Sharpe, Hand-l.* v. p. 439 (1909); *Nehrk. Kat. Eiersamml.* p. 332 (1910).

Eggs of the Indian Red Munia measure from .55 to .65 in length, and from .4 to .45 in breadth.

1. India (*Capt. C. R. Cock: Tristram Crowley Bequest. Coll.*).
17. Raipur, C. Provs., India (*F. R. Hume Coll. Blewitt*).
1. Saugor, C. Provs. Hume Coll.
3. Nilghiri Hills, May. Hume Coll.

Sporæginthus flavidiventris (*Wallace*).

Sporæginthus flavidiventris, *Sharpe, Cat. Birds B. M.* xiii. p. 323 (1890); *Oates, Fauna Brit. Ind., Birds*, ii. p. 193 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 149 (1899); *Sharpe, Hand-l.* v. p. 439 (1909); *Nehrk. Kat. Eiersamml.* p. 332 (1910).

The eggs of the Burmese Red Munia are inseparable from those of *S. amandava*.

5. Pegu, 2nd Nov. (*E. W. Oates*). Hume Coll.
2. Pegu, 15th Nov. (*E. W. O.*). Hume Coll.
5. Pegu, 12th Dec. (*E. W. O.*). Oates Coll.

Sporæginthus subflavus (*Vieill.*).

Sporæginthus subflavus, *Sharpe, Cat. Birds B. M.* xiii. p. 324 (1890); *Kuschel, J. f. O.* 1895, p. 339; *Sharpe, Hand-l.* v. p. 439 (1909); *Nehrk. Kat. Eiersamml.* p. 332 (1910).

Estrela subflava, *Reich. Vög. Afr.* iii. p. 186 (1904); *Shelley, Birds Afr.* iv. p. 207 (1905).

An egg of the Northern Zebra Waxbill is of a rather pointed oval shape and without gloss. It is pure white, and measures .61 by .4.

1. West Africa. Crowley Bequest.

Sporæginthus melpodus (*Vieill.*).

Sporæginthus melpodus, *Sharpe, Cat. Birds B. M.* xiii. p. 325 (1890); *Kuschel, J. f. O.* 1895, p. 339; *Butler, Foreign Finches in Captivity*, p. 110 (1895); *Sharpe, Hand-l.* v. p. 439 (1909).
Estrela mariposa (sic), *Rendall, Ibis*, 1892, p. 221.
Estrela melpoda, *Reich. Vög. Afr.* iii. p. 186 (1904); *Shelley, Birds Afr.* iv. p. 202 (1905).

An egg of the Orange-cheeked Waxbill is of a rather narrow oval shape, and dull white. It measures .58 by .36.

1. Laid in captivity (*Dr. Kutter*). Crowley Bequest.

Genus **MUNIA**, *Hodgs.*

The eggs laid by the various species of this genus resemble those of the species of *Sporæginthus*, being usually of a somewhat pointed oval shape, pure white, and devoid of gloss.

Munia orizivora (*Linn.*).

Munia orizivora, *Sharpe, Cat. Birds B. M.* xiii. p. 328 (1890); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 128 (1890); *id., Fauna Brit. Ind., Birds*, ii. p. 182 (1890); *Sharpe, Hand-l.* v. p. 439 (1909); *Nehr. Kat. Eiersamml.* p. 332 (1910).
Padda oryzivora, *Shelley, Birds Afr.* iv. p. 148 (1905).

Two eggs of the Java Sparrow are of a regular oval form, devoid of gloss, and pure white. They measure respectively: .77 by .53; .68 by .65.

2. West Africa. Crowley Bequest.

Munia malacca (*Linn.*).

Munia malacca, *Legge, Birds Ceylon*, p. 652 (1879); *Sharpe, Cat. Birds B. M.* xiii. p. 330 (1890); *Oates, Fauna Brit. Ind., Birds*, ii. p. 182 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 126 (1890); *Sharpe, Hand-l.* v. p. 440 (1909); *Nehr. Kat. Eiersamml.* p. 332 (1910).

The eggs of the Black-headed Munia measure from .57 to .72 in length, and from .44 to .5 in breadth.

(Plate XIV. figs. 10 & 12.)

Sporopipes squamifrons, *Gurney*, in *Anderss. Birds Damaral.* p. 177 (1872); *Sharpe, ed. Layard's Birds S. Afr.* p. 451 (1875-84); *id., Cat. Birds B. M.* xiii. p. 407 (1890); *Kuschel, J. f. O.* 1895, p. 336; *Stark, Fauna S. Afr., Birds*, i. p. 86 (1900); *Reich. Vög. Afr.* iii. p. 16 (1904); *Shelley, Birds Afr.* iv. p. 298 (1905); *Roberts, J. S. Afr. Orn. U.* ii. p. 11 (1906); *Sharpe, Hand-l.* v. p. 457 (1909).

Four eggs of the Scaly-fronted Weaver-bird are of a slightly pointed oval form and devoid of gloss. In three the ground-colour is pale greenish-white heavily blotched over the greater part of the shell with ash-brown and dull lilac; with a few scattered spots and twisted serawls of darker brown. In the fourth the ground-colour is pale blue heavily mottled and clouded, especially about the larger end, with dark lilac-grey with rather indistinct and blurred umber-brown spots and markings round the middle. They measure respectively: .65 by .46; .63 by .46; .61 by .45; .6 by .43.

Sycobrotus gregalis, *Shelley, Birds Afr.* iv. p. 366 (1905); *Sharpe, Hand-l.* v. p. 463 (1909).

Twelve eggs of the Black-backed Weaver-bird differ but little in colour, shape, and markings. They are of a rather long oval shape, with little or no gloss. The ground-colour is pale blue or pale greenish-blue, profusely spotted all over the shell with light red and lilac-grey, the markings varying from the size of a pin's head to minute dots. They vary in length from '85 to '91, and in breadth from '6 to '62.

The eggs of Reichenow's Weaver-Finch are of a rather long oval form and devoid of gloss. The ground is pale pinkish white, with small blotches and spots of light red and lilac-grey scattered over the entire shell, but rather more numerous towards the larger end. They measure respectively: '89 by '6, and '85 by '6.

Heterhyphantes nigricollis (*Vieill.*).

(Plate XIV. figs. 14 & 15.)

Heterhyphantes nigricollis, *Sharpe, Cat. Birds B. M.* xiii. p. 415 (1890); *Shelley, Birds Afr.* iv. p. 381 (1905); *Sharpe, Hand-l.* v. p. 467 (1909).
Symplectes nigricollis (*Vieill.*), *Kuschel, J. f. O.* 1895, p. 335.
Ploceus nigricollis, *Reich. Vög. Afr.* iii. p. 44 (1904).

One egg of Vieillot's Black-and-Yellow Weaver-Finch is of a somewhat elongate oval shape and slightly glossy. The ground-colour is pale greenish-blue, with small and rather blurred spots of reddish-brown and faint violet-grey scattered all over the shell, but rather more numerous towards the larger end. It measures .85 by .58.

Two eggs collected by Mr. Bates have the ground pinkish-white, and are finely freckled all over with small spots and dots of pale light red and lilac-grey, the markings being most numerous at the larger end. They measure respectively: .83 by .6, and .75 by .58.

Ten eggs of the Orange Weaver-Finch taken by Mr. Jackson at Entebbe are of a rather long oval shape and without gloss. They present two different types of coloration. In one clutch the ground is pale blue, rather thickly marked all over with spots and small blotches of dull purplish and lilac. In the other four clutches the ground, which is mostly obscured, varies from pale greenish-buff to greyish, and is more or less densely clouded or blotched and spotted with purplish or dull chestnut and lilac. Some have the markings more or less clearly defined, in others they are suffused. They vary in length from .85 to .9, and in width from .55 to .59.

Thirteen eggs of the Uganda Black-and-Yellow Mantled Weaver-Finch are all of a rather long pointed oval shape and have little or no gloss. The ground varies from white to pale greenish-white, greenish-blue, and pale blue. Some examples are uniform or nearly so, others are more or less profusely marked with small spots and sometimes small blotches of reddish-lilac or reddish-brown and pale lavender-grey. They vary in length from ·90 to ·98, and in width from ·59 to ·65.

Sitagra jacksoni, *Sharpe, Hand-l.* v. p. 472 (1909); *Nehrk. Kat. Eiersamml.* p. 337 (1910).

Eggs of Jackson's Golden-backed Weaver-Finch are of a blunt

oval form and devoid of gloss. The ground is pale greenish-blue, in one instance creamy-white, and the markings are of three different types: (1) finely and closely freckled all over with dull purplish-brown and lilac-grey; (2) thickly blotched and spotted with the same colours, the markings being concentrated towards the larger end and forming a more or less irregular cap; (3) rather sparingly marked with distinct rounded spots, marks, and blotches of deep chocolate-brown and pale lilac. They vary from .76 to .86 in length, and from .55 to .58 in breadth.

Sitagra velata, *Sharpe, Hand-l.* v. p. 474 (1909); *Nehrk. Kat. Eiersamml.* p. 338 (1910).

A large series of eggs of the Black-fronted Weaver-Finch vary greatly in shape, size, and coloration. They are mostly lengthened ovals, some pointed sharply at one end, others blunt, and not a few specimens are cylindrical, with the two ends quite similar. The following types of coloration occur: white with a few extremely minute brown specks; cream-colour, spotted and mottled with chestnut-brown and pale purple; cream-colour, marked with rich chestnut, chocolate-brown, and purple; light green, densely marked with minute specks and some spots of chestnut-brown and pale purple; greenish-blue, boldly blotched with chestnut and pale purple; blue, distinctly spotted with chestnut, chocolate, and purple. Specimens intermediate between any two of these types are also to be found. They vary from .75 to 1.05 in length, and from .45 to .68 in breadth.

Sitagra bojeri, Sharpe, *Hand-l.* v. p. 477 (1909); *Nehrsk. Kat. Eiersamml.* p. 339 (1910).

Seven eggs of Bojer's Golden Weaver-Finch are of a rather pointed oval form and slightly glossy. They vary greatly in colour, the ground being greyish-white, pale yellowish-brown, pale greenish-blue, or rather deep greyish-green, more or less distinctly spotted and freckled all over with dull purplish, pinkish-brown, or greyish-brown. In an egg with the ground-colour yellowish-brown,

the markings are very faint and merely indicated by indistinct cloudings of a darker shade. They vary in length from ·73 to ·83, and in width from ·53 to ·57.

Sitagra galbula, *Sharpe, Hand-l.* v. p. 477 (1909); *Nehrke. Kat. Eiersamml.* p. 339 (1910).

The eggs of the Golden Weaver-Finch are of an elongate oval shape and devoid of gloss. They are of two types: those with the ground pale blue, and those with the ground white or creamy-white. The pale blue eggs are either thickly speckled and spotted with lilac and pale reddish-brown, or marked with numerous specks and some spots of dark chocolate-brown or purplish-black and underlying pale purple. The white or cream-coloured eggs are either heavily blotched and spotted with light red and purplish-grey, or more finely marked with small spots and dots of purplish-brown and lilac-grey. They measure from ·8 to ·88 in length, and from ·54 to ·6 in breadth.

Genus **PLOCEËLLA**, *Oates*.**Ploceëlla javanensis** (*Less.*).

(Plate XV. figs. 17 & 20.)

Ploceëlla javanensis, *Oates*, *Fauna Brit. Ind., Birds*, ii. p. 180 (1890); *id.*, *ed. Hume*, *Nests & Eggs Ind. Birds*, ii. p. 124 (1890); *Sharpe*, *Cat. Birds B. M.* xiii. p. 474 (1890); *id.*, *Hand-l.* v. p. 480 (1909); *Nehrk. Kat. Eiersamml.* p. 339 (1910).

The eggs of the Burmese Golden Weaver-Finch are generally of a pointed oval shape and possess a considerable amount of gloss. They are varied in colour and Mr. Hume thus describes them:—"The ground-colour is white, greenish or greyish-white, a delicate dove-grey or pale purplish stone-colour; and while one or two of the

latter colour are quite free from markings, the great majority are some thinly, some thickly, speckled and finely freckled with pale greyish, greenish or purplish neutral tint. The markings, except an occasional black hair-line, are, in at least two-thirds of the eggs, so minute that, looked at from a distance of a couple of feet, the eggs appear to be of one uniform grey, some darker, some lighter, some with a sepia tinge, some with a slight brown tinge, some with the faintest possible purple shade, some greenish; but a grey stone-colour is the prevailing tint of a large body of eggs, amongst which perhaps one in twenty or thirty is pure white with only a few brown specks scattered here and there, and a good many, perhaps one in ten, are a very pale grey, which look white amongst the darker varieties, though when placed beside a white egg they are distinctly grey." They measure from .68 to .78 in length, and from .52 to .58 in breadth.

Genus PLOCEUS, Cuvier.

Ploceus baya, Blyth.

- Ploceus philippinus*, *Layard, A. M. N. H.* 2nd ser. xiii. p. 257 (1854); *Legge, Birds Ceylon*, p. 641 (1879).
Ploceus baya, *Oates, Fauna Brit. Ind., Birds*, ii. p. 175 (1890); *id., ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 114 (1890); *Sharpe, Cat. Birds B. M.* xiii. p. 488 (1890); *id., Hand-l.* v. p. 480 (1909); *Nelrk. Kat. Eiersamml.* p. 340 (1910).

The eggs of the Baya or Common Indian Weaver-Finch are long ovals, pointed at the smaller end. They have a slight gloss and are plain white. They measure from .72 to .9 in length, and from .52 to .62 in breadth.

Genus **AMBLYOSPIZA**, *Sundev.*

Amblyospiza albifrons (*Vig.*).

(Plate XV. figs. 18 & 19.)

Amblyospiza albifrons, *Sharpe, Cat. Birds B. M.* xiii. p. 501 (1890); *Kuschel, J. f. O.* 1895, p. 336; *Stark, Faun. S. Afr., Birds*, i. p. 80 (1900); *Reich. Vög. Afr.* iii. p. 98 (1904); *Shelley, Birds Afr.* iv. p. 303 (1905); *Sparrow, J. S. Afr. Orn. U.* i. p. 10 (1905); *Sharpe, Hand-l.* v. p. 481 (1909); *Nehrke. Kat. Eiersamml.* p. 340 (1910).

Eggs of the Southern Grosbeak-Weaver are of an ordinary or rather long oval shape and without gloss. The ground varies from white to creamy-white or pinkish-white. Some eggs are rather heavily marked all over the shell with spots and dots of pinkish-brown or maroon and lilae-grey; in others the markings take the form of minute dots, which become rather dense towards the larger end where they form a sort of cap. Some again have but few markings, and these are almost entirely confined to the larger end, while others are sparingly marked with small reddish-brown spots scattered over the entire shell. They measure from .82 to .86 in length, and from .61 to .65 in breadth.

Amblyospiza unicolor (*Fischer & Reichenow*).

(Plate XV. fig. 16.)

Pyrenestes unicolor, *Fischer, J. f. O.* 1878, p. 283; 1880, p. 193.

Amblyospiza unicolor, *Sharpe, Cat. Birds B. M.* xiii. p. 503 (1890);
Kaschel, J. f. O. 1895, p. 336; *Reich. Vög. Afr.* iii. p. 99 (1904);
Shelley, Birds Afr. iv. p. 306 (1905); *Sharpe, Hand-l.* v. p. 481
 (1909); *Nehr. Kat. Eiersamml.* p. 340 (1910).

Eggs of the Black Grosbeak-Weaver resemble those of *A. albifrons*. Two are sparingly marked with reddish-brown on a pinkish-white ground; one is very handsomely marked, being heavily blotched round the larger end with purplish-red. They measure respectively: .83 by .59; .88 by .61; .95 by .63.

3. East Africa.

Crowley Bequest.

Amblyospiza melanonota (*Heugl.*).

Amblyospiza melanonota, *Sharpe, Cat. Birds B. M.* xiii. p. 504 (1890);
Reich. Vög. Afr. iii. p. 100 (1904); *Shelley, Birds Afr.* iv. p. 307
 (1905); *Sharpe, Hand-l.* v. p. 481 (1909); *Nehr. Kat. Eiersamml.*
 p. 340 (1910); *Ogilvie-Grant, Trans. Zool. Soc.* xix. p. 282, pl. xix.
 figs. 15 & 16 (1910).

Eggs of Heuglin's Grosbeak-Weaver resemble those of *A. albifrons*; one set of three eggs has the ground-colour pale pinkish-white, spotted, especially towards the larger end, with maroon-red; a second set of two eggs has the ground-colour pale reddish-white, marked all over with spots of light red. They measure from .85 to .95 in length, and from .58 to .6 in breadth.

Family ICTERIDÆ.

Genus **ZARHYNCHUS**, *Oberholser*.

Zarhynchus wagleri (Gray).

- Ocyalus wagleri*, *Scl. & Salv. P. Z. S.* 1879, p. 508, pl. xliii, fig. 3.
Eucorystes wagleri, *Scl. Cat. Birds B. M.* xi. p. 312 (1886); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 436 (1886); *Nehrkr. Kat. Eiersamml.* p. 98 (1899).
Zarhynchus wagleri, *Ridgw. Birds North & Middle Amer.* ii. p. 176 (1902).
Zarhynchus wagleri, *Sharpe, Hand-l.* v. p. 483 (1909); *Nehrkr. Kat. Eiersamml.* p. 340 (1910).

Eggs of Wagler's Hangnest vary much in shape, some being of a rather wide oval form, others of a much elongate and pointed oval shape; they exhibit only a trace of gloss. The ground is pale greenish-blue, spotted and blotched, chiefly at the broad end, with pale sepia-brown, dark chocolate-brown and lilac-grey. The markings of the last-named colour are few, small and inconspicuous; the other markings are large and frequently confluent. They vary in length from 1.2 to 1.5, and in breadth from .86 to .99.

Birds North & Middle Amer.* ii. p. 180 (1902).

An egg of the Montezuma Hangnest is of a long pointed oval form and devoid of gloss. The ground is pinkish-white, rather sparingly marked with short irregular streaks and a few blotches of dark chocolate-brown and underlying clouded markings of pale lilac-grey. It measures 1.6 by 1.05.

1. Costa Rica, March.

Mr. C. F. Underwood [C.].

Gymnostinops guatimozinus (*Bonap.*).

(Plate XVI. fig. 1.)

Ostinops guatimozinus, *Scl. & Salv. P. Z. S.* 1879, p. 508.*Gymnostinops guatimozinus*, *Scl. Cat. Birds B. M.* xi. p. 314 (1886); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 439 (1886); *Nehrk. Kat. Eiersamml.* p. 98 (1899), p. 340 (1910); *Ridgw. Birds North & Middle Amer.* ii. p. 182 (1902); *Sharpe, Hand-l.* v. p. 484 (1909).

Two eggs of the Colombian Hangnest are of a regular oval form, slightly glossy, rough in texture, and covered with small pores. They are pinkish-white, very sparingly blotched with chocolate-brown and lilac-grey. They measure respectively: 1.38 by .98; 1.33 by .98.

2. Remedios, Antioquia, U.S.
Colombia (*T. K. Salmon*).

Salvin-Godman Coll.

Genus **OSTINOPS**, *Cabanis*.**Ostinops decumanus** (*Pull.*).

(Plate XVI. figs. 2, 3.)

Icterus cristatus, *Thien. Fortpflanz. ges. Vög.* tab. xxxvii. fig. 7 (1845-54).*Ostinops cristatus*, *Wyatt, Ibis*, 1871, p. 328.

Ostinops deemanns, *Scl. & Salv. P. Z. S.* 1879, p. 508; *Scl. Cat. Birds B. M.* xi. p. 315 (1886); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 440 (1886); *Allen, Bull. Amer. Mus. N. H.* iii. p. 376 (1891); *Nehrk. Kat. Eiersamml.* p. 99 (1899), p. 340 (1910); *Euler, Rev. Mus. Paulista*, iv. p. 32 (1900); *Ihering, Rev. Mus. Paulista*, iv. p. 217 (1900); *Ridgw. Birds North & Middle Amer.* ii. p. 184 (1902); *Sharpe, Hand-l.* v. p. 485 (1909).

The eggs of the Crested Hangnest are of a regular oval shape, slightly glossy and of coarse texture. They appear to be very variable in colour. Two specimens have the ground white and two others have it pale greenish-blue, and they are both sparingly spotted and blotched with deep black and lilac. Two other examples are pale pinkish-white mottled and smeared with lilac-grey.* In addition, one is covered with a close tracery of fine purplish-brown lines, and the other is marked with a few blackish spots and blotches and some irregular lines of purplish-grey. They measure from 1.25 to 1.4 in length, and from .9 to 1 in breadth.

Ostinops salmoni, *Slater*.

Ostinops atrocaneus, *Scl. & Salv. P. Z. S.* 1879, p. 509, pl. xliii. figs. 1, 2.

Ostinops salmoni, *Scl. Cat. Birds B. M.* xi. p. 317 (1886); *Nehrk. Kat. Eiersamml.* p. 99 (1899), p. 341 (1910); *Sharpe, Hand-l.* v. p. 485 (1909).

The eggs of Salmon's Hangnest are of a narrow oval shape, without gloss and slightly coarse in texture. They are of two types. In the first they are pinkish-white, blotched and smeared with two shades of sepia-brown and with underlying lavender-grey. In the second, the eggs are salmon-pink, spotted and mottled with pale reddish-brown and lilac-grey, and marked, in addition, with a few lines and specks of deep purplish-brown. They measure from 1.37 to 1.5 in length, and from .94 to 1 in breadth.

Genus *CACICUS*, *Lacépède*.

Cacicus persicus (*Linn.*).

Cassicus persicus, *Scl. & Salv. P. Z. S.* 1873, p. 266; *Layard, Ibis*, 1873, p. 381; *Scl. Cat. Birds B. M.* xi. p. 321 (1886); *Allen, Bull. Amer.*

Mus. N. H. iii. p. 377 (1891); *Goeldi, Ibis*, 1897, p. 361; *Euler, Rev. Mus. Paulista*, iv. p. 33 (1900); *Ihering, Rev. Mus. Paulista*, iv. p. 219 (1900); *Goeldi, Bol. Mus. Paraense*, iii. p. 203 (1901).
Cacicus persicus, *Sharpe, Hand-l.* v. p. 486 (1909); *Nehrck. Kat. Eiersamml.* p. 341 (1910).

Two eggs of the Yellow Hangnest, also known as the "Japim," are of a somewhat pointed oval shape and without gloss. The ground is white, sparingly marked, chiefly towards the larger end, with spots and small blotches of deep chocolate-brown and lavender-grey. They measure respectively: 1.15 (about) by .74, and 1.07 by .72.

Paraense*, iii. p. 203 (1901); *Sharpe, Hand-l. v.* p. 488 (1909); *Nehr. Kat. Eiersamml.* p. 341 (1910).
Cassidix oryzivora violacea, *Ridgway Birds North & Middle Amer.* ii. p. 197 (1902).

Two eggs of the Ruffed Hangnest are of very different size and shape. Both are plain white, without gloss, and coarse in texture. One example is an elongate oval and measures 1.42 by .9; the other is a short, blunt oval, and measures 1.15 by .85.

Nehr Korn describes the eggs as being dull bluish with a few blackish-brown spots and hieroglyphics.

This bird, being parasitic in its nesting-habits, appears to lay eggs of varied colouring.

Colombia (*T. K. Salmon*).

Genus **DOLICHONYX**, *Swains*.

Dolichonyx oryzivorus (*Linn.*).

Dolichonyx oryzivora, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 149 (1874); *Coues, Key N. Amer. Birds*, p. 400 (1884); *Scl. Cat. Birds B. M.* xi. p. 331 (1886); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 448 (1886); *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 429, pl. vi. figs. 1, 2 (1895); *Nehr. Kat. Eiersamml.* p. 99 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 219 (1900); *Ridgway, B. North & Middle Amer.* ii. p. 370 (1902); *Sharpe, Hand-l.* v. p. 489 (1909); *Nehr. Kat. Eiersamml.* p. 341 (1910).

The eggs of the Bobolink, or American Rice-bird, are of a regular oval shape, smooth and glossy. They are pinkish-white or grey, smeared, blotched and marked in various ways with rich brown, pale purplish- or reddish-brown, and lavender-grey. The markings, though often dense all over the shell, are more so at the broad end than elsewhere. They measure from .82 to .92 in length, and from .6 to .66 in breadth.

Genus **TANGARIUS**, *Lesson*.

Tangarius involucratus, *Less*.

Molothrus æneus, *Owen (new Wagl.), Ibis*, 1861, p. 61; *Scl. Cat. Birds B. M.* xi. p. 334 (1886) [part.]; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 451 (1887); *Nehr. Kat. Eiersamml.* p. 100 (1899).
Tangarius involucratus, *Sharpe, Hand-l.* v. p. 489 (1909); *Nehr. Kat. Eiersamml.* p. 342 (1910).

The eggs attributed to the Red-eyed Cow-bird by Mr. R. Owen are broad ovals, very glossy, and of a very pale blue colour. There are a few small spots on some of the specimens, but they are

probably stains acquired in the course of incubation. Seven examples measure from .9 to 1.02 in length, and from .7 to .76 in breadth.

These eggs agree with the description given by Nehrkorn.

7. S. Geronimo, Guatemala, 2nd June Salvin-Godman Coll.
(R. Owen).

Tangarius æneus (Wagl.).

(Plate XVI, fig. 7.)

Molothrus æneus, Lawr. Mem. Bost. Soc. N. H. ii. p. 281 (1874); *Scl. Cat. B. Brit. Mus.* xi. p. 335 [part.] (1885).

The eggs of the Argentine Cow-bird are of an extremely short, broad oval form, many specimens being spheroidal, and they possess a considerable amount of gloss. They are very variable in colour. Many are plain white; others are white marked with specks of grey or faint lavender; others are white or cream-colour, densely speckled with chestnut and lavender; and others again are not only speckled as in these last, but are also heavily blotched, especially at the broad end, with deep chestnut-red and purplish-grey. They measure from .8 to 1 in length, and from .7 to .8 in breadth.

Molothrus rufo-axillaris, Cassin.

(Plate XVI. figs. 11 & 13.)

Molothrus rufo-axillaris, *Hudson, P. Z. S.* 1874, p. 161; *Scl. Cat. Birds B. M.* xi. p. 338 (1886); *Scl. & Huds. Argent. Orn.* i. p. 86 (1888); *Holland, Ibis*, 1892, p. 198; *Nehrk. Kat. Eiersamml.* p. 100 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 220 (1900); *Sharpe, Hand-l. v.* p. 491 (1909); *Nehrk. Kat. Eiersamml.* p. 342 (1910); *C. Grant, Ibis*, 1911, p. 104.

Eggs attributed to the Screaming Cow-bird by Mr. Hudson are elliptical in shape, the two ends being, however, rather pointed, and moderately glossy. They are grey, thickly and evenly speckled and mottled with pale purplish-brown and pale lavender. Three examples measure respectively: .9 by .68; .9 by .69; .93 by .69.

Eggs taken by Mr. Holland are of a regular oval shape and moderately glossy. They are greyish-white, thickly freckled with dark brown and underlying grey. They measure respectively: .95 by .7; .97 by .7.

Four of the eggs taken by Miss Runnacles are of a redder type, the ground being pinkish-white, and the numerous spots and freckles all over the shell reddish-brown and lilac-grey. They measure: .93 by .74; .9 by .7; .85 by .68 (two).

Agelæus phœniceus phœniceus, *Ridgw. Birds North & Middle Amer.* ii. p. 330 (1902).

The eggs of the Red-winged Blackbird, or Red-shouldered Starling, are of an oval shape, and moderately glossy. They are pale bluish-green, often clouded at the ends with greyish-pink or pale brown and sparingly marked, chiefly at the broad end, with spots, streaks, and lines resembling those on the eggs of some of the Buntings. These markings are black, brown, deep purplish-red, and pinkish-brown, many of them being blurred at the margins and running into the surrounding ground-colour. Numerous eggs measure from .9 to 1.1 in length, and from .67 to .75 in breadth.

Agelæus thilius (Mol.).

(Plate XVI. figs. 16 & 17.)

Icterus thilius, *Thien. Fortpflanz. ges. Vög.* tab. xxxvii. fig. 9 (1845-54).
Agelæus thilius, *Scl. Cat. Birds B. M.* xi. p. 343 (1886); *Scl. & Huds. Arg. Orn.* i. p. 97 (1888); *James, New List Chilean Birds*, p. 3 (1892); *Holland, Ibis*, 1892, p. 198; *Nehr. Kat. Eiersamml.* p. 100 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 220 (1900); *Sharpe, Hand-l. v.* p. 493 (1909); *Nehr. Kat. Eiersamml.* p. 343 (1910); *C. Grant, Ibis*, 1911, p. 105.

The eggs of the Yellow-shouldered Marsh-bird are of a narrow oval shape and moderately glossy. They vary in colour from pale greenish-blue to greyish-pink, spotted and blotched, chiefly at the broad end, with black, deep reddish-brown or dark purplish-brown. Some of the markings take the form of short, broad lines, and these, when they occur, generally form an irregular wreath or zone round the broad end. At this part also there are often some smears and spots of pale lavender. Specimens measure from .8 to 1 in length, and from .6 to .7 in breadth.

Agelæus flavus (Gmel.).

(Plate XVII. figs. 1 & 2.)

Icterus flavus, *Thien. Fortpflanz. ges. Vög.* tab. xxxvii. fig. 16 (1845-54).
Agelæus flavus, *Scl. Cat. Birds B. M.* xi. p. 346 (1886); *Scl. & Huds. Arg. Orn.* i. p. 98 (1888); *Holland, Ibis*, 1896, p. 315; *Nehr. Kat. Eiersamml.* p. 100 (1899); *Ihering, Rev. Mus. Paulista*, iv. p. 221 (1900); *Sharpe, Hand-l. v.* p. 494 (1909); *Nehr. Kat. Eiersamml.* p. 343 (1910).
Xanthostomus flavus, *Gibson, Ibis*, 1885, p. 278.

The eggs of the Yellow-headed Marsh-bird are of a rather broad oval form and moderately glossy. They are very pale greenish-blue, speckled and blotched with pale chestnut-brown and lilac-

grey, or with dark purplish-brown and lilac. There are no traces of the lines which characterize the eggs of *A. phoeniceus* and many of those of *A. thilius*. Seven specimens measure from .88 to .92 in length, and from .66 to .7 in breadth.

Agelæus ruficapillus, Vieill.

(Plate XVII. fig. 7.)

Agelæus ruficapillus, *Scl. Cat. Birds B. M.* xi. p. 347 (1886); *Scl. & Huds. Arg. Orn.* i. p. 99 (1888); *Ihering, Rev. Mus. Paulista*, iv. p. 221 (1900); *Sharpe, Hand-l.* v. p. 494 (1909); *Nehrke, Kat. Eiersamml.* p. 343 (1910); *C. Grant, Ibis*, 1911, p. 105.

Eggs of the Red-headed Marsh-bird are of a rather pointed oval shape, and very slightly glossy. The ground is pale blue, with twisted lines or a number of spots and various irregularly shaped small blotches of purplish-black, mostly confined to the larger end. They vary from 1.0 to 1.05 in length, and from .7 to .8 in width.

Genus **LEISTES**, Vigors.

Leistes superciliaris (Bonap.).

(Plate XVII. figs. 4 & 5.)

Leistes superciliaris, *Scl. Cat. Birds B. M.* xi. p. 349 (1886); *Scl. & Huds. Arg. Orn.* i. p. 100 (1888); *Holland, Ibis*, 1892, p. 198; *Ihering, Rev. Mus. Paulista*, iv. p. 221 (1900); *Sharpe, Hand-l.* v. p. 495 (1909); *Nehrke, Kat. Eiersamml.* p. 343 (1910).

The eggs of the Red-breasted Marsh-bird are of a rather broad oval shape and moderately glossy. They are greyish-white or very pale green, profusely speckled and mottled with reddish-brown and lavender-grey. In some instances the markings form a dense cap over the broad end. Eleven examples measure from .87 to .96 in length, and from .62 to .73 in breadth.

Genus **XANTHOCEPHALUS**, Bonap.**Xanthocephalus xanthocephalus** (Bonap.).

- Xanthocephalus icterocephalus*, *Baird, Brewer & Ridgw. (nec Linn.) N. Amer. Birds*, ii. p. 167 (1874).
Xanthocephalus longipes, *Scl. Cat. Birds B. M.* xi. p. 350 (1886); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 455 (1887); *Nehrsk. Kat. Eiersamml.* p. 100 (1899).
Xanthocephalus xanthocephalus, *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 446, pl. vi. figs. 10-12 (1895); *Ridgw. Birds North & Middle Amer.* ii. p. 347 (1902); *Sharpe, Hand-l.* v. p. 495 (1909); *Nehrsk. Kat. Eiersamml.* p. 343 (1910).

The eggs of the Yellow-headed Troupial are mostly of an elongate oval shape and fairly glossy. They vary from greyish-white to greenish-white, and are densely speckled and mottled with various shades of brown, grey, and pale rufous. The markings are most dense on the broad end of the egg, but seldom form a conspicuous cap. Numerous specimens measure from 1 to 1.2 in length, and from .7 to .78 in breadth.

Genus **AMBLYRHAMPHUS**, Leach.**Amblyrhamphus holosericeus** (Scop.).

- Amblyrhamphus ruber*, *Burm. La Plata Reise*, ii. p. 491 (1861).
Amblyrhamphus holosericeus, *Scl. Cat. Birds B. M.* xi. p. 351 (1886); *Scl. & Huds. Arg. Orn.* i. p. 101 (1888); *Ihering, Rev. Mus. Paulista*, iv. p. 221 (1900); *Sharpe, Hand-l.* v. p. 495 (1909); *Nehrsk. Kat. Eiersamml.* p. 343 (1910); *C. Grant, Ibis*, 1911, p. 106.

Eggs of the Scarlet-headed Marsh-bird are of an ordinary oval shape and glossy. They closely resemble eggs of the Common Song-Thrush, the ground being pale blue, sparingly marked with a few small spots and irregular marks of dark purplish-black and purplish-grey. They measure respectively: 1.01 by .73; 1 by .73; 1 by .72; .98 by .74. These eggs agree with the description given by Hudson, but not with that given by Burmeister. Nehrkorn describes the ground-colour as yellowish-white.

Genus PSEUDOLEISTES, *Scoter*.*Pseudoleistes guirahuro* (*Vieill.*).

(Plate XVII. figs. 6 & 9.)

Pseudoleistes guirahuro, *Sci. Cut. Birds B. M.* xi. p. 352 (1886); *Euler, Rev. Mus. Paulista*, iv. p. 34 (1900); *Ihering, t. c.* p. 221 (1900); *Sharpe, Hand-l.* v. p. 495 (1909); *Nehrke, Kat. Eiersamml.* p. 344 (1910); *Chubb, Ibis*, 1910, p. 642.

Eggs of the Yellow-backed Marsh-bird are of a broad oval shape, sometimes almost spheroidal, and distinctly glossy. The ground is pinkish-white mottled with pinkish and lilac-grey; towards the larger end the shell is spotted and blotched with deep chocolate and brown-pink or maroon, some of the dark chocolate markings taking the form of irregular lines and sometimes partially bordering the brown-pink blotches. They vary from .9 to 1.08 in length, and from .7 to .8 in breadth.

Pseudoleistes virescens (*Vieill.*).

Pseudoleistes virescens, *Sci. Cut. Birds B. M.* xi. p. 352 (1886); *Sci. & Huds. Arg. Orn.* i. p. 102 (1888); *Holland, Ibis*, 1892, p. 199; *Nehrke, Kat. Eiersamml.* p. 101 (1899), p. 344 (1910); *Euler, Rev. Mus. Paulista*, iv. p. 34 (1900); *Ihering, t. c.* p. 221 (1900); *Sharpe, Hand-l.* v. p. 496 (1909); *C. Grant, Ibis*, 1911, p. 107.

The eggs of the Yellow-breasted Marsh-bird closely resemble eggs of *P. guirahuro*, and are of a broad oval shape and glossy. They are white or pinkish-white, densely speckled and blotched with rich reddish-brown, brown-lake or maroon, and lavender-grey. The markings are more or less confluent at the broad end of the egg, and form an irregular zone or imperfect cap. Examples measure from .94 to 1.11 in length, and from .72 to .8 in breadth.

Genus **CURÆUS**, *Sclater*.

Curæus aterrimus (*Kittl.*).

(Plate XVII. fig. 8.)

Curæus aterrimus, *Scl. Cat. Birds B. M.* xi. p. 354 (1886); *James, New List Chilian Birds*, p. 3 (1892); *Lane, Ibis*, 1897, p. 27; *Nehrk. Kat. Eiersamml.* p. 101 (1899), p. 344 (1910); *Sharpe, Hand-l.* v. p. 496 (1909).

The eggs of the Chilian Starling are of an oval shape, sometimes broad, sometimes long and narrow, and moderately glossy. They are of a bluish-white or very pale blue colour, frequently plain, sometimes marked with a few black blotches, spots, lines, and hieroglyphic-like figures at the broad end. They measure from 1·05 to 1·35 in length, and from ·77 to ·86 in breadth.

Genus **TRUPIALIS**, *Bonap.*

Trupialis militaris (*Linn.*).

(Plate XVII. figs. 11 & 12.)

Icterus militaris, *Thien. Fortpflanz. ges. Vög.* tab. xxxvii. fig. 13, *a, b* (1845-54).

Sturnella militaris, *Abbott, Ibis*, 1861, p. 153.

Trupialis militaris, *Scl. Cat. Birds B. M.* xi. p. 356 (1886); *Scl. & Huds. Arg. Orn.* i. p. 104 (1888); *James, New List Chilian Birds*, p. 3 (1892); *Holland, Ibis*, 1897, p. 286; *Nehrk. Kat. Eiersamml.* p. 101 (1899), p. 344 (1910); *Crawshaw, Birds of Tierra del Fuego*, p. 57 (1907); *Sharpe, Hand-l.* v. p. 496 (1909); *C. Grant, Ibis*, 1911, p. 108.

The eggs of the Patagonian Marsh-Starling are of a regular or somewhat narrow oval shape, and moderately glossy. They are pinkish-white, marked, more thickly at the broad end than elsewhere, with smears, blotches, spots, and occasional lines of

chocolate-brown, purplish-brown, brownish-pink, and lilac. They measure from 1·03 to 1·28 in length, and from ·7 to ·85 in breadth.

Trupialis bellicosa (*De Fil.*).

(Plate XVII. fig. 3.)

Sturnella bellicosa, *Scl. & Salv. P. Z. S.* 1868, p. 569.

Trupialis bellicosa, *Scl. Cat. Birds B. M.* xi. p. 357 (1886); *Nehrk. Kat. Eiersamml.* p. 101 (1899), p. 344 (1910); *Sharpe, Hand-l.* v. p. 496 (1909).

According to Nehrkorn eggs of the Allied Marsh-Starling resemble those of *T. militaris*; but examples in the Collection do not bear out this statement. They are of an elliptical form, somewhat pointed at both ends, and slightly glossy. The ground is white, sprinkled with minute dots of chestnut and lavender, densely at the broad end, sparingly elsewhere. Four eggs measure respectively: 1·18 by ·8; 1·16 by ·87; 1·16 by ·78; 1·11 by ·79.

Trupialis defilippii, *Bonap.*

(Plate XVII. figs. 10 & 13.)

Trupialis defilippii, *Scl. Cat. Birds B. M.* xi. p. 357 (1886); *Scl. & Huds. Arg. Orn.* i. p. 105 (1888); *Holland, Ibis*, 1895, p. 215; *Nehrk. Kat. Eiersamml.* p. 101 (1899), p. 344 (1910); *Ihering, Rev. Mus. Paulista*, iv. p. 221 (1900); *Sharpe, Hand-l.* v. p. 496 (1909).

The eggs of De Filippi's Marsh-Starling closely resemble those of *T. militaris*, but are somewhat smaller. Two specimens, however, differ remarkably from the others in being of a narrow elongate oval form, and in being cream-colour, densely mottled all over with pale chestnut-brown. Examples measure from .92 to 1.12 in length, and from .68 to .78 in breadth.

Genus STURNELLA, Vieill.

Sturnella magna (Linn.).

Sturnella magna, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 174 (1874); *Sel. Cat. Birds B. M.* xi. p. 358 (1886) [part.]; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 456 (1887) [part.]; *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 458, pl. vi. figs. 20, 21 (1895); *Nehr. Kat. Eiersamml.* p. 101 (1899), p. 344 (1910); *Sharpe, Hand-l.* v. p. 497 (1909).

Sturnella magna magna, *Ridgw. Birds North & Middle Amer.* ii. p. 357 (1902).

The eggs of the Meadow-Lark are generally of a broad oval form and moderately glossy. They are white, speckled, spotted, and blotched in some cases with pale chestnut-brown or pinkish-brown, in others with dark chocolate-brown, and again in others with a combination of the two colours. All have, moreover, numerous underlying markings of pale lavender-grey. The markings, especially the larger ones, are generally densest on the broad end of the egg, but they seldom form a well-defined zone or cap. Some specimens are marked entirely with small spots, but the majority have both spots and blotches. They measure from .91 to 1.2 in length, and from .75 to .9 in breadth.

The eggs of the Baltimore Hangnest are of a narrow and sharply-pointed oval shape and moderately glossy. They are greyish-white, marked with spots, blotches and lines, both fine and thick, of black, brown or chocolate-brown and underlying lavender. The lines at the broad end of the egg in one specimen are complex and tangled, forming an irregular cap. The eggs vary from .86 to 1 in length, and from .6 to .65 in breadth.

Icterus bullocki (Swains.).

Icterus bullocki, Lord, *Proc. R. A. Inst. Woolwich*, iv. p. 339 (1865); Baird, Breicer & Ridgw. *N. Amer. Birds*, ii. p. 199 (1874); Sennett, *Bull. U.S. Geol. Geogr. Surv. Terr.* iv. p. 25 (1878); *Scl. Cat. Birds B. M.* xi. p. 365 (1886); Salv. & Godm. *Biol. Centr.-Amer., Aves*, i. p. 462 (1887); Bendire, *Life-Hist. N. Amer. Birds*, ii. p. 486, pl. vii. figs. 10-13 (1895); Nehrck. *Kat. Eiersamml.* p. 101 (1899), p. 344 (1910); *Ridgw. Birds North & Middle Amer.* ii. p. 314 (1902); Sharpe, *Hand-l.* v. p. 498 (1909).

The eggs of Bullock's Hangnest are very similar to those of *I. baltimore* already described. In three specimens in the series, the system of lines at the broad end of the egg is very intricate, and in two others the lines are fewer or altogether absent at that part. Specimens measure from .81 to 1 in length, and from .6 to .67 in breadth.

Icterus spurius affinis, Sennett, *Bull. U.S. Geol. Geogr. Surv. Terr.* v. p. 397 (1879).

The eggs of the Orchard Hangnest are of a pointed oval shape and somewhat glossy. They are greyish-white or faint bluish-white, marked, chiefly on the broader half of the egg, with spots, small blotches and hieroglyphic-like streaks of black, purplish-brown and lavender. The eggs of this species lack entirely the long and intricate tracery of lines to be found on the eggs of *I. baltimore* and *I. bullocki*. The few lines present are all comparatively short. Specimens measure from .8 to .9 in length, and from .58 to .6 in breadth.

Icterus cayanensis (Linn.).

(Plate XVII. fig. 14.)

Icterus cajennensis, *Thien. Fortpflanz. ges. Vög.* tab. xxvii. fig. 6 (1845-54).

Icterus cayanensis, *Scl. Cat. Birds B. M.* xi. p. 369 (1886); *Nehr. Kat. Eiersamml.* p. 102 (1899), p. 345 (1910); *Ihering, Rev. Mus. Paulista*, iv. p. 222 (1900); *Sharpe, Hand-l.* v. p. 499 (1909).

Four eggs believed to be those of the Yellow-winged Hangnest are of a broad and blunt oval shape, and glossy. They are stone-colour or pinkish-grey, marked, almost entirely in the form of a zone or cap at the broad end, with spots, blotches and short lines of black, chocolate-brown and lavender. They vary from .88 to 1 in length, and from .64 to .71 in breadth.

Nehr Korn describes eggs of this species as being blue-grey spotted with violet and black over the entire shell.

Icterus wagleri, *Sclater*.

(Plate XVII. fig. 17.)

Icterus wagleri, *Salv. Ibis*, 1859, p. 468; *Scl. Cat. Birds B. M.* xi. p. 372 (1886); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 468

(1887); *Nehrk. Kat. Eiersamml.* p. 102 (1899), p. 345 (1910); *Ridgw. Birds North & Middle Amer.* ii. p. 267 (1902); *Sharpe, Hand-l.* v. p. 500 (1909).

The eggs of Wagler's Hangnest are nearly elliptical in shape, and somewhat glossy. They are white, spotted and blotched, almost entirely at the broader end, with deep umber- or chocolate-brown and purplish-grey. Three examples measure respectively: 1.01 by .7; 1 by .7; .94 by .7.

Nehrkorn says that eggs of this species resemble those of *I. baltimore*, which are of an entirely different character to those described above. It is not unlikely that the eggs referred by him to *I. wagleri* are really those of *I. prothemelas*.

3. Volcan de Fuego, Guatemala, 24th July (O. Salvin). Salvin-Godman Coll.

Icterus prothemelas (Strickl.).

Icterus prothemelas, *Sci. Cat. Birds B. M.* xi. p. 373 (1886); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 466 (1887); *Ridgw. Birds North & Middle Amer.* ii. p. 269 (1902); *Sharpe, Hand-l.* v. p. 500 (1909); *Nehrk. Kat. Eiersamml.* p. 345 (1910).

Eggs of Lesson's Hangnest resemble those of *I. baltimore*.

Icterus parisorum, Bonap.

Icterus parisorum, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 188 (1874); *Sci. Cat. Birds B. M.* xi. p. 374 (1886); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 463 (1887); *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 471, pl. vi. figs. 28, 29 (1895); *Nehrk. Kat. Eiersamml.* p. 102 (1899), p. 345 (1910); *Ridgw. Birds North & Middle Amer.* ii. p. 308 (1902); *Sharpe, Hand-l.* v. p. 501 (1909).

An egg of Scott's Hangnest is of a pointed oval shape and without gloss. It is white, sparingly spotted with black and lavender, and measures .9 by .67.

1. North America (*Smiths. Inst.*). Salvin-Godman Coll.

Icterus melanocephalus (Wagl.).

Icterus melanocephalus, *Sci. Cat. Birds B. M.* xi. p. 375 (1886) [part.]; *Sharpe, Hand-l.* v. p. 501 (1909); *Nehrk. Kat. Eiersamml.* p. 345 (1910).

Icterus melanocephalus melanocephalus, *Ridgw. Birds North & Middle Amer.* ii. p. 280 (1902).

Two eggs believed to be those of the Black-headed Hangnest resemble eggs of *I. spurius*. They measure respectively: .75 by .55; .73 by .53.

2. Mexico (*H. Buckley: Tristram* Crowley Bequest.
Coll.).

Icterus auduboni, Giraud.

- Icterus melanocephalus, var. auduboni, Baird, Brewer & Ridgw. N. Amer. Birds, ii. p. 186 (1874).*
Icterus melanocephalus, Sci. Cat. Birds B. M. xi. p. 375 (1886) [part.]; Salv. & Godm. Biol. Centr.-Amer., Aves, i. p. 468 (1887) [part.].
Icterus auduboni, Sennett, Bull. U.S. Geol. Geogr. Surv. Terr. v. p. 399 (1879); Bendire, Life-Hist. N. Amer. Birds, ii. p. 469, pl. vi. figs. 25-27 (1895); Sharpe, Hand-l. v. p. 501 (1909); Nehrke. Kat. Eiersamml. p. 345 (1910).
Icterus melanocephalus auduboni, Ridgw. Birds North & Middle Amer. ii. p. 282 (1902).

An egg of Audubon's Hangnest is of a regular oval shape and slightly glossy. It is white, somewhat thickly speckled all over with pale chestnut-brown and lavender. It measures .9 by .67.

1. North America (*Smiths. Inst.*) Salvin-Godman Coll.

Icterus cucullatus, Swains.

- Icterus cucullatus, Baird, Brewer & Ridgw. N. Amer. Birds, ii. p. 193 (1874) [part.]; Sci. Cat. Birds B. M. xi. p. 376 (1886) [part.]; Salv. & Godm. Biol. Centr.-Amer., Aves, i. p. 471 (1887) [part.]; Sharpe, Hand-l. v. p. 501 (1909); Nehrke. Kat. Eiersamml. p. 345 (1910).*
Icterus cucullatus cucullatus, Ridgw. Birds North & Middle Amer. ii. p. 287 (1902).

Two sets of eggs of the Hooded Hangnest are of a pointed oval form and almost devoid of gloss. They are of two types: two examples are plain white, while the remainder have the ground-colour pinkish-white or greyish-white, marked with twisted lines and blotches of deep chocolate-brown and lilac-grey, much as in *I. baltimore* and *I. bullocki*. They vary from .94 to 1.05 in length, and from .66 to .68 in breadth.

Genus **EUPHAGUS**, *Cassin*.**Euphagus carolinus** (*P. L. S. Müll.*).

Scolecophagus ferrugineus, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 203 (1874); *Banks, Auk*, ii. p. 106 (1885); *Scl. Cat. Birds B. M.* xi. p. 390 (1886); *Nehr. Kat. Eiersamml.* p. 103 (1899).

Scolecophagus carolinus, *MacFarlane, Proc. U. S. Nat. Mus.* xiv. p. 440 (1891); *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 489, pl. vii. figs. 14-16 (1895); *Ridgw. Birds North & Middle Amer.* ii. p. 246 (1902).

Euphagus carolinus, *Sharpe, Hand-l.* v. p. 506 (1909); *Nehr. Kat. Eiersamml.* p. 346 (1910).

The eggs of the Rusty Grackle are of two types. In one, they are of an ordinary, but somewhat pointed, oval shape, moderately glossy, and pale bluish-green, blotched, smeared and mottled with pale brown or pinkish-brown and lavender-grey. In the second type, the eggs are of a blunt oval shape, almost elliptical, and rather highly glossy. They are greenish-grey, very densely mottled all over with dark brown and dull lavender, little of the ground being visible. Eight examples measure from 1 to 1.1 in length, and from .72 to .77 in breadth.

Euphagus cyanocephalus (Wagl.).

Scolecophagus cyanocephalus, *Blakiston*, *Ibis*, 1863, p. 82; *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 206 (1874); *Henshaw, Rep. Orn. Wheeler's Surv.* 1874, p. 82; *Coues, Birds N.-West*, p. 199 (1874); *Scl. Cat. Birds B. M.* xi. p. 390 (1886); *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 493, pl. vii, figs. 17-20 (1895); *Nehr. Kat. Eiersamml.* p. 103 (1899); *Ridgw. Birds North & Middle Amer.* ii. p. 248 (1902).

Euphagus cyanocephalus, *Sharpe, Hand-l.* v. p. 506 (1909); *Nehr. Kat. Eiersamml.* p. 346 (1910).

The eggs of Brewer's Grackle are of a broad oval form and glossy. They are pale greenish-blue or greenish-grey, marbled, blotched and clouded with several shades of brown and rufous, and also marked with spots, small blotches and short lines of deep chocolate or purplish-brown. The ground-colour is smeared in places with lilac or lavender. In one set of four eggs from California the ground in two is pale blue, one being unmarked, while the other one has only a few short black hair-lines and small blotches of purplish-black; the remaining two eggs are pale greyish-blue, somewhat smeared with brownish and with a few blotches or twisted lines as in eggs of *Quiscalus quisqualis* (see p. 397). Examples measure from .95 to 1.05 in length, and from .67 to .8 in breadth.

Genus QUISCALUS, Vieill.

Quiscalus quiscalus (Linn.).

Icterus quiscalus, *Thien. Fortplanz. ges. Vög.* tab. xxxvii. fig. 17, *a, b, c* (1845-54).

Quiscalus purpureus, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 214 (1874); *Coues, Birds N.-West*, p. 203 (1874).

Quiscalus versicolor, *Sci. Cat. Birds B. M.* xi. p. 394 (1886); *Nehrk. Kat. Eiersamml.* p. 103 (1899).

Quiscalus quiscula, *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 497, pl. vii. figs. 21-23 (1895).

Quiscalus quiscula quiscula, *Ridgw. Birds North & Middle Amer.* ii. p. 215 (1902).

Quiscalus quiscalus, *Sharpe, Hand-l.* v. p. 507 (1909); *Nehrk. Kat. Eiersamml.* p. 346 (1910).

The eggs of the Purple Grackle, or Changeable Troupial, are mostly of a regular oval shape and moderately glossy. The ground-colour is of some shade of green, varying from greenish-white and greyish-green to pale greenish-blue. The markings are coarse and consist of blotches and thick twisted lines of black and deep purplish-brown. Most specimens are also marked with smears and clouds of various shades of brown, chiefly pale, and some spots and blotches of underlying lavender. A few examples are mottled all over with pale reddish-brown to such an extent that little of the ground-colour is left visible. On these, the dark blotches and lines, so characteristic of most of the eggs of this species, are entirely absent. They measure from 1.1 to 1.3 in length, and from .8 to .9 in breadth.

Genus **MEGAQUISCALUS**, *Cassin*.**Megaquiscalus major** (*Vieill.*).

- Quiscalus major*, *Baird, Brewer & Ridgw. N. Amer. Birds*, ii. p. 222 (1874); *Sci. Cat. Birds B. M.* xi. p. 395 (1886); *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 506, pl. vii, figs. 30, 31 (1895); *Nehrck. Kat. Eiersamml.* p. 103 (1899).
- Megaquiscalus major*, *Sharpe, Hand-l.* v. p. 508 (1909); *Nehrck. Kat. Eiersamml.* p. 347 (1910).
- Megaquiscalus major major*, *Ridgw. Birds North & Middle Amer.* ii. p. 236 (1902).

The eggs of the Boat-tailed Grackle are of an ordinary oval shape and fairly glossy. They are of a pinkish stone-colour, marked with some blotches and numerous long straggling lines of black or deep purplish-brown. Some of these markings are blurred at the edge and run into the surrounding ground-colour. A few examples exhibit traces of underlying lavender spots. Eggs measure from 1.1 to 1.3 in length, and from .82 to .9 in breadth.

Eggs of the Grenada Grackle resemble those of *Megaquiscalus*

major but are much smaller. They vary from .99 to 1.14 in length, and from .73 to .79 in breadth.

3. Soubise, Grenada, 6th June (*J. G. Wells*). Crowley Bequest.
3. Grand Brasland, Grenada, 16th April (*J. G. W.*) Crowley Bequest.

Genus **HYPOPYRRHUS**, *Bonap.*

Hypopyrrhus pyrypogaster (*De Tarr.*).

Hypopyrrhus pyrrhogaster, *Scl. & Salv. P. Z. S.* 1879, p. 510, pl. xliii. fig. 4.

Hypopyrrhus pyrypogaster, *Scl. Cat. Birds B. M.* xi. p. 403 (1886); *Nehr. Kat. Eiersamml.* p. 104 (1899); *Sharpe, Hand-l.* v. p. 511 (1909); *Nehr. Kat. Eiersamml.* p. 347 (1910).

Three eggs of the Red-bellied Grackle are of a regular oval shape and glossy. They are pale greenish-blue, spotted and blotched at one end with deep purplish-brown and pale lavender. They measure respectively: 1.2 by .8; 1.21 by .8; 1.15 by .8.

2. Santa Elena, Antioquia, U.S. Salvin-Godman Coll.
Colombia (*T. K. Salmon*).
1. U. S. Colombia. Crowley Bequest.

Genus **GNORIMOPSAR**, *Richmond.*

[*Richmond, Pr. U.S. Nat. Mus.* xxxv. p. 584 (1908).]

Gnorimopsar chopi (*Vieill.*).

Psarocolius unicolor, *Burm. Syst. Ueber.* iii. p. 281 (1856).

Aphobus chopi, *Scl. Cat. Birds B. M.* xi. p. 405 (1886); *Scl. & Huds. Argent. Orn.* i. p. 108 (1888); *Dalgleish, Pr. R. Phys. Soc. Edinb.* x. p. 78 (1889); *Euler, Rev. Mus. Paulista*, iv. p. 34 (1900); *Ihering, t. c.* p. 222 (1900).

Aptus chopi, *Sharpe, Hand-l.* v. p. 511 (1909).

Gnorimopsar (Aphobus) chopi, *Nehr. Kat. Eiersamml.* p. 347 (1910).

Two eggs of the Chopi Boat-tail are of a somewhat pointed oval shape and glossy. They are pure white, and measure respectively 1.2 by .83, and 1.15 by .82.

Azara and Hudson say that the eggs of this species are pure white; and Dalgleish that they are pale blue, finely streaked with hair-like markings and with a few spots of very dark purple, chiefly round the larger end; while Nehr Korn describes them as sky-blue with deep black vermiform lines and hieroglyphics round the broad end. They seem to vary like the eggs of *Icterus cucullatus*.

2. Argentine Republic. Crowley Bequest.

Family STURNIDÆ.

Genus STURNUS, Linn.

Sturnus vulgaris, Linn.

Sturnus vulgaris, Thien. *Fortpflanz. ges. Vög.* tab. xxxviii. fig. 1, *a, b* (1845-54); Hewitson, *Eggs of Brit. Birds*, i. p. 216, pl. lv. fig. 1 (1856); Dresser, *Birds Eur.* iv. p. 405 (1874); Seebohm, *Brit. Birds*, ii. p. 12, pl. 11 (1884); Sharpe, *Cat. Birds B. M.* xiii. p. 27 (1890); Seebohm, *Eggs of Brit. Birds*, p. 230, pl. 54. fig. 13 (1896); Dresser, *Man. Pal. Birds*, i. p. 399 (1902); Rey, *Eier Vög. Mitteleurop.* i. p. 349 (1905); Jourd. *Eggs Europ. Birds*, i. p. 34 (1906); Dresser, *Eggs Birds Europe*, p. 340, pl. xxiii. figs. 1 & 2 (1908); Sharpe, *Hand-l.* v. p. 512 (1909); Nehrk. *Kat. Eiersamml.* p. 348 (1910).

Sturnus varius, Baedeker. *Eier Eur. Vög.* tab. 50. fig. 12 (1855-63).

Sturnus vulgaris vulgaris, Hartert, *Vög. pal. Faun.* i. p. 41 (1910).

The eggs of the Common Starling are mostly of an ordinary oval shape and highly glossy. They vary in colour from bluish-white to a pale greenish-blue. They measure from 1·08 to 1·3 in length, and from ·8 to ·9 in breadth.

Spodiopsar burmanicus (*Jerd.*).

Sturnia burmannica, *Jerd. Ibis*, 1862, p. 21.

Graculipica burmanica, *Oates, Fauna Brit. Ind., Birds*, i. p. 535 (1889); *Baker, Ibis*, 1906, p. 268.

Poliopsar burmanicus, *Sharpe, Cat. Birds B. M.* xiii. p. 45 (1890).

Spodiopsar burmanicus, *Sharpe, Hand-l.* v. p. 515 (1909); *Nehrke, Kat. Eiersamml.* p. 348 (1910).

Three eggs of Jerdon's Myna are like those of *S. cineraceus*. They measure respectively: 1.05 by .76; 1.05 by .76; and 1.01 by .76.

3. Myingyan, Upper Burma, 12th May. C. Hopwood, Esq. [P.].

Spodiopsar andamanensis (*Beavan*).

Sturnia andamanensis, *Oates, Fauna Brit. Ind., Birds*, i. p. 529 (1889); *Osmaston, J. Bomb. N. H. Soc.* xvii. p. 158 (1906).

Poliopsar andamanensis, *Sharpe, Cat. Birds B. M.* xiii. p. 47 (1890).

Spodiopsar andamanensis, *Sharpe, Hand-l.* v. p. 516 (1909).

Eggs of the Andaman Myna are of a bright Cambridge-blue. They vary from .98 to 1.05 in length, and from .73 to .75 in breadth.

3. Port Blair, S. Andamans, 5th May. B. B. Osmaston, Esq. [C.].

4. Port Blair, 21st May. B. B. Osmaston, Esq. [C.].

Spodiopsar malabaricus (*Gmel.*).

Sturnia malabarica, *Oates, Fauna Brit. Ind., Birds*, i. p. 527 (1889); *id., ed. Hume, Nests & Eggs Ind. Birds*, i. p. 372 (1889).

Poliopsar malabaricus, *Sharpe, Cat. Birds B. M.* xiii. p. 48 (1890).

Spodiopsar malabaricus, *Sharpe, Hand-l.* v. p. 516 (1909); *Nehrke, Kat. Eiersamml.* p. 348 (1910).

The eggs of the Grey-headed Myna are of a pointed oval form, with a large amount of gloss. They vary from pale to dark greenish-blue, and measure from .87 to .97 in length, and from .68 to .72 in breadth.

Four eggs of the Collared Myna resemble those of *A. tristis*. They measure : 1.1 by .82 (2); 1.09 by .81; and 1.06 by .83.

4. Bhamo, Burma, 15th May.

Col. H. H. Harington [P.].

Family EULABETIDÆ.

Genus **SARCOPS**, *Wahlen.*

Sarcops calvus (*Linn.*).

(Plate XVIII. fig. 11.)

Sarcops calvus, *Sharpe, Cat. Birds B. M.* xiii. p. 97 (1890) [part.]; *Ogilvie-Grant, Ibis*, 1895, pp. 258 & 456, 1896, p. 469; *McGregor, Man. Philippine Birds*, pt. ii. p. 718 (1909); *Sharpe, Hand-l.* v. p. 522 (1909) [part.].

Two eggs of the Grey-backed Coeto are of a pointed oval form and slightly glossy. They are pale blue sparingly marked all over with distinct spots and small blotches of pale brown and lilac-grey. They measure respectively : 1.28 by .9; 1.26 by .88.

2. Marinduque, Philippine Is., May Crowley Bequest.
(*E. L. Moseley*).

Sarcops melanonotus, *Ogilvie-Grant.*

(Plate XVIII. fig. 10.)

Sarcops calvus, *Kutter (nec Linn.)*, *J. f. O.* 1883, p. 312; *Sharpe, Cat. Birds B. M.* xiii. p. 97 (1890) [part.]; *Ogilvie-Grant, Ibis*, 1895, p. 258, 1896, p. 554; *Whitehead, Ibis*, 1899, p. 241 [part., Samar]; *Sharpe, Hand-l.* v. p. 522 (1909) [part.]; *Nehrk. Kat. Eiersamml.* p. 350 (1910).

Sarcops melanonotus, *Ogilvie-Grant, Bull. B. O. C.* xvi. p. 100 (1906); *id., Ibis*, 1906, p. 469; *McGregor, Man. Philippine Birds*, pt. ii. p. 719 (1909).

An egg of the Black-backed Coeto differs somewhat from those of *S. calvus* described above in being very glossy. The ground-colour is pale bluish-green, and the umber-brown and lilac-grey spots and blotches are mostly concentrated round the larger end. It measures 1.3 by .92.

1. S.E. Mindanao, Philippine Is. (O. Crowley Bequest.
Kock & A. Schadenberg; Kutter Coll.).

Genus **EULABES**, Cuvier.**Eulabes religiosa** (Linn.).

(Plate XVIII. figs. 14 & 15.)

Gracula religiosa, Thien. *Fortypflanz. ges. Vög.* tab. xxxviii. fig. 11 (1845-54).*Eulabes religiosa*, Legge, *Birds Ceylon*, p. 682 (1879); Oates, *Fauna Brit. Ind., Birds*, i. p. 510 (1889); Oates, ed. Hume, *Nests & Eggs Ind. Birds*, i. p. 363 (1889); Sharpe, *Hand-l.* v. p. 522 (1909).*Mainatus religiosus*, Sharpe, *Cat. Birds B. M.* xiii. p. 99 (1890).

The eggs of the Southern-Indian Grackle are of an elongate oval shape and moderately glossy. They are greenish-blue, sparingly spotted and blotched with pale chocolate-red and lilac. The markings appear to be very evenly distributed over the shell. Five examples measure from 1·2 to 1·38 in length, and from ·85 to ·9 in breadth.

Genus **HARTLAUBIUS**, Bonap.

Hartlaubius auratus (*P. L. S. Müller*).

(Plate XVIII. fig. 20.)

Hartlaubia madagascariensis, *E. Newton, Ibis*, 1863, p. 349; *Cowan, Proc. R. Phys. Soc. Edinb.* vii. p. 149 (1882).

Hartlaubius madagascariensis, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* i. p. 311, pl. 302. fig. 17 (1879); *Sharpe, Cat. Birds B. M.* xiii. p. 120 (1890); *Nehr. Kat. Eiersamml.* p. 122 (1899).

Hartlaubius auratus, *Shelley, Birds Afr.* v. p. 36 (1906); *Sharpe, Hand-l.* v. p. 525 (1909); *Nehr. Kat. Eiersamml.* p. 525 (1910).

One egg of the Madagascar Tree-Starling is of an elongate oval shape and slightly glossy. It is pale greenish-blue, profusely speckled and spotted, especially at the broad end where the markings are larger and more or less confluent, with dull reddish-brown and lavender. It measures 1·08 by ·7. Two others are of a somewhat blunt oval shape and devoid of gloss, but are similarly marked. They measure ·92 by ·7; and ·92 by ·68.

2. Madagascar (*Gerrard: Tristram Coll.*). Crowley Bequest.
1. Betsileo, Madagascar. Rev. W. Deans Cowan [P.]

Genus **APLONIS**, Gould.

Aplonis cantoroides, Gray.

Calornis cantor, *Layard, Ibis*, 1880, p. 295.

Aplonis cantoroides, *Sharpe, Cat. Birds B. M.* xiii. p. 128 (1890); *id., Hand-l.* v. p. 527 (1909); *Nehr. Kat. Eiersamml.* p. 350 (1910).

Three eggs of Cantor's Tree-Starling are of a rather wide oval shape and glossy. The ground is pale blue or very pale greenish-blue sparingly marked with spots and dots of dark brown, umber, and two shades of lilac-grey, the markings being most numerous

towards the larger end. They measure respectively: 1.11 by .81; 1.1 by .81; and 1.06 by .85.

1. Duke of York, Bismarck Archip. Crowley Bequest.
2. New Britain, Bismarck Archip. Crowley Bequest.

Aplonis brevirostris (Peale).

(Plate XVIII. fig. 16.)

Aplonis brevirostris, *Whitmee, Ibis*, 1875, p. 440; *Sharpe, Cat. Birds B. M.* xiii. p. 130 (1890); *Nehrk. Kat. Eiersamml.* p. 122 (1899), p. 350 (1910); *Sharpe, Hand-l.* v. p. 527 (1909).

The eggs of the Short-billed Tree-Starling are of an elongate oval form and possess a small amount of gloss. They are pale greenish-blue, spotted and blotched with chestnut, lilac, and purplish-grey, and are inseparable from some eggs of *Lamprocorax metallica*. They measure respectively: 1.08 by .7; 1.12 by .73.

2. Samoa, Marsh. Rev. S. J. Whitmee [C.].

Aplonis vitiensis, *Layard*.

(Plate XVIII. fig. 17.)

Aplonis tabuensis, *Layard (nec Gmel.)*, *P. Z. S.* 1875, p. 435.
Aplonis vitiensis, *Layard, P. Z. S.* 1876, p. 502; *id., Ibis*, 1876, p. 392; *Sharpe, Cat. Birds B. M.* xiii. p. 131 (1890); *id., Hand-l.* v. p. 527 (1909); *Nehrk. Kat. Eiersamml.* p. 350 (1910).

Three eggs of the Fiji Islands Tree-Starling are of a very broad oval shape and slightly glossy. One has the ground white, while in two it is of a pale greenish-blue: all are spotted and blotched with reddish-brown and lilac, and in one the markings are dense at the broad end and sparse elsewhere. They measure respectively: 1.09 by .8; 1.08 by .72; and 1.0 by .76.

1. Fiji Islands, Oct. (*F. M. Rayner*). Voy. H.M.S. 'Herald.'
2. Wakaya, Fiji Islands, 26th Dec. Crowley Bequest.
(E. L. Layard: Tristram Coll.).

Aplonis atrifusca, *Peale*.

Sturnoides atrifusca, *Whitmee, Ibis*, 1875, p. 440; *Layard, P. Z. S.* 1876, p. 494.
Aplonis atrifusca, *Sharpe, Cat. Birds B. M.* xiii. p. 134 (1890); *Nehrk. Kat. Eiersamml.* p. 122 (1899), p. 351 (1910); *Sharpe, Hand-l.* v. p. 528 (1909).

The eggs of the Blackish-brown Tree-Starling are of a narrow oval shape and almost devoid of gloss. They are of a greenish-blue colour, with a very few minute specks of lilac scattered here

and there over the shell. The specimens measure respectively: 1.35 by .91; 1.4 by .9. The measurements of an egg given by Nehr Korn are considerably less: 1.18 by .86.

2. Samoa, Sept.

Rev. S. J. Whitmee [C.].

Aplonis kittlitzii, Finsch & Hartl.

(Plate XVIII. fig. 12.)

Aplonis kittlitzii, Sharpe, *Cat. Birds B. M.* xiii. p. 136 (1890); *Hartert, Nov. Zool.* vii. p. 6 (1900); *Sharpe, Hand-l.* v. p. 528 (1909); *Nehr. Kat. Eiersamml.* p. 351 (1910).

Three eggs of Kittlitz's Tree-Starling are indistinguishable from those of *A. cantoroides*. They measure respectively: 1.21 by .82; 1.2 by .82; and 1.1 by .82.

1. Pelew Is., Carolines (*T. Kubar*: Crowley Bequest.
Tristram Coll.).

2. Ruk Is., Carolines, 26th May. Crowley Bequest.

Genus *LAMPROCORAX*, Bonap.

Lamprocorax metallica (Temm.).

Calornis metallica, Gould, *Handb. Birds Austr.* i. p. 477 (1865); *Ramsay, P. Z. S.* 1875, p. 593; *Layard, Ibis*, 1880, p. 295; *North, Nests & Eggs Birds, Austr.* p. 190 (1889); *Sharpe, Cat. Birds B. M.* xiii. p. 133 (1890); *Le Souëf, Ibis*, 1893, p. 52; *Nehr. Kat. Eiersamml.* p. 122 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 475, pl. 16 (1901); *North, Nests & Eggs Birds Austr.* ii. p. 265 (1909).

Lamprocorax metallica, *Sharpe, Hand-l.* v. p. 529 (1909); *Nehr. Kat. Eiersamml.* p. 351 (1910).

The eggs of the Shining Calornis are of a somewhat pointed oval shape and exhibit a considerable amount of gloss. They are of a pale greenish-blue colour, marked with spots and blotches of chestnut, lilac and purplish-grey. Some specimens are boldly blotched at the broad end only; others are spotted pretty evenly all over; and others again are very feebly marked with only a few specks. Examples measure from 1 to 1.18 in length, and from .74 to .8 in breadth.

 Onychognathus morio, *Shelley, Birds Afr.* v. p. 105 (1906).

Eggs of the Cape Glossy Tree-Starling vary in shape from a regular oval to a blunt oval and exhibit a moderate amount of gloss. They are of a greenish-blue colour, sparingly speckled and spotted with rufous, deep purplish-brown and lilac. They vary in length from 1·17 to 1·47; and in breadth from ·83 to ·99. The eggs of this species are said to be sometimes uniform blue without markings.

Genus **CREADION**, Vieill.**Creadion carunculatus** (Gmel.).

(Plate XIX. fig. 5.)

Creadion carunculatus, *Sharpe, Cat. Birds B. M.* iii. p. 144 (1877); *Reischek, Trans. & Proc. N. Zeal. Inst.* xix. p. 188 (1887); *Buller, Birds N. Zeal.* 2nd ed. i. p. 18 (1888); *id., Suppl.* ii. p. 161 (1905); *Sharpe, Hand-l.* v. p. 544 (1909).

An egg of the "Saddle-Back" is of a rather long and somewhat pointed oval shape, almost without gloss. The ground-colour is pale greyish-pink, with spots and blotches of umber-brown, dark lilac-grey and pale lavender-grey, the markings being mostly concentrated round the larger end where they partially blend and form an irregular cap. It measures 1.25 by .85.

The white egg marked and spotted with purplish-brown and measuring 1.4 by 1.0 referred to this species by Buller (*vide supra*) has no doubt been wrongly identified. He also describes a second egg which agrees in every respect with the specimen in the British Museum.

1. New Zealand.

W. Radcliffe Saunders, Esq.
[P.].

Family ORIOLIDÆ.

Genus **ORIOLUS**, Linn.**Oriolus galbula**, Linn.

Oriolus galbula, *Thien. Fortpflanz. ges. Vög.* tab. xxvii. figs. 11, a-c (1845-54); *Baedeker, Eier Eur. Vög.* tab. 50. fig. 10 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 94, pl. xxvi. fig. i (1856); *Saunders, Ibis*, 1871, p. 221; *Sharpe, Cat. Birds B. M.* iii. p. 191 (1877); *Seebohm, Brit. Birds*, i. p. 589, pl. 11 (1883); *id., Eggs of Brit. Eiersamml.* p. 352 (1910).

Oriolus oriolus, *Rey, Eier Vög. Mitteleurop.* i. p. 345, pl. 43. figs. 1-4 (1900); *Jourd. Eggs Europ. Birds*, i. p. 41, pl. viii. figs. 1-4 (1906).

Oriolus oriolus oriolus, *Hartert, Vög. pal. Faun.* i. p. 51 (1903).

The eggs of the Golden Oriole are of an oval shape, some being lengthened and pointed, others short and blunt, and they are highly glossy. The ground is white, occasionally tinged with pink, and sparingly marked with specks and spots of deep purplish-brown or

black, which are frequently rufous at the edges and with underlying lavender. The markings are well-defined and usually of a roundish form, but sometimes they are elongate and otherwise irregular. They are more frequent at the broad end of the egg than elsewhere, but they are seldom sufficiently numerous to form a cap or zone. Some specimens in the Collection are very feebly marked. The eggs measure from 1·07 to 1·35 in length, and from ·78 to ·9 in breadth.

Oriolus diffusus, Sharpe.

- Oriolus diffusus*, Sharpe, *Cat. Birds B. M.* iii. p. 197 (1877); *Legge, Birds Ceyl.* p. 355 (1879); *Styan, Ibis*, 1887. p. 224; *Nehrk. Kat. Eiersamml.* p. 18 (1899); *Sharpe, Hand-l.* v. p. 547 (1909); *Nehrk. Kat. Eiersamml.* p. 352 (1910).
- Oriolus indicus*, Oates, *Fauna Brit. Ind., Birds*, i. p. 502 (1889); *Dresser, Man. Pal. Birds*, p. 228 (1902); *Hartert, Vög. pal. Faun.* i. p. 53 (1903); *Dresser, Ibis*, 1904, p. 487, pl. x. figs. 14 & 17.

The eggs of the Black-naped Oriole are of a narrow pointed oval form and have a considerable amount of gloss. They are of a pale-pinkish cream-colour, sparingly spotted and speckled with deep purplish-brown and pale lavender. Many of the larger spots are blurred at the edges and run into the surrounding ground-colour. The smaller spots are usually firm and well-defined. Five specimens measure from 1.1 to 1.2 in length, and from .78 to .9 in breadth.

Oriolus melanocephalus (Linn.).

Oriolus melanocephalus, *Sharpe, Cat. Birds B. M.* iii. p. 215 (1877); *Legge, Birds Ceylon*, p. 357 (1879); *Oates, Fauna Brit. Ind., Birds*, i. p. 506 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 359 (1889); *Sharpe, Hand-l.* v. p. 550 (1909); *Nehrke, Kat. Eiersamml.* p. 353 (1910).

The eggs of the Black-headed Oriole resemble those of *O. kundoo*, but the ground appears to be invariably tinged with pink, and the spots are paler and more numerous, with a greater tendency to be grouped at the broad end of the egg. They measure from 1.03 to 1.19 in length, and from .72 to .83 in breadth.

Oriolus trailli, Vigors.

Oriolus trailli, *Sharpe, Cat. Birds B. M.* iii. p. 222 (1877); *Nehr. Kat. Eiersamml.* p. 19 (1899); *Oates, Fauna Brit. Ind., Birds*, i. p. 508 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 362 (1889); *Sharpe, Hand-l.* v. p. 553 (1909); *Nehr. Kat. Eiersamml.* p. 353 (1910).

The eggs of the Maroon Oriole are quite inseparable from those of *O. melanocephalus*. The ground-colour is pinkish-white, and the markings, which are deep purplish-brown and dull lavender, are chiefly collected together about the broad end of the egg. One example measures 1·11 by ·8. The others are broken at the small end and cannot be accurately measured.

Genus *MIMETA*, King.

Mimeta flavocincta (King).

Mimeta flavocincta, *Gould, Handb. Birds Austr.* i. p. 466 (1865); *Meyer, Zeitschr. ges. Orn.* 1884, p. 292, taf. xvii. fig. 1; *Sharpe, Hand-l.* v. p. 553 (1909); *Nehr. Kat. Eiersamml.* p. 353 (1910).
Oriolus flavocinctus, *Sharpe, Cat. Birds B. M.* iii. p. 206 (1877); *Nehr. Kat. Eiersamml.* p. 19 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 80 (1901); *North, Nests & Eggs Birds Austr.* i. p. 79 (1902).

An egg of the Crescent-marked Oriole is of a pointed oval form and possesses a considerable amount of gloss. It is of a light creamy buff-colour, spotted and blotched with dark umber-brown, light yellowish-brown, and pale underlying lavender. The markings are more frequent as well as larger round the broad end of the egg, where they form an irregular zone. It measures 1·25 by ·86. This specimen does not agree well with the egg figured by Meyer.

Mimeta sagittata (Lath.).

(Plate XIX. figs. 11 & 12.)

- Oriolus viridis*, Ramsay, *Ibis*, 1863, p. 179; Sharpe, *Cat. Birds B. M.* iii. p. 212 (1877); *Nehrck. Kat. Eiersamml.* p. 19 (1899); Campbell, *Nests & Eggs Austr. Birds*, i. p. 81, pl. 6 (1901).
Mimeta viridis, Gould, *Handb. Birds Austr.* i. p. 462 (1865); North, *Nests & Eggs Birds Austr.* p. 183 (1889).
Oriolus sagittatus, North, *Nests & Eggs Birds Austr.* i. p. 75 (1902).
Mimeta sagittata, Sharpe, *Hand-l.* v. p. 555 (1909) [part.]; *Nehrck. Kat. Eiersamml.* p. 353 (1910).

The eggs of the New South Wales Oriole are of precisely the same type as the single egg of *M. flavocincta* described above, but are rather larger. In one specimen, however, the dark umber-brown markings are entirely absent, and the shell is thickly covered with spots, blotches, and clouds of yellowish-brown and inky-purple. In all the examples the markings are very numerous and prominent at the broad end, where they form an irregular zone or cap. They measure from 1.28 to 1.35 in length, and from .91 to .95 in breadth.

Mimeta affinis, Gould.

(Plate XIX. figs. 13 & 14.)

- Mimeta affinis*, Gould, *Handb. Birds Austr.* i. p. 465 (1865); North, *Nests & Eggs Birds Austr.* p. 184, pl. xi. fig. 12 (1889).
Oriolus affinis, Sharpe, *Cat. Birds B. M.* iii. p. 188 (footnote, 1877); Ramsay, *Proc. Linn. Soc. N.S.W.* vi. p. 576 (1881); Le Souëf, *Vict. Nat.* xvi. p. 62 (1899); *Nehrck. Kat. Eiersamml.* p. 19 (1899); Campbell, *Nests & Eggs Austr. Birds*, i. p. 79 (1901); North, *Nests & Eggs Birds Austr.* i. p. 78 (1902).
Mimeta sagittata, Sharpe, *Hand-l.* v. p. 555 (1909) [part.].

The eggs of the North Australian Oriole vary much in size and shape, some being of a broad oval, others much more elongate; they are fairly glossy. The ground varies from white to pale creamy-white, marked all over, but not very thickly, with well-defined spots and specks of dark umber-brown and underlying dull lavender. They vary in length from 1.23 to 1.42, and in

breadth from .87 to .95. One exceptionally small egg from Doorook measures 1.02 by .93 inch.

Sphecotheres flaviventris, Gould.

(Plate XIX. figs. 15 & 16.)

Sphecotheres flaviventris, Gould, *Handb. Birds Austr.* i. p. 463 (1865); *Sharpe, Cat. Birds B. M.* iii. p. 225 (1877); *Le Souëf, Viet. Nat.* xvi. p. 62 (1899); *Nehrke, Kat. Eiersamml.* p. 19 (1899); *Robinson & Laverock, Ibis*, 1900, p. 626; *Campbell, Nests & Eggs Austr. Birds*, i. p. 84, pl. 6 (1901); *North, Nests & Eggs Birds Austr.* i. p. 83 (1902); *Sharpe, Hand-l.* v. p. 555 (1909); *Nehrke, Kat. Eiersamml.* p. 353 (1910).

The eggs of the Yellow-bellied Fig-bird are of a somewhat pointed oval form and have a small amount of gloss. The ground is pale greyish-green, or warm pinkish-grey tinged with green, marked with specks, spots and small blotches of chestnut, orange-brown, and underlying pale purplish-red. The markings are thickly disposed over the broad end of the shell, where they form an irregular zone, and sparingly elsewhere, but one example in the series has the markings very evenly distributed over the whole surface of the shell. They measure from 1·17 to 1·32 in length, and from ·87 to ·9 in breadth.

Family DICRURIDÆ.

Genus *DICRURUS*, Vieill.*Dicrurus annectens* (Hodgs.).

(Plate XX. figs. 1-3.)

Dicrurus annectens, *Sharpe, Cat. Birds B. M.* iii. p. 231 (1877); *Oates, Fauna Brit. Ind., Birds*, i. p. 312 (1889); *Baker, Ibis*, 1906, p. 257; *Sharpe, Hand-l.* v. p. 556 (1909); *Nehrke, Kat. Eiersamml.* p. 354 (1910).

Eggs of the Crow-billed Drongo are of a broad oval shape, somewhat pointed towards the smaller end and slightly glossy. The eggs are of two types: in one the ground is white with spots and

blotches of deep chocolate-brown and purplish-grey, most of the markings being confined to the larger end. In the second type the ground is pinkish-white or pale pink, blotched and spotted with light red and pale lavender-grey, the markings, though most numerous at the larger end, being also distributed over the rest of the shell. They vary from 1 to 1.1 in length, and from .75 to .79 in breadth.

Genus **CHIBIA**, Hodgson.

Chibia hottentotta (Linn.).

Chibia hottentotta, *Swinhoe*, *Ibis*, 1861, p. 411, 1863, p. 96; *Sharpe*, *Cat. Birds B. M.* iii. p. 235 (1877); *Oates*, *Fauna Brit. Ind. Birds*, i. p. 320 (1889); *Oates*, ed. *Hume*, *Nests & Eggs Ind. Birds*, i. p. 213 (1889); *Nehrke*, *Kat. Eiersamml.* p. 19 (1899), p. 354 (1910); *Sharpe*, *Hand-l.* v. p. 557 (1909).

Chibia brevirostris, *Swinhoe*, *P. Z. S.* 1871, p. 378; *Nehrke*, *t. c.* p. 20.

The eggs of the Hair-crested Drongo are typically of a pointed oval shape, but some have the smaller end blunt or rounded. The majority are devoid of gloss, but a few exhibit some trace of it. The colour is extremely variable. The ground ranges from greyish-white to pinkish-white and pale salmon-pink. The markings are of many types. In one they consist of a few faint specks, barely visible till the egg is closely examined; in another the egg is closely stippled all over with pale lilac and rufous; in another the markings consist of specks and spots of pale chestnut and lavender, which often form a cap at the broad end; in a fourth type the shell is closely speckled and spotted with lavender, umber-brown and rufous; and lastly, there is another type in which the egg is densely spotted, streaked and blotched with pale chestnut and lavender, the markings generally forming an irregular cap. A few specimens have, moreover, some minute round black specks at the broad end. The eggs measure from 1.01 to 1.3 in length, and from .78 to .86 in breadth.

(Genus **DICRUROPSIS**, *Salvad.*

Dicruropsis bracteata (*Gould*).

(Plate XX. figs. 4 & 5.)

- Chibia bracteata*, *Gould, Handb. Birds Austr.* i. p. 235 (1865); *Sharpe, Cat. Birds B. M.* iii. p. 236 (1877); *Nehrk. Kat. Eiersamml.* p. 20 (1899); *Robinson & Laverock, Ibis*, 1900, p. 624; *Campbell, Nests & Eggs Austr. Birds*, i. p. 85, pl. 6 (1901); *North, Nests & Eggs Birds Austr.* i. p. 85 (1902).
- Dicruropsis bracteata*, *Sharpe, Hand-l.* v. p. 558 (1909); *Nehrk. Kat. Eiersamml.* p. 354 (1910).

The eggs of the Australian Drongo resemble some of the eggs of *Chibia hottentotta*. They are without gloss. In some the ground-colour is creamy-white, speckled and spotted with pale reddish-brown and purple. In others, the ground is white or pinkish-white, boldly blotched and streaked with umber-brown or chestnut and pale lavender. Others again are white, with scattered rounded spots of purplish-black and small blotches of lilac-grey. In most of the clutches the markings are more frequent at the larger end than elsewhere, and in one example they form a well-defined cap or zone. Specimens measure from 1·07 to 1·24 in length, and from ·76 to ·83 in breadth.

Dicruropsis carbonaria (Bonap.).

Chibia carbonaria, Sharpe, *Cat. Birds B. M.* iii. p. 238 (1877); *Rothsch. & Hartert, Nov. Zool.* iii. p. 236 (1896).

Dicruropsis carbonaria, *Salvad. Orn. Pap.* ii. p. 177 (1881); *Sharpe, Hand-l.* v. p. 559 (1909); *Nehr. Kat. Eiersamml.* p. 354 (1910).

Two eggs of the Papuan Drongo are of a somewhat long oval shape, rather pointed at the smaller end, and very slightly glossy. One has the ground white sparingly spotted all over with deep chocolate-brown and lilac-grey; the other has the ground pinkish-white, more densely marked with light purplish-brown and lilac-grey. In both eggs the markings are rather more numerous towards the larger end. They measure respectively 1.15 by .8; and 1.1 by .76.

Dr. Hartert describes other specimens collected by Meek as having the ground creamy-white spotted with larger patches of brownish-brick-red and purplish-grey, so no doubt all the different types laid by *Chibia hottentotta* would be found in a larger series of eggs of the present species.

Chibia borneensis, Sharpe, *P. Z. S.* 1879, p. 246; *id.*, *Ibis*, 1889, p. 187
McGregor, Manual Philipp. Birds, p. 707 (1909).

Dicruropsis borneensis, Sharpe, *Hand-l.* v. p. 560 (1909).

Two eggs of the Bornean Drongo are of a rather wide oval shape, somewhat pointed towards the smaller end, and devoid of gloss. The ground is pale pinkish-white, with small spots and dots of light umber-brown and lilac-grey distributed all over the shell, but rather more numerous towards the larger end. Both eggs measure 1.1 by .82.

2. Kina Balu, N. Borneo, 20th May Crowley Bequest.
(*J. Whitehead*).

Genus **CHAPTIA**, *Hodgson*.

Chaptia ænea (*Vieill.*).

(Plate XX. fig. 11.)

Chaptia ænea, *Sharpe*, *Cat. Birds B. M.* iii. p. 243 (1877); *Oates*, *Fauna Brit. Ind.*, *Birds*, i. p. 318 (1889); *Oates*, *ed. Hume*, *Nests & Eggs Ind. Birds*, i. p. 210 (1889); *Nehrke*, *Kat. Eiersamml.* p. 20 (1899), p. 354 (1910); *Sharpe*, *Hand-l.* v. p. 562 (1909).

The eggs of the Bronzed Drongo are of a regular oval form, sometimes rather pointed at the small end, and have but little gloss. The ground varies from a pinkish-fawn colour to a salmon-pink, marked, chiefly in a zone round the large end, with specks and clouds of pale pinkish-brown, inclining to purple. The specimens in the Collection are remarkably uniform in colour and markings. They measure from .76 to .88 in length, and from .6 to .64 in breadth.

Genus **BUCHANGA**, *Hodgson*.

Buchanga atra (*Hermann*).

(Plate XX. figs. 6 & 7.)

- Dicrurus longus*, *Thien. Fortpflanz. ges. Vög.* p. 334 (1845-54).
Edolius longus, *Thien. tom. cit.* tab. xxx. fig. 12.
Dicrurus macrocerus, *Beavan, P. Z. S.* 1864, p. 375.

Buchanga atra, *Sharpe, Cat. Birds B. M.* iii. p. 246 (1877); *Legge, Birds Ceylon*, p. 386 (1879); *Sharpe, Hand-l.* v. p. 562 (1909); *Nehrke, Kat. Eiersamml.* p. 356 (1910).

Dicurus ater, *Oates, Fauna Brit. Ind., Birds*, i. p. 312 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 198 (1889).

The eggs of the Black Drongo are typically of a pointed oval form, but the small end is sometimes blunt and rounded, and they are generally without gloss. They are of two distinct types. In one the ground is white, often spotless, at times marked with a varying number of specks and spots of black or very dark reddish-brown. In some of these eggs, the markings are few and minute. In others, they are numerous and almost invariably collected together over the broad end.

In the second type, the ground varies from pinkish-white to rich salmon-pink, and is generally rather profusely marked, chiefly at the broad end where the ground itself is often darker than elsewhere, with specks and spots of lavender, rich purplish-brown, and black; the edges of the spots are frequently blurred and they blend with the surrounding pink ground. The eggs measure from .87 to 1.15 in length, and from .7 to .85 in breadth.

Buchanga assimilis (*Bechst.*).

(Plate XX. figs. 9, 10, 12 & 13.)

Dicrurus musicus, *Gurney, Ibis*, 1860, p. 210.

Buchanga assimilis, *Sharpe, Cat. Birds B. M.* iii. p. 247 (1877); *Sharpe, ed. Layard, Birds S. Africa*, p. 408 (1875-84); *Marshall, Ibis*, 1900, p. 224; *Ogilvie-Grant, Ibis*, 1902, p. 402.

Dicrurus afer (*Licht. nec Linn.*), *Erlanger, J. f. O.* 1905, p. 703.

Buchanga adsimilis, *Sharpe, Hand-l.* v. p. 562 (1909); *Nehrke, Kat. Eiersamml.* p. 355 (1910).

Buchanga divaricata (*Licht.*), *Sharpe, t. c.* p. 563.

Eggs of the African Drongo vary from a rather elongate to a blunt oval shape. They are of two very different types. Some are white without gloss, and marked sparingly all over with small

rufous and lavender spots. Others have the ground-colour glossy dull salmon-pink marked, chiefly over the broad end, with spots, blotches and confluent clouds of very pale chestnut and underlying lavender. They measure from .9 to 1.02 in length, and from .69 to .75 in breadth.

Buchanga longicaudata (Jerd.).

(Plate XX. figs. 14-16.)

- Buchanga longicaudata*, *Sharpe, Cat. Birds B. M.* iii. p. 249 (1877); *Legge, Birds Ceylon*, v. 390 (1879); *Nehr. Kat. Eiersamml.* p. 20 (1899), p. 355 (1910); *Sharpe, Hand-l. v.* p. 563 (1909).
Buchanga pyrrhops, *Sharpe, Cat. Birds B. M.* iii. p. 251 (1877).
Dicrurus longicaudatus, *Oates, Faun. Brit. Ind., Birds*, i. p. 314 (1889);
Oates, ed. Hume, Nests & Eggs Ind. Birds, i. p. 203 (1889).

The eggs of the Indian Ashy Drongo are typically of a blunt oval form. Many are moderately glossy, but some are entirely without gloss. The colour is very variable. The ground ranges from pure white to pinkish-white, pale pink, and rich salmon-pink, and is speckled, spotted, and blotched with black, deep reddish-brown or chestnut. The underlying markings are pale grey or lavender and are usually very conspicuous. As a rule the broader half of the egg is densely marked and the smaller half more sparingly. Those eggs in which the ground is white generally have the markings small and separate; those in which the ground-colour is of some shade of pink have them large, undefined, and frequently confluent. Numerous specimens measure from .85 to 1.05 in length, and from .68 to .75 in breadth.

Buchanga leucogenys, Walden.

- Buchanga leucogenys*, Sharpe, *Cat. Birds B. M.* iii. p. 251 (1877); *Styan, Ibis*, 1887, p. 224; *Nehrke. Kat. Eiersamml.* p. 20 (1899), p. 355 (1910); *Sharpe, Hand-l. v.* p. 564 (1909).
Dicrurus leucogenys, Oates, *Faun. Brit. Ind., Birds*, i. p. 317 (1889).

The eggs of the White-checked Drongo vary from a blunt to a pointed oval shape and are without gloss. The ground varies from cream-colour to pale salmon-pink, and is spotted and blotched, mostly at the broad end, with chestnut and underlying lilac or lavender. The markings on some eggs are large and blotchy, on others small, roundish, and well-defined. Numerous specimens measure from .85 to 1.04 in length, and from .7 to .75 in breadth.

Genus **EDOLIUS**, *Cuvier*.**Edolius forficatus** (*Linn.*).

- Dicrurus forficatus*, *E. Newton*, *Ibis*, 1863, p. 248, pl. xiii. fig. 7; *Cowan*, *Proc. R. Phys. Soc. Edinb.* vii. p. 148 (1882); *Milne-Edwards & Grandidier*, *Hist. Nat. Madag., Ois.* ii. p. 399, pl. 304. fig. 2 (1885).
Edolius forficatus, *Sharpe*, *Cat. Birds B. M.* iii. p. 254 (1877); *Nehrk.* *Kat. Eiersamml.* p. 20 (1899), p. 355 (1910); *Sharpe*, *Hand-l.* v. p. 565 (1909).

Eggs of the Madagascar Drongo are of a broad oval form without gloss. They are white or pinkish-white, sparingly marked with specks and small spots of very dark umber-brown or reddish-brown and underlying lavender. The markings are almost entirely confined to the broad end. Six specimens measure from .91 to 1.14 in length, and from .71 to .75 in breadth.

Genus **DISSEMUROIDES**, *Hume*.**Dissemuroides andamanensis** (*Tytler & Beavan*).

(Plate XX. fig. 20.)

- Dissemuroides andamanensis*, *Sharpe*, *Cat. Birds B. M.* iii. p. 255 (1877); *Oates*, *Faun. Brit. Ind., Birds*, i. p. 321 (1889); *Osmaston*, *J. Bomb. Nat. Hist. Soc.* xvii. p. 156 (1906); *Sharpe*, *Hand-l.* v. p. 565 (1909).

Eggs of the Small Andamanese Drongo are of a regular oval shape and without gloss. They vary considerably in colour and markings. One set is white, rather sparingly marked all over with small spots and dots of dark purplish-brown and lavender-grey, the markings in two specimens being most numerous towards the larger end and forming an ill-defined zone. In a second set the ground is pinkish-white, with irregular marks, short dashes, and small blotches of light red and with larger blotches and markings of lilac-grey. A third set has the ground dull greyish-salmon-pink marked all over, but especially towards the larger end, with light umber-brown and lilac-grey spots which are mostly rather small. They vary in length from .98 to 1.05, and in breadth from .7 to .76.

Genus **BHRINGA**, *Hodgson*.**Bhringa remifer** (*Temm.*).

(Plate XX. fig. 21.)

Bhringa remifer, *Sharpe, Cat. Birds B. M.* iii. p. 257 (1877); *Oates, Faun. Brit. Ind., Birds*, i. p. 324 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 216 (1889); *Nehrke, Kat. Eiersamml.* p. 20 (1899), p. 355 (1910); *Sharpe, Hand-l.* v. p. 565 (1909).

Three eggs of the Lesser Racket-tailed Drongo are of a regular oval form and fairly glossy. The ground is of a rich salmon-pink colour. Two specimens are rather thickly spotted and blotched with chestnut and lavender; the third is smeared with dull chestnut and purplish-grey. In all the markings are chiefly distributed over the broad end of the shell and are more or less confluent. They measure respectively: 1·07 by ·73; 1·07 by ·75; ·97 by ·72.

Genus **DISSEMURUS**, *Gloger*.**Dissemurus paradiseus** (*Linn.*).

Dissemurus paradiseus, *Sharpe, Cat. Birds B. M.* iii. p. 258 (1877); *Legge, Birds Ceylon*, p. 399 (1879); *Oates, Faun. Brit. Ind., Birds*, i. p. 325 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 217 (1889); *Nehrke, Kat. Eiersamml.* p. 21 (1899), p. 355 (1910); *Osmaston, J. Bomb. Nat. Hist. Soc.* xvii. p. 157 (1906); *Sharpe, Hand-l.* v. p. 566 (1909).

The eggs of the Larger Racket-tailed Drongo are usually of a blunt oval form, but a few are somewhat pointed. They have a fair amount of gloss. The specimens are of three types. In one, the ground is white, speckled, spotted, and sometimes blotched with darker and paler shades of inky-purple, the markings being most numerous at the larger end. In the second type, the ground is pinkish-white, spotted, blotched, and clouded with two or more shades of chestnut and with pale lilac. In the third type, which is represented by one example only, the ground is pale salmon-pink, blotched all over with lavender and very pale rufous. The eggs measure from 1·05 to 1·2 in length, and from ·75 to ·85 in breadth.

- Ptilorhis magnifica intercedens*, *Hartert, Nov. Zool.* xvii. p. 488, pl. x. fig. 9 (1910).

Three eggs of the Papuan Rifle-Bird are of a regular oval shape, somewhat pointed towards the smaller end, and moderately glossy. The ground is pale buff or creamy-white, longitudinally streaked all over the shell with burnt-sienna, tawny brown and dark lilac-grey, but the markings are much more numerous about the larger end, round which they form a densely streaked band, the pole being often, however, nearly devoid of markings. They measure respectively 1·38 by ·95; 1·35 by ·93; and 1·26 by ·93.

- Ptilorhis alberti*, *Sharpe, Cat. Birds B. M.* iii. p. 156 (1877); *Campbell, Nests & Eggs Austr. Birds*, i. p. 76, pl. 6 (1901); *Ogilvie-Grant, Ibis*, 1912, p. 117, pl. iii. figs. 7 & 8.
- Craspedophora alberti*, *Le Souëf, Ibis*, 1897, p. 394, text-fig. 1; *Sharpe, Monogr. Paradis. & Ptilon.* i. p. 9 (1897); *North, Nests & Eggs Birds Austr.* i. p. 29 (1901); *Sharpe, Hand-l.* v. p. 568 (1909); *Nehrk. Kat. Eiersamml.* p. 355 (1910).
- Ptilorhis magnifica alberti*, *Hartert, Nov. Zool.* xvii. p. 488 (1910).

Two eggs of Prince Albert's Rifle-Bird are nearly elliptical in shape, the smaller end being slightly compressed, and have a

considerable amount of gloss. They are of a creamy-buff colour, sparingly marked with broad, longitudinal streaks, some of which are slate-colour and others of two shades of chestnut-brown. There are also a few spots and specks of a rufous colour scattered over the shell. The specimens measure respectively: 1.28 by .89; 1.26 by .9.

2. Cape York, N. Australia (H. Dudley Le Souëf, Esq. [E.]. Barnard).

Genus **ASTRAPIA**, Vieill.

Astrapia stephanieæ, Finsch & Meyer.

Astrarchia stephanieæ, Finsch & Meyer, *Zeitsch. ges. Orn.* ii. p. 378 (1885); Sharpe, *Monogr. Paradis. & Ptilon.* p. 43, pl. xx. (1894); *id.*, *Hand-l. v.* p. 572 (1909).

Astrapia stephanieæ, ? Hartert, *Nov. Zool.* xvii. p. 488, pl. x. fig. 8 (1910); Ogilvie-Grant, *Ibis*, 1912, p. 114, pl. iii. fig. 3.

An egg of Princess Stephanie's Bird-of-Paradise is of a regular and rather elongate oval shape and is less glossy than eggs of *Paradisea apoda* and *P. raggiana*. The ground is buff tinged with salmon-colour, and the longitudinal markings are mostly concentrated in two large patches on the broader half of the egg: besides these, there are numerous large and small spots scattered over the rest of the shell. The shell-markings are vandyke-brown and burnt-sienna and the underlying markings, which are few, large and all disposed longitudinally, are dull lavender-grey. It measures 1.65 by 1.1.

1. (Laid in captivity) Owen F. J. Brook, Esq. [P.].
Stanley Mts., 14th Aug.
(W. Goodfellow).

The egg figured by Dr. Hartert (*op. cit.*), and taken by A. S. Anthony in the Owen Stanley Mountains, 8000 ft., is much smaller than the one described above, which was laid in Mr. Brook's Aviary at Hoddam Castle. The former has possibly been wrongly identified, and is indistinguishable from eggs of *P. raggiana* found in the same district, but seldom met with above an altitude of 3000 ft. Mr. Brook's bird laid two other eggs quite similar to the one described above.

Genus **PARADISEA**, Linn.

Paradisea apoda, Linn.

Paradisea apoda, Sharpe, *Cat. Birds B. M.* iii. p. 166 (1877); Meyer, *Zeitschr. ges. Orn.* i. p. 293, pl. xvii. fig. 2 (1884); Sharpe, *Monogr. Paradis. & Ptilon.* i. p. 45 (1891); *id.*, *Hand-l. v.* p. 572 (1909); Goodfellow, *Avicult. Mag.* (3) i. p. 283 (1910); Ogilvie-Grant, *Ibis*, 1912, p. 113, pl. iii. fig. 2.

An egg of the Great Bird-of-Paradise is of a regular oval shape, slightly compressed towards the smaller end, and distinctly glossy. The ground is salmon-cream-colour, longitudinally streaked with burnt sienna and various shades of light and dark lilac-grey, the streaks being chiefly disposed round the larger half of the shell, the pole marked with a few spots only. It measures 1·54 by 1·08.

1. Silbattabatta, Wanumbai, Wokan Mrs. E. J. Johnstone [P.
I., Aru Is., 12th Dec. (W.
Goodfellow).

Paradisea raggiana, *Sclater*.

Paradisea raggiana, *Sharpe, Cat. Birds B. M.* iii. p. 169 (1877); *Ramsay, P. L. S. N. S. W.* viii. p. 26 (1883); *Sharpe, Monogr. Paradis. & Ptilon.* i. p. 48 (1896); *id., Hand-l.* v. p. 573 (1909); *Hartert, Nov. Zool.* xvii. p. 489, pl. x. fig. 3 (1910); *Ogilvie-Grant, Ibis*, 1912, p. 114, pl. iii. fig. 1.

Two eggs of the Marquis Raggi's Bird-of-Paradise are very similar to that of *P. apoda*, but the ground is of rather a deeper salmon-cream colour and the longitudinal streaks are rather more numerous and confluent at the larger end. They measure respectively 1·4 by 1·05; and 1·38 by ·91.

Genus **PHONYGAMA**, *Lesson*.

Phonygama jamesi, *Sharpe*.

Phonygama jamesi, *Sharpe, Cat. Birds B. M.* iii. p. 181 (1877); *id., Hand-l.* v. p. 579 (1909); *Nehrk. Kat. Eiersamml.* p. 356 (1910).
Phonygama purpureo-violacea, *Meyer, Zeitschr. ges. Orn.* ii. p. 375 (1885); *Sharpe, Monogr. Paradis. & Ptilon.* ii. p. 5 (1894).
Phonygamus jamesi, *Hartert, Nov. Zool.* xvii. p. 490, pl. x. fig. 10 (1910).

Two eggs believed to be those of James's Manucode are of a regular oval shape, slightly compressed at the smaller end; a third egg is much pointed, and all are glossy. The ground differs in each specimen, being pinkish-grey, buff tinged with pink, or rather bright salmon-buff. All three eggs are marked, mostly towards the broad end, with short more or less longitudinal streaks or spots of reddish-brown and lilac-grey; in the egg with the pinkish-buff ground, the markings are rather indistinct and blurred, while in the other two specimens the red-brown surface-markings stand out rather clearly from the lilac under-markings.

The eggs agree with the description given by Herr Nehrkorn and with that figured by Dr. Hartert.

They measure respectively: 1.5 by .95; 1.44 by .98; and 1.43 by 1.

2. South-east New Guinea.

Herr Weiske [C.].

Genus *MANUCODIA*, *Bodd.*

Manucodia altera, *Rothschild & Hartert.*

Manucodia atra, *Le Souëf, Ibis*, 1900, p. 612, text-fig. 1.

Manucodia ater altera, *Rothsch. & Hartert, Nov. Zool.* x. p. 84 (1903).

Manucodia altera, *Sharpe, Hand-l.* v. p. 579 (1909).

Manucodia atra altera, *Hartert, Nov. Zool.* xvii. p. 490, pl. x. fig. 12 (1910).

An egg believed to be that of Rothschild's Manucode is of a long oval shape, slightly compressed towards the smaller end, and somewhat glossy. The ground is white with a faint pinkish tinge, spotted profusely at the large end, very sparingly elsewhere, with chocolate-brown, purplish-brown and lilac-grey, the spots, especially those round the pole, extending longitudinally. It measures 1.55 by .99.

This egg agrees closely with the specimen procured in the Aru Islands by H. Kühn and figured by Dr. Hartert.

1. South-east New Guinea.

Herr Weiske [C.].

Manucodia jobiensis, *Salvad.*

Manucodia jobiensis, *Sharpe, Cat. Birds B. M.* iii. p. 184 (1877); *id.*, *Monogr. Paradis. & Ptilon.* ii. p. 13 (1898); *id.*, *Hand-l.* v. p. 580 (1909).

Two eggs of the Jobi Manucode are of a wide oval shape, very slightly compressed towards the smaller end, and almost without gloss. The ground is greyish-pink marked thickly round the broad end and very sparingly elsewhere with several shades of red-brown and lilac-grey, the latter markings being fused and forming a zone round the pole. They measure respectively: 1.25 by .97 and 1.25 by 9.5.

Genus **LOPHORHINA**, Vieill.**Lophorhina minor**, Ramsay.

Lophorhina superba minor, Ramsay, *Proc. Linn. Soc. N.S.W.* x. p. 242 (1885).

Lophorhina minor, Sharpe, *Monogr. Paradis. & Ptilon.* ii. p. 41, pl. xxiii. (1895); *id.*, *Hand-l.* v. p. 583 (1909); *Ogilvie-Grant, Ibis*, 1912, p. 116, pl. iii. fig. 6.

Lophorhina superba minor, Hartert, *Nor. Zool.* xvii. p. 487, pl. x. figs. 22, 23 (1910).

An egg of the Lesser Superb Bird-of-Paradise is of a regular oval shape, somewhat compressed at the smaller end, and distinctly glossy. The ground is pale brownish-cream-colour, thickly and finely spotted and dotted all over the shell with pale yellowish-brown and heavily marked round the broader end with longitudinal streaks of vandyke-brown and dark lilac-grey, the latter being more or less confluent. It measures 1·24 by ·85.

Two eggs figured and described by Dr. Hartert agree in size and general appearance with the above; but the longitudinal markings are distributed all over the shell. One has the ground-colour brownish-buff and the brownish-grey and pale brown markings rather faint; the other has the ground cream-colour, and the reddish-brown and bluish-grey markings much stronger.

Owen Stanley Range.

Genus **AMBLYORNIS**, Elliot.**Amblyornis inornatus** (Schl.).

Amblyornis inornata, Beccari, *Ann. Mus. Civ. Genov.* ix. p. 382 (1879); Gould, *Birds New Guinea*, i. pl. 46 (1879); Sharpe, *Cat. Birds B. M.* vi. p. 394 (1881); *id.*, *Monogr. Paradis. & Ptilon.* ii. p. 51 (1893); *id.*, *Hand-l.* v. p. 584 (1909).

An egg of the Gardener Bower-bird is of a narrow oval shape and moderately glossy. It is of a uniform cream-colour, and measures 1·65 by 1·09.

1. S.E. New Guinea. Herr Weiske [C.].

Amblyornis subalaris, Sharpe.

Amblyornis subalaris, Gould, *Birds New Guinea*, i. pl. 47 (1886); Sharpe, *Monogr. Paradis. & Ptilon.* ii. p. 55 (1894); *id.*, *Hand-l.* v. p. 584 (1909).

An egg of the Orange-crested Bower-bird is of a regular oval shape and moderately glossy. It is of a uniform cream-colour, and measures 1·6 by 1·11.

1. S.E. New Guinea. Herr Weiske [C.].

Genus **CHLAMYDODERA**, Gould.**Chlamydodera maculata**, Gould.

Chlamydodera maculata, Gould, *Handb. Birds Austr.* i. p. 450 (1865); Ramsay, *P. Z. S.* 1874, p. 605; *id.*, *Proc. Linn. Soc. N. S. W.* vii. p. 409, pl. 3. fig. 2 (1882); *id.*, *op. cit.* 2nd ser. i. p. 1059, pl. 19. fig. 1 (1886); Sharpe, *Cat. Birds B. M.* vi. p. 389 (1881); North, *Proc. Linn. Soc. N. S. W.* 2nd ser. i. p. 1157 (1886); *id.*, *Nests & Eggs Birds Austr.* p. 178, pl. xi. fig. 5 (1889); Sharpe, *Monogr. Paradis. & Ptilon.* ii. p. 71 (1898); Campbell, *Nests & Eggs Austr. Birds*, i. p. 198, pl. 9 (1901); North, *Nests & Eggs Birds Austr.* i. p. 41 (1902); Sharpe, *Hand-l.* v. p. 586 (1909); *Nehrsk. Kat. Eiersamml.* p. 357 (1910).

The eggs of the Spotted Bower-Bird are of a somewhat pointed oval shape and moderately glossy. They are of a very pale green colour, covered, but most densely about the middle portion of the egg, with blotches and an intricate entanglement of lines, both coarse and fine, of an umber-brown, sienna, and blackish-brown colour. In addition, there are numerous underlying lavender blotches. Three examples measure respectively: 1.45 by 1.03; 1.39 by 1; and 1.35 by .98.

Heterocorax capensis minor, *Reich. Vög. Afr.* ii. p. 638 (1903).

The eggs of the African Rook are of a narrow, pointed oval shape and moderately glossy. They vary from reddish-white to salmon-pink, and are marked with rich chestnut, lilac-red, or pale

reddish-brown and underlying lavender or lilac-grey. The markings on some eggs are small and extremely dense, covering the greater part of the ground-colour; those on other eggs are bold and comparatively sparse, the larger blotches being of a very rich colour and the smaller ones paler. The eggs vary greatly in size, the smallest example in the Collection measuring 1.55 by 1.05, and the largest 2.12 by 1.34.

Birds*, i. p. 423 (1902); Rey, *Eier Vög. Mitteleurop.* i. p. 356 (1904), pl. 48 (1900); Jourdain, *Eggs Europ. Birds*, i. p. 1, pl. i. (1906); Dresser, *Eggs Birds Europe*, pts. xiii. & xiv. p. 434, pts. xi. & xii. pl. 5. figs. 1-7 (1908) [part.]; Sharpe, *Hand-l.* v. p. 590 (1909); Nehrke, *Kat. Eiersamml.* p. 357 (1910).

Corvus littoralis, Baedeker, *Eier Eur. Vög.* tab. 34. fig. 4 (1855-63).

Corvus sylvestris, Baedeker, *tom. cit.* tab. 34. fig. 3.

Corvus corax corax, Hartert, *Vög. pal. Faun.* i. p. 2 (1903).

The eggs of the Common Raven vary from a pointed to a regular

oval shape, and usually exhibit a fair amount of gloss. The ground-colour varies from a clear greenish-blue to a dingy olive-green, marked with different shades of brown, varying from pale greenish-brown to blackish-brown or even black, and underlying lavender. The markings on many specimens are small, distinct and sparse, on others blotchy or cloudy and frequently confluent on the larger half of the egg, where they form a very irregular cap. Between these two extreme types, variations of every kind may be found in a large series. Examples measure from 1·66 to 2·1 in length, and from 1·2 to 1·42 in breadth.

Corvus corax umbrinus, Hartert, *Vög. pal. Faun.* i. p. 8 (1903).

Eggs of the Brown-necked Raven resemble those of the *C. corax*, being clear greenish-blue, marked with different shades of brown and underlying lavender. One example is merely marked with a very few specks and small smears, while two others are rather densely mottled. The other specimens are intermediate in coloration. They measure from 1·7 to 1·86 in length, and from 1·2 to 1·27 in breadth.

Corvus philippinus, Bonap.

(Plate XXI. figs. 9 & 10.)

- Corone philippina*, Sharpe, *Cat. Birds B. M.* iii. p. 42 (1877); *McGregor, Man. Philipp. B.* ii. p. 722 (1909).
Corvus philippinus, Ogilvie-Grant & Whitehead, *Ibis*, 1898, p. 234; *Sharpe, Hand-l.* v. p. 594 (1909); *Nehrsk. Kat. Eiersamml.* p. 358 (1910).

Five eggs of the Philippine Crow are of a broad oval shape, slightly compressed at the smaller end, and distinctly glossy. In three specimens from Marinduque the ground is greenish-white, densely and uniformly mottled and spotted all over with umber-brown. In the other two the ground is pale bluish-white, one being mottled all over with pale umber-brown, while the other is almost devoid of markings except towards the smaller end,

where it is spotted with umber-brown and lilac-grey. They measure respectively: 1.5 by 1.1; 1.59 by 1.11; 1.62 by 1.14; 1.66 by 1.12; 1.68 by 1.13.

2. Philippine Is., May (*E. L. Moseley*). Crowley Bequest.

Corvus pusillus, *Tweedd.*

(Plate XXI. fig. 2.)

Corvus pusillus, *Tweedd.* *P. Z. S.* 1878. p. 622; *Ogilvie-Grant & Whitehead, Ibis*, 1898, p. 234, pl. vi. fig. 5; *McGregor, Mun. Philipp. B.* ii. p. 723 (1909); *Sharpe, Hand l. v.* p. 595 (1909).

An egg of the Small Philippine Crow is of an ovate shape, slightly rounded at the smaller end. The ground is greenish-white, minutely spotted and marked all over the surface with umber-brown, yellowish-brown, and pale lavender. It measures 1.48 by 1.03.

The specimen here described was taken by Steere from the oviduct of a female example of *C. pusillus*.

1. Mindoro, Philippine Is., June. J. B. Steere, Esq. [C.]

Corvus torquatus, *Linn.*

Corvus torquatus, *Swinhoe, Ibis*, 1867, p. 411; *Sharpe, Cat. Birds B. M.* iii. p. 21 (1877); *La Touche, Ibis*, 1892, p. 430; *Sharpe, Hand-l. v.* p. 596 (1909); *Nehrk. Kat. Eiersamml.* p. 358 (1910).

Most of the eggs of the Chinese Parson-Crow are inseparable from those of *C. corax*, and display great variety in colour and markings; but certain types, with the pale green ground-colour almost or entirely obscured by the confluent dark olive-brown markings, resemble those of *C. cornix* described below. They vary in size from 1.52 to 1.89 in length, and from 1.06 to 1.25 in breadth.

Corvus scapulatus, Daud.

Corvus scapulatus, *Thien. Fortpflanz. ges. Vög.* tab. xxxix. fig. 3, a-c (1845-54); *Sharpe, ed. Layard, Birds S. Africa*, p. 416 (1875-84); *Sharpe, Cat. Birds B. M.* iii. p. 22 (1877); *Cowan, Proc. R. Phys. Soc. Edinb.* vii. p. 149 (1882); *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* p. 444, pl. 304. fig. 6 (1885); *Nehrk. Kat. Eiersamml.* p. 13 (1899), p. 358 (1910); *Stark, Fauna S. Afr., Birds*, i. p. 12 (1900); *Reich. Vög. Afr.* ii. p. 634 (1903), *Sharpe, Hand-l. v.* p. 596 (1909).

Corvus albus, *Shelley, Birds Afr.* v. p. 144 (1906).

The eggs of the White-bellied Crow resemble those of *C. corax* and *C. cornix*, but are, as a rule, like those of the Common Indian House-Crow (*C. splendens*) described below, less boldly marked, with the ground-colour bluer and brighter. Specimens measure from 1·5 to 1·77 in length, and from 1·1 to 1·22 in breadth.

Birds*, i. p. 5, pl. ii. figs. 1-7 (1906); *Dresser, Eggs Birds Europe*, pts. xiii. & xiv. p. 432, and pts. xi. & xii. pl. 2. figs. 1-6 (1908); *Sharpe, Hand-l. v.* p. 596 (1909); *Nehrk. Kat. Eiersamml.* p. 358 (1910).

Corone cornix, *Sharpe, Cat. Birds B. M.* iii. p. 31 (1877).

Corvus cornix cornix, *Hartert, Vög. pal. Faun.* i. p. 9 (1903).

The eggs of the Hooded Crow resemble those of *C. corax* so closely as to require no separate description. Some specimens, however, are greenish-blue, almost spotless, and precisely similar eggs are not to be found among those of *C. corax* in the Collection. They vary from 1·5 to 1·8 in length, and from 1·1 to 1·28 in breadth.

An egg of the White-necked Raven is much like those of *C. corax*. It is of a rather broad oval shape slightly constricted towards the smaller end, and without gloss. The ground is pale greenish-white, spotted all over and blotched about the broad end with two shades of umber-brown. It measures 2.02 by 1.45.

The eggs of the Jackdaw vary from a narrow to a broad oval shape and exhibit a considerable amount of gloss. The ground-colour ranges from bluish-white to pale bluish-green and the eggs are marked with dark greenish-brown, umber-brown or blackish-brown and underlying lavender. The markings on some specimens consist entirely of spots and specks; in others of spots and bold blotches. They are generally evenly distributed over the shell, but in a small proportion they are somewhat more dense at the broad end than elsewhere. Two examples in the Collection are bluish-white, marked with merely a few blotches of pale lavender. Specimens measure from 1.28 to 1.6 in length, and from .91 to 1.08 in breadth.

Four eggs of the Fan-tailed Raven resemble those of *Corvus corax*. Those obtained at Luxor are smaller and measure respectively: 1·7 by 1·13, and 1·7 by 1·12. Those from Jericho are larger, measuring 1·98 by 1·24, and 1·9 by 1·28. The two eggs recorded by Mr. Dresser, and taken by Dr. Koenig at Jericho, appear to be intermediate in size, varying from 1·69 to 1·81 in length, and from 1·16 to 1·26 in breadth.

Genus **MACROCORAX**, *Sharpe*.**Macrocorax fuscicapillus** (*Gray*).

Macrocorax fuscicapillus, *Sharpe, Cat. Birds B. M.* iii. p. 51 (1877); *Salvad. Orn. Pap.* ii. p. 488 (1881); *Sharpe, Hand-l.* v. p. 602 (1909).

Two eggs, believed to be those of the Great-billed Crow, are much like some eggs of *Trypanocorax fragileyus*. They are of a long pointed oval shape, almost pyriform, and without gloss. The ground is pale greenish-white, heavily spotted at the broad end and sparingly elsewhere with darker and lighter umber-brown and underlying lavender-grey. They measure respectively: 1·81 by 1·25, and 1·75 by 1·28.

These eggs, purchased at Stevens's Sale Rooms in 1862, were sold as being those of *Manucodia atra*, which they certainly are not.

2. Mysol.

Birds*, i. p. 21, pl. 5. figs. 1-2 (1906); *Dresser, Eggs Birds Europ.* pts. xi. & xii. p. 418, pl. 1. figs. 9-12 (1908) [part.]; *Sharpe, Hand-l.* v. p. 603 (1909); *Nehrk. Kat. Eiersamml.* p. 359 (1910).

Nucifraga caryocatactes caryocatactes, *Hartert, Vög. pal. Faun.* i. p. 25 (1903).

Eggs of the Nutcracker are of a blunt oval form, often rather pointed towards the smaller end, and slightly glossy. They are pale greenish-white, and, as a rule, evenly marked all over the shell with small spots and markings of umber-brown or yellowish-brown and pale lilac-grey; in some specimens, however, the markings are more or less concentrated at the larger end. They vary in length from 1·25 to 1·43, and in breadth from ·95 to 1·02.

Pica pica pica, Hartert, Vög. pal. Faun. i. p. 19 (1903).

Eggs of the Common Magpie are generally of a regular oval shape, but some specimens are more elongate and somewhat compressed towards the smaller end. They are distinctly glossy. The ground is almost invariably pale green or greenish-white, occasionally pale bluish-white, and is usually marked all over the shell with spots and small blotches of umber-brown, or dark brown and pale lavender-grey. The markings vary a good deal in size, being very small and numerous in some examples and larger and fewer in others; while in some they obscure the greater part of the ground. In one rather peculiar clutch from Alton the ground is of rather bright a olive-green, and the markings are mostly concentrated at the larger end, forming a dark cap. The markings are occasionally most numerous at the smaller end. They vary in length from 1.22 to 1.47, and in breadth from .92 to 1.0.

Genus **UROCISSA**, *Cabanis*.

Urocissa occipitalis (*Blyth*).

(Plate XXII. figs. 1 & 3.)

Urocissa occipitalis, *Sharpe, Cat. Birds B. M.* iii. p. 70 (1877); *Bingham, Str. F.* ix. p. 191 (1880); *Oates, Faun. Brit. Ind., Birds*, i. p. 26 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 14 (1889); *Sharpe, Hand-l.* v. p. 606 (1909); *Nehrk. Kat. Eiersamml.* p. 360 (1910).

Eggs of the Red-billed Blue Magpie are of a regular oval shape, and almost devoid of gloss. The ground is pale buff or pale cream-colour, marked all over the shell, but especially at the larger end, with small spots and dots of umber-brown or reddish-brown and underlying lilac-grey; there are also a few small blotches of the latter colour, mostly about the larger end. They vary in length from 1.22 to 1.35, and in breadth from .92 to .97.

| 6. Five Finger Mountains, Central
Hainan, April. | J. Whitehead, Esq. [C.]. |
|---|--------------------------|

Genus *DENDROCITTA*, *Gould*.

Dendrocitta rufa (*Scop.*).

(Plate XXII. figs. 4-6.)

Dendrocitta rufa, *Sharpe, Cat. Birds B. M.* iii. p. 76 (1877); *Oates, Faun. Brit. Ind., Birds*, i. p. 30 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 19 (1889); *Sharpe, Hand-l.* v. p. 607 (1909); *Nehrke, Kat. Eiersamml.* p. 360 (1910).

Eggs of the Indian Tree-Pie are of a regular oval shape and very slightly glossy. The ground ranges from white or creamy-white to pale greenish- and bluish-white or pale green, and, in one remarkable clutch, to dull greyish-green. The markings are also

very variable, and range from light chestnut and reddish-brown to yellowish-umber or dark umber-brown, while the underlying shell-markings are grey or lilac-grey. In some clutches the markings are rather faint and distributed all over the shell, but generally more numerous towards the larger end; in the majority, however, the markings are more or less concentrated towards one end, usually the larger, and in the more heavily spotted examples form a zone or cap. The markings vary much in shape, in some eggs they take the form of large irregular spots and small blotches, while in others only small rounded spots are to be seen. They vary in length from 1.1 to 1.2, and in breadth from .72 to .89.

Dendrocitta frontalis, *McClell.*

Dendrocitta frontalis, *Sharpe, Cat. Birds B. M.* iii. p. 78 (1877); *Oates, Faun. Brit. Ind., Birds*, i. p. 33 (1889); *Stuart Baker, Journ. Bomb. N. H. Soc.* viii. p. 166 (1893); *id.*, *Ibis*, 1895, p. 41; *id.*, *Ibis*, 1906, p. 85; *Sharpe, Hand-l.* v. p. 607 (1909); *Nehrke, Kat. Eiersamml.* p. 360 (1910).

Eggs of the Black-browed Tree-Pie are of an oval shape and very slightly glossy. They are very Shrike-like in appearance. The ground is cream-colour, sometimes tinged with greenish, and spotted and blotched with yellowish- or reddish-umber-brown and lilac-grey, the markings being mostly concentrated in a heavy ring or cap round the larger end. Six eggs vary in length from 1.06 to 1.16, and in breadth from .78 to .86.

Mr. Stuart Baker says that eggs of this species can nearly all be matched with eggs of *D. rufa* or *D. himalayensis*, but are on the whole more richly marked.

| 2. North Cachar Hills, 25th May. | W. Radcliffe Saunders, Esq. [P.]. |

Dendrocitta sinensis (Lath.).

Dendrocitta sinensis, *Swinhoe, Ibis*, 1868, p. 62, 1870, p. 351; *id.*, *P. Z. S.* 1871, p. 382; *Sharpe, Cat. Birds B. M.* iii. p. 81 (1877); *id.*, *Hand-l.* v. p. 608 (1909); *Nehrk. Kat. Eiersamml.* p. 360 (1910).

An egg of the Chinese Tree-Pie does not differ in any way from eggs of *D. frontalis* described above.

1. Amoy, China (*R. Swinhoe*). Seebohm Coll.

Dendrocitta cinerascens, Sharpe.

(Plate XXII. fig. 7.)

Dendrocitta cinerascens, *Sharpe, Ibis*, 1879, p. 250, 1889, p. 81; *id.*, *Hand-l.* v. p. 608 (1909).

An egg of the Kina Balu Tree-Pie is much like that of *Pica pica*. The ground is greenish-white, finely spotted all over with two shades of umber-brown and lilac-grey, the markings being, however, chiefly concentrated round the larger end, where they form a dense zone almost hiding the ground-colour. It measures 1.2 by .89.

1. Kina Balu, N. Borneo, 13th March Crowley Bequest.
(*J. Whitehead*).

Genus CRYPSIRHINA, Vieill.**Crypsirhina varians (Lath.).**

Crypsirhina varians, *Sharpe, Cat. Birds B. M.* iii. p. 83 (1877); *Oates, Str. F.* v. p. 159 (1877); *id.*, *Birds Burmah*, i. p. 401 (1883); *id.*, *Faun. Brit. Ind., Birds*, i. p. 35 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 25 (1889); *Sharpe, Hand-l.* v. p. 608 (1909); *Nehrk. Kat. Eiersamml.* p. 360, pl. i. fig. 3 (1910).

Eggs of the Black Racket-tailed Magpie are precisely like that of *Dendrocitta cinerascens* described above, but are much smaller. They vary in length from .88 to 1.09, and in breadth from .68 to .75.

Genus **CISSA**, Boie.

Cissa chinensis (Boddl.).

Cissa speciosa, Bingham, *Str. F.* v. p. 85 (1877).

Cissa chinensis, Sharpe, *Cat. Birds B. M.* iii. p. 85 (1877); Oates, *Birds Burmah*, i. p. 406 (1883); *id.*, *Faun. Brit. Ind., Birds*, i. p. 28 (1889); Oates, ed. Hume, *Nests & Eggs Ind. Birds*, i. p. 17 (1889); Sharpe, *Hand-l.* v. p. 608 (1909); *Nehr. Kat. Eiersamml.* p. 361 (1910).

Eggs of the Green Magpie are of a broad oval shape and distinctly glossy. The ground is white or yellowish-white, uniformly freckled all over the shell with yellowish- or reddish-brown and lavender. In some specimens the markings are so small and numerous all over the shell that they almost entirely hide the ground-colour, but in the majority they are densest at the broader end, where they form a cap or zone. They measure from 1.11 to 1.24 in length, and from .9 to .91 in breadth.

Genus **CALOCITTA**, Gray.

Calocitta colliei (Vigors).

(Plate XXII. fig. 10.)

Calocitta colliei, Lawr. *Mem. Bost. Soc. N. H.* ii. p. 284 (1874); Sharpe, *Cat. Birds B. M.* iii. p. 89 (1877); Salv. & Godm. *Biol. Centr.-Amer., Aves*, i. p. 507 (1887); Jouy, *Pr. U. S. Nat. Mus.* xvi. p. 782 (1893); Ridgw. *Birds North & Middle Amer.* iii. p. 294 (1904); Sharpe, *Hand-l.* v. p. 610 (1909); *Nehr. Kat. Eiersamml.* p. 361 (1910).

Three eggs of Collie's Magpie-Jay are of a regular oval shape, somewhat compressed towards the smaller end, and distinctly glossy. The ground is dull greyish-white, sparingly spotted all over with dark vandyke-brown and more thickly with lighter and

darker lilac-grey. They measure respectively: 1.44 by 1.0; 1.42 by .99; and 1.39 by .96.

2. Mazatlan, Sinaloa, W. Mexico Crowley Bequest.
(*A. Forrer*).
1. Mazatlan (*A. F.*) Crowley Bequest.

Genus **PLATYSMURUS**, *Reichenb.*

Platysmurus aterrimus (*Temm.*).

Platysmurus aterrimus, *Sharpe, Cat. Birds B. M.* iii. p. 91 (1877); *id.*, *Hand-l.* v. p. 610 (1909).

An egg of the Black Bornean Jay is of a broad oval shape and apparently without gloss. The ground is white, finely spotted all over, but especially towards the larger end where the markings form a rather dense cap, with yellowish-brown and grey, the latter colour greatly predominating.

1. Baram Dist., N. Borneo, 21st June. Dr. C. Hose [P.].

Genus **GARRULUS**, *Brisson.*

Garrulus glandarius (*Linn.*).

Corvus glandarius, *Thien. Fortpflanz. ges. Vög.* tab. xli. figs. 6, a-f (1845-54).

Garrulus glandarius, *Baedeker, Eier Eur. Vög.* tab. 50. fig. 17 (1855-63): *Sharpe, Cat. Birds B. M.* iii. p. 93 (1877) [part.]; *Newton, Ootheca Wotleyana*, pt. ii. p. 493 (1902) [part.]; *Dresser, Man. Pal. Birds*, i. p. 411 (1902) [part.]; *Rey, Eier Vög. Mitteleurop.* i. p. 371 (1904), pl. 46. figs. 1-6 (1900); *Dresser, Eggs Birds Europe*, pts. xi. & xii. p. 421 (1908); *Sharpe, Hand-l.* v. p. 611 (1909); *Nehrk. Kat. Eier-samml.* p. 361 (1910).

Garrulus glandarius glandarius, *Hartert, Vög. pal. Faun.* i. p. 29 (1903); *Jourd. Eggs Europ. Birds*, i. p. 26, pl. 7. figs. 1-6 (1906).

Eggs of the European Jay are of an oval shape and glossy. The ground varies from pale green to pale buff, and is finely freckled all over the shell with lighter or darker umber-brown and lilac-grey. Some specimens have the ground almost completely hidden by the markings, while in others it is plainly visible and the markings are comparatively few: in some clutches a well-marked zone of concentrated spots is found round the broader end, and occasionally round the smaller end. Irregular black hair-lines are often present. They measure from 1.22 to 1.3 in length, and from .85 to .95 in breadth.

Cractes infaustus, *Sharpe, Hand-l.* v. p. 614 (1909); *Nehrke, Kat. Eiersamm.* p. 361 (1910).

Eggs of the Siberian Jay vary in shape from a long rather pointed oval to a very wide oval, and are somewhat glossy. The ground is some shade of greenish-white or rarely pale greyish-green, spotted and blotched all over, but especially towards the larger end where the markings are often confluent and form a zone or irregular cap, with umber-brown, ashy-brown and lilac-grey. They vary in length from 1.18 to 1.32, and in breadth from .83 to .93.

- Cyanocitta cristata cristata*, *Ridgw. Birds North & Middle Amer.* iii. p. 347 (1904).

Eggs of the American Blue Jay are of a regular rather wide oval shape, sometimes somewhat pointed towards the smaller end, and slightly glossy. The ground-colour varies much, and may be dull greyish-green, pale olive-green, pale olive-brown, and occasionally pale whitish-buff. The shell is usually finely spotted all over, especially round the larger end, with umber-brown, or vandyke-brown and ash-grey or lilac-grey, but in some examples the markings are fewer and larger. They vary in length from 1.02 to 1.2, and in breadth from .81 to .85.

Aphelocoma californica (*Vigors*).

- Aphelocoma californica*, *Sharpe, Cat. Birds B. M.* iii. p. 113 (1877); *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 374, pl. v. figs. 15-18 (1895); *Sharpe, Hand-l.* v. p. 617 (1909); *Nehrck. Kat. Eiersamml.* p. 362 (1910).
Aphelocoma californica californica, *Ridgw. Birds North & Middle Amer.* iii. p. 327 (1904).

Eggs of the California Jay vary in shape from a broad oval to a somewhat pointed oval, and are distinctly glossy. The ground-colour varies from pale blue to greyish-green or pale olive-green. The blue examples from Los Angeles are very sparingly marked with small spots of reddish-brown and lilac: the other specimens are more or less spotted all over with reddish-brown or umber-brown and lilac or ash-grey, the markings being always most numerous towards the larger end, and in some specimens forming a distinct cap.

Aphelocoma cyanotis, *Ridgway*.

Aphelocoma cyanotis, *Bendire, Life-Hist. N. Amer. Birds*, ii. p. 382 (1895); *Ridgw. Birds North & Middle Amer.* iii. p. 335 (1904); *Sharpe, Hand-l.* v. p. 617 (1909).

Five eggs of the Blue-eared Jay are of a wide oval shape and slightly glossy. The ground-colour in one is greyish-blue and in the remaining four dull greyish-green. All are marked with chestnut and lilac-grey spots: rather faint in two specimens, mostly concentrated round the larger end in two more, and round the smaller end in the fifth. They bear a curious resemblance to strongly marked eggs of *Turdus viscivorus*. They measure respectively: 1.11 by .82; 1.1 by .8; 1.05 by .85; 1.03 by .8; and 1.02 by .81.

Genus **CYANOCORAX**, *Boie*.**Cyanocorax chrysops** (*Vieill.*).

Cyanocorax chrysops, *Sharpe, Cat. Birds B. M.* iii. p. 120 (1877); *Chubb, Ibis*, 1910, p. 646; *Sharpe, Hand-l. v.* p. 619 (1909); *Nehrk. Kat. Eiersamml.* p. 362 (1910).

Eggs of the Urraca Jay vary in shape from a broad to a somewhat pointed oval, and are slightly glossy. The ground varies from greyish-white to creamy-white and whitish-buff, and is generally thickly freckled all over with yellowish-brown and lilac-grey, the markings being usually most numerous at the broad end. In some clutches the markings are small and comparatively speaking few, in others they are much coarser and have a somewhat blotched appearance. In one abnormally coloured set the ground is pale bluish-white with small very dark brown spots and ash-grey under-markings, mostly concentrated about the large end. They vary in length from 1·18 to 1·4, and in breadth from ·88 to ·98.

Eggs of the South Brazilian Blue Jay vary from a wide to a regular oval shape, sometimes somewhat pointed towards the smaller end, and are very slightly glossy. The large series collected by Mr. Foster at Sapucay is remarkably uniform in appearance. All have the ground pale blue, boldly spotted and blotched with reddish chocolate-brown and lilac-grey of several shades. In most examples the markings are distributed all over the shell, but in one or two they are more numerous at the larger end and form an irregular wreath. They vary in length from 1.1 to 1.32, and in breadth from .83 to .91.

Fregilus graculus, *Loche, Expl. Sci. Algér.*, Ois. i. p. 116 (1867); *Hume & Henders. Lahore to Yark.* p. 243 (1873).

Graculus graculus, *Sharpe, Cat. Birds B. M.* iii. p. 146 (1877); *id.*, *Hand-l.* v. p. 627 (1909); *Nehrk. Kat. Eiersamml.* p. 364 (1910).

Graculus eremita, *Oates, Faun. Brit. Ind., Birds*, i. p. 43 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 31 (1889).

Pyrrhocorax pyrrhocorax, *Hartert, Vög. pal. Faun.* i. p. 35 (1903); *Jourd. Eggs Europ. Birds*, i. p. 30 pl. 2. figs. 8-11 (1906).

Eggs of the Chough vary in shape from a broad or regular oval to a somewhat pointed oval, and are almost devoid of gloss. The ground is white, creamy-white, or pale greenish-white, marked all over the shell, sometimes sparingly, sometimes densely, with spots and small blotches of umber-brown and lilac-grey of different shades, the markings being usually more numerous and rather larger at the broad end.

European eggs vary in length from 1.47 to 1.62, and in breadth from 1.01 to 1.16.

An Algerian egg measures 1.42 by 1.

The egg laid by the larger Tibetan race, named *Fregilus himalayanus*. Gould, is much larger than any other specimen in the Collection and measures 1.74 by 1.2. It does not differ in any other respect.

Genus *PODOCES*, *Fischer*.

Podoces panderi, *Fischer*.

Podoces panderi, *Cabanis*, *J. f. O.* 1873, p. 63, pl. 3. figs. 37 & 38; *Sharpe*, *Cat. Birds B. M.* iii. p. 150 (1877); *Newton*, *P. Z. S.* 1897, p. 893, pl. li. fig. 10; *Dresser*, *Man. Pal. Birds*, i. p. 406 (1902); *Hartert*, *Vög. pal. Faun.* i. p. 39 (1903); *Dresser*, *Eggs Birds Europ.* pts. xi. & xii. p. 417, pl. i. figs. 6 & 7 (1908); *Sharpe*, *Hand-l. v.* p. 628 (1909); *Nehrk. Kat. Eiersamml.* p. 364 (1910).

Eggs of Pander's Ground-Chough are of a rather broad oval shape, somewhat pointed towards the smaller end, and slightly glossy. The ground is pale greenish-white, spotted all over with light umber-brown and blotched with lilac-grey of various shades, the markings being generally most numerous round the larger end and forming a rather well-defined wreath. They vary in length from 1.01 to 1.21, and in breadth from .7 to .83.

Two eggs of the Dwarf Ground-Chough are of a rather long and somewhat pointed oval shape, slightly glossy and pure white. They measure $\cdot 91$ by $\cdot 62$ and $\cdot 88$ by $\cdot 62$.

2. Koko-nor, Eastern Tibet (*Rothschild Coll.*). Crowley Bequest.

Family STREPERIDÆ.

Genus **STREPERA**, Lesson.

Strepera graculina (*White*).

(Plate XXII. fig. 9.)

Strepera graculina, Gould, *Handb. Birds Austr.* i. p. 168 (1865); *Sharpe, Cat. Birds B. M.* iii. p. 57 (1877); *North, Nests & Eggs Birds Austr.* p. 55 (1889); *Campbell, Nests & Eggs Austr. Birds.* i. p. 58 (1901); *North, Nests & Eggs Birds Austr.* i. p. 8 (1901); *Sharpe, Hand-l.* v. p. 629 (1909); *Nehrke, Kat. Eiersamml.* p. 364 (1910).

Two eggs of the Pied Crow-Shrike are of a broad oval form, and slightly pointed towards the smaller end. The ground is dull greyish-pink, rather sparingly spotted with umber-brown and lilac-grey of several shades. In one egg the markings are more numerous round the larger end and form an ill-defined wreath. They measure respectively: $1\cdot 69$ by $1\cdot 21$ and $1\cdot 65$ by $1\cdot 22$.

2. Liverpool, New South Wales, Oct. Crowley Bequest.
(*A. J. North*).

Strepera arguta, Gould.

Strepera arguta, Gould, *Handb. Birds Austr.* i. p. 171 (1865); *Sharpe, Cat. Birds B. M.* iii. p. 59 (1877); *North, Nests & Eggs Birds Austr.* p. 57 (1889); *Campbell, Nests & Eggs Austr. Birds.* i. p. 59 (1901); *North, Nests & Eggs Birds Austr.* i. p. 10, pl. B i. fig. 9 (1901); *Sharpe, Hand-l.* v. p. 629 (1909); *Nehrke, Kat. Eiersamml.* p. 364 (1910).

Four eggs believed to be those of the Hill Crow-Shrike are much like eggs of *S. graculina* in having the ground-colour greyish-pink, but the markings are in the form of scattered rounded chocolate-coloured spots, with blurred edges and minute dots of the same colour; there is also an indistinct tracery of pale chocolate-pink smears and lines, more apparent in some of the eggs than in others. They measure respectively: $1\cdot 68$ by $1\cdot 15$; $1\cdot 62$ by $1\cdot 17$; $1\cdot 59$ by $1\cdot 14$; and $1\cdot 56$ by $1\cdot 14$.

A fifth egg is much smaller, and has the ground-colour greyish-pink, with spots and small blotches of burnt-sienna and bluish-grey, most of the markings being rather faint. It measures $1\cdot 49$ by $1\cdot 06$.

5. [Tasmania.]

Crowley Bequest.

***Strepera vieilloti*, Mathews.**

Strepera cuneicaudata, *North, Nests & Eggs Birds Austr.* p. 55, pl. vii. fig. 1 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 60 (1901) [part.]; *North, Nests & Eggs Birds Austr.* i. p. 14, pl. B i. fig. 13 (1901) [part.].

Strepera versicolor, *Sharpe, Hand-l.* v. p. 630 (1909) [part.].

Strepera versicolor vieilloti, *Mathews, Nov. Zool.* xviii. p. 444 (1912).

Eggs of Vieillot's Crow-Shrike resemble those of *S. graculina* in markings, but the ground-colour varies from almost creamy-white, pale greyish-pink, and pale brownish-pink to pale pinkish brick-colour. Some specimens have more or less marked blackish hair-lines round the larger end. They vary from 1.63 to 1.78 in length, and from 1.16 to 1.23 in breadth.

***Strepera plumbea*, Gould.**

Strepera anaphonensis, *Gould (nec Temm.), Handb. Birds Austr.* i. p. 173 (1865).

Strepera plumbea, *Sharpe, Cat. Birds B. M.* iii. p. 60 (1877); *North, Nests & Eggs Birds Austr.* i. p. 16 (1901); *Sharpe, Hand-l.* v. p. 630 (1909); *Nehr. Kat. Eiersamml.* p. 364 (1910).

Strepera cuneicaudata plumbea, *Campbell, Nests & Eggs Austr. Birds*, i. p. 60, pl. (1901).

Eggs of the Leaden Crow-Shrike have the ground-colour generally darker than in *S. graculina*, and vary from pale reddish-brick-colour or dull pinkish-grey to darker brownish-red; the markings are the same, and one egg has a black hair-line as in *S. arguta*. In one specimen from [W. Australia], believed to be of this species, the markings are concentrated in a broad zone

round the larger end. They vary in length from 1.52 to 1.71, and in breadth from 1.17 to 1.2.

Strepera intermedia, Sharpe.

Strepera intermedia, Sharpe, *Cat. Birds B. M.* iii. p. 59 (1877); *North, Pr. Linn. Soc. N. S. W.* (2) ii. p. 405 (1887); *North, Nests & Eggs Birds Austr.* p. 56 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 62 (1901).

Strepera fusca, Ashby, *Emu*, v. p. 27 (1905); *Sharpe, Hand-l.* v. p. 630 (1909).

Two eggs of Sharpe's Crow-Shrike are similar to those of *S. graculina*, the ground-colour being pale greyish-pink in both specimens; the markings are most numerous towards the smaller end. They measure respectively: 1.55 by 1.25 and 1.62 by 1.21.

There can be no doubt that *S. fusca*, Ashby, from York Peninsula, is synonymous with *S. intermedia*, Sharpe, from Port Lincoln; and that the latter is quite distinct from *S. melanoptera*, Gould, with which Sharpe himself has united it in his Hand-list.

| 2. York Peninsula, South Australia, | Crowley Bequest. |
| 14th Oct. (<i>A. J. North</i>). | |

Strepera fuliginosa (Gould).

Strepera fuliginosa, Gould, *Handb. Birds Austr.* i. p. 170 (1865); *Sharpe, Cat. Birds B. M.* iii. p. 61 (1877); *North, Nests & Eggs Birds Austr.* p. 57 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 62 (1901); *North, Nests & Eggs Birds Austr.* i. p. 17, pl. B i. fig. 11 (1901); *Sharpe, Hand-l.* v. p. 630 (1909); *Nehrke, Kat. Eiersamml.* p. 364 (1910).

Five eggs of the Sooty Crow-Shrike resemble those of *S. graculina*, but all are of a rather more elongate oval shape and distinctly pointed towards the smaller end. The ground varies from pinkish-cream-colour and greyish-pink to pale brick-colour. In the paler eggs the umber-brown and lilac-grey markings are somewhat faint, while the darker eggs from King Island are more strongly and densely marked and show traces of black hair-lines round the larger end. North assures us that *S. fuliginosa* is the species found on the Islands in Bass Strait, and that it is especially common on the shores of King Island. They measure respectively: 1.88 by 1.12; 1.82 by 1.24; 1.8 by 1.25; 1.75 by 1.12; and 1.7 by 1.16.

EXPLANATION OF THE PLATES.

PLATE I.

- Fig. 1. *Zosterops aignani*.
2. *Dicaeum cinereigulare*.
3. *Pardalotus ornatus*.
4. *Hedylipna metallica*.
5. *Cinnyris habessinicus*.
6. *Piprisoma squalidum*.
7. *Ethopyga siparaja*.
8. *Arachnothera longirostris*.
9. *Eudrepanis puicherrima*.
10. *Ethopyga vigorsi*.
11. *Chalcoparia phænicotis*.
12. *Ethopyga scherie*.
13. *Arachnothera magna*.
14. *Arachnechthra asiatica*.
15. " "
16. *Cinnyris leucogaster*.
17. *Nectarinia famosa*.
18. *Melanocharis striativentris*.
19. *Chalcomitra amethystina*.
20. " "
21. *Anthothreptes collaris*.
22. " "
23. *Hermotimia christianae*.
24. *Leptocoma hasselti*.
25. *Anthothreptes malaccensis*.

PLATE II.

- Fig. 1. *Glyciphila albifrons*.
 2. *Ptilotis provocator*.
 3. „ *carunculata*.
 4. *Meliornis longirostris*.
 5. *Melithreptes brevirostris*.
 6. *Xanthotis lessoni*.
 7. *Melipotes fumigatus*.
 8. *Ptilotis procerior*.
 9. *Melithreptes brevirostris*.
 10. *Myzomela nigriventris*.
 11. „ *rubrata*.
 12. *Melirrhophetes batesi*.
 13. *Myzomela rubrata*.
 14. *Conopophila albigularis*.
 15. *Anthornis melanura*.
 16. „ *melanocephala*.
 17. „ „
 18. *Ptilotis sharpei*.
 19. „ *orientalis*.
 20. *Anthornis melanura*.
 21. *Melilestes poliopterus*.
 22. *Ptiloprora guisei*.

PLATE III.

- Fig. 1. *Helminthotherus vermivorus*.
 2. *Vermivora celata*.
 3. *Protonotaria citrea*.
 4. *Parula americana*.
 5. „ „
 6. *Myzantha flavigula*.
 7. „ „
 8. „ „
 9. „ *garrula*.
 10. *Tropidorhynchus subtuberosus*.
 11. „ „

- Fig. 12. *Philemon cockerelli*.
 13. *Myzantha lutea*.
 14. *Acanthochæra inauris*.
 15. *Tropidorhynchus argenticeps*.
 16. *Myzantha lutea*.
 17. *Dendræca bartholemica*.
 18. " "
 19. " *striata*.
 20. " *maculosa*.
 21. " *pennsylvanica*.

PLATE IV.

- Fig. 1. *Oporornis formosa*.
 2. *Siurus auricapillus*.
 3. *Myiothlypis nigricristatus*.
 4. " "
 5. *Motacilla ocularis*.
 6. " "
 7. *Icteria viridis*.
 8. *Motacilla leucopsis*.
 9. " "
 10. " *vidua*.
 11. " *maderaspatensis*.
 12. " "
 13. " *clara*.
 14. " *borealis*.
 15. " "
 16. " *alba*.
 17. " *cinereicapilla*.
 18. " *citreoloides*.
 19. " *schmitzi*.
 20. " *capensis*.
 21. " *melanogrisea*.
 22. *Dendranthus indicus*.

PLATE V.

- Fig. 1. *Anthus chloris*.
 2. " "
 3. " *brachyurus*.
 4. " *maculatus*.
 5. " *nilghiriensis*.
 6. " *vaalensis*.
 7. " *sordidus*.
 8. " "
 9. " *cockburnii*.
 10. " *rufulus*.
 11. " "
 12. " "
 13. " *rosaceus*.
 14. " "
 15. " *striolatus*.
 16. " *novae-zealandiae*.
 17. " "
 18. " *furcatus*.
 19. " *correndera*.
 20. " "
 21. " *blakistoni*.
 22. " *gustavi*.
 23. " "

PLATE VI.

- Fig. 1. *Macronyx capensis*
 2. *Oreocorys sylvanus*
 3. " "
 4. *Macronyx capensis*.
 5. " *croceus*.
 6. *Certhilauda capensis*.
 7. " "
 8. *Macronyx croceus*.
 9. *Alamon alaudipes*.

- Fig. 10. *Certhilauda albofasciata*.
 11. *Alamon alaudipes*.
 12. *Certhilauda albofasciata*.
 13. *Alamon pallida*.
 14. „ *damarensis*.
 15. *Chersophilus duponti*.
 16. *Rhamphocorys clot-bey*.
 17. *Otocorys alpestris*.
 18. „ *brandti*.
 19. „ *alpestris*.
 20. „ *occidentalis*.
 21. *Melanocorypha bimaculata*.

PLATE VII.

- Fig. 1. *Melanocorypha mongolica*.
 2. *Tephrocorys cinerea*.
 3. „ „
 4. „ „
 5. „ *anderssoni*.
 6. *Alauda julgula*.
 7. „ „
 8. *Spizocorys conirostris*.
 9. „ „
 10. *Alauda pekinensis*.
 11. „ *australis*.
 12. „ „
 13. „ „
 14. „ *cœlivox*.
 15. *Alaudula raytal*.
 16. *Mirafra nivosa*.
 17. „ *horsfieldi*.
 18. „ *woodwardi*.
 19. „ *africana*.
 20. „ *cantillans*.
 21. „ „
 22. „ *affinis*.

PLATE VIII.

- Fig. 1. *Galerida pallida*.
 2. *Spizalauda deva*.
 3. " "
 4. " "
 5. *Galerida pallida*.
 6. " *kleinschmidti*.
 7. " *macrorhyncha*.
 8. " "
 9. " "
 10. " *brachyura*.
 11. " "
 12. " *magna*.
 13. " *chendoola*.
 14. " "
 15. " *malabarica*.
 16. " "
 17. *Calendula crassirostris*.
 18. " "
 19. *Ammomanes phœnicura*.
 20. " "
 21. *Galerida theckla*.
 22. *Ammomanes isabellina*.
 23. *Eremopteryx australis*.

PLATE IX.

- Fig. 1. *Hesperiphona montana*.
 2. *Mycerobas carneipes*.
 3. *Perissospiza icteroides*.
 4. " "
 5. *Zamelodia melanocephala*.
 6. *Oryzoborus crassirostris*.
 7. *Pyrrohulagra grenadensis*.
 8. " *ruficollis*.
 9. *Sporophila grisea*.

- Fig. 10. *Sporophila obscura*.
 11. „ *moreleti*.
 12. „ „
 13. „ *gutturalis*.
 14. *Pyrrhuloxia sinuata*.
 15. *Euethia olivacea*.
 16. „ *pusilla*.
 17. *Volatinia splendens*.
 18. *Cardinalis canicauda*.
 19. „ „
 20. *Saltator medianus*.
 21. „ „
 22. *Cardinalis superbus*.

PLATE X.

- Fig. 1. *Passer motitensis*.
 2. *Spinus atratus*.
 3. *Rhodospiza obsoleta*.
 4. *Petronia maderensis*.
 5. *Gymnorhis transfuga*.
 6. „ „
 7. „ „
 8. *Carpospiza brachydactyla*.
 9. *Sycalis pelzelni*.
 10. *Poliospiza crocodygia*.
 11. *Carpodacus severtzovi*.
 12. *Propasser thura*.
 13. *Serinus sulphureus*.
 14. *Sorella emini*.
 15. *Alario alario*.
 16. *Fringilla teydea*.
 17. *Auripasser euchlorus*.
 18. „ „
 19. *Carpodacus cassini*.
 20. *Serinus marshalli*.
 21. *Uragus sibiricus*.
 22. *Carpodacus amplus*.

PLATE XI.

- Fig. 1. *Emberiza fucata*.
 2. " "
 3. " "
 4. " "
 5. " *arcuata*.
 6. " *chrysophrys*.
 7. " "
 8. " *sulphurata*.
 9. " *personata*.
 10. " "
 11. " "
 12. " *buchanani*.
 13. " "
 14. " *castaneiceps*.
 15. " "
 16. " *ciopsis*.
 17. " "
 18. *Fringillaria capensis*.
 19. " "
 20. " *insularis*.
 21. " "
 22. " *striolata*.

PLATE XII.

- Fig. 1. *Melophus melanicterus*.
 2. *Calcarius pictus*.
 3. *Rhynchophanes maccowni*.
 4. *Melophus melanicterus*.
 5. *Calcarius ornatus*.
 6. *Passerculus princeps*.
 7. *Poœcetes confinis*.
 8. *Passerculus alaudinus*.
 9. *Chondestes strigatus*.
 10. *Spizella arizonæ*.

- Fig. 11. *Poospiza melanoleuca*.
 12. *Spizella ochracea*.
 13. *Junco hyemalis*.
 14. *Spizella breweri*.
 15. *Coturniculus passerinus*.
 16. *Ammodromus caudacutus*.
 17. *Amphispiza belli*.
 18. *Ammodromus maritimus*.
 19. *Coturniculus passerinus*.
 20. *Amphispiza nevadensis*.
 21. *Plagiospiza superciliosa*.
 22. " "
 23. *Ammodromus maritimus*.

PLATE XIII.

- Fig. 1. *Cœreba flaveola*.
 2. *Phrygilus melanoderus*.
 3. " "
 4. *Cœreba atrata*.
 5. *Tanagra sayaca*.
 6. *Orchesticus abeillei*.
 7. *Lysurus castaneiceps*.
 8. *Tanagra sayaca*.
 9. *Dinca dinca*.
 10. *Sporothraupis auricrissa*.
 11. *Stephanophorus leucocephalus*.
 12. *Pyrrhura rubra*.
 13. *Trichothraupis melanops*.
 14. *Tachyphonus coronatus*.
 15. *Rhamphocelus brasilius*.
 16. *Diglossopsis cerulescens*.
 17. *Calospiza chrysophrys*.
 18. *Diglossa albilateralis*.
 19. *Euneornis campestris*.
 20. *Pyrrhuloxia jamaica*.

PLATE XIV.

- Fig. 1. *Diatropura progne*.
 2. *Coliostruthus ardens*.
 3. *Pyromelana franciscana*.
 4. *Urobrachya axillaris*.
 5. *Pyromelana taha*.
 6. " *capensis*.
 7. *Ploceipasser mahali*.
 8. *Pseudonigrita arnaudi*.
 9. *Othyphantes reichenowi*.
 10. *Sporopipes squamifrons*.
 11. *Quelea cardinalis*.
 12. *Sporopipes squamifrons*.
 13. *Sycobrotus gregalis*.
 14. *Heterhyphantes nigricollis*.
 15. " "
 16. *Hyphanturgus aurantius*.
 17. " "
 18. " *ocularius*.
 19. " "
 20. " "
 21. " *aurantius*.

PLATE XV.

- Fig. 1. *Sitagra auricapilla*.
 2. *Hyphantornis femininus*.
 3. " "
 4. *Sitagra uluensis*.
 5. " *bojeri*.
 6. " "
 7. " "
 8. " "

- Fig. 9. *Sitagra subaurea*.
 10. " "
 11. " *xanthoptera*.
 12. " "
 13. " *castanops*.
 14. " *galbula*.
 15. " "
 16. *Amblyospiza unicolor*.
 17. *Ploceëlla javanensis*.
 18. *Amblyospiza albifrons*.
 19. " "
 20. *Ploceëlla javanensis*.

PLATE XVI.

- Fig. 1. *Gymnostinops guatimozinus*.
 2. *Ostinops decumanus*.
 3. " "
 4. *Cacicus hæmorrhous*.
 5. *Amblycercus solitarius*.
 6. " "
 7. *Tangarius æneus*.
 8. *Cacicus vitellinus*.
 9. *Gymnostinops montezumæ*.
 10. *Cassiculus melanicterus*.
 11. *Molothrus rufo-axillaris*.
 12. " *cassini*.
 13. " *rufo-axillaris*.
 14. " *obscurus*.
 15. *Agelaius caurinus*.
 16. " *thilius*.
 17. " "
 18. *Molothrus obscurus*.

PLATE XVII.

- Fig. 1. *Agelaius flavus*.
 2. " "
 3. *Trupialis bellicosa*.
 4. *Leistes superciliaris*.
 5. " "
 6. *Pseudoleistes guirahuro*.
 7. *Agelaius ruficapillus*.
 8. *Curæus aterrimus*.
 9. *Pseudoleistes guirahuro*.
 10. *Trupialis defilippii*.
 11. " *militaris*.
 12. " "
 13. " *defilippii*.
 14. *Icterus cayanensis*.
 15. *Sturnella inexpectata*.
 16. " "
 17. *Icterus wagleri*.
 18. " *leucopteryx*.
 19. " *girandi*.
 20. " *mesomelas*.
 21. " *leucopteryx*.

PLATE XVIII.

- Fig. 1. *Holoquiscalus jamaicensis*.
 2. " "
 3. *Dives dives*.
 4. " "
 5. *Holoquiscalus luminosus*.
 6. " "
 7. " *fortirostris*.
 8. " "

- Fig. 9. *Megaquiscalus tenuirostris*.
 10. *Sarcops melanonotus*.
 11. „ *calvus*.
 12. *Aplonis kittlitzi*.
 13. *Eulabes intermedia*.
 14. „ *religiosa*.
 15. „ „
 16. *Aplonis brevirostris*.
 17. „ *vitiensis*.
 18. *Lamprocorax chalybea*.
 19. „ „
 20. *Hartlaubius auratus*.

PLATE XIX.

- Fig. 1. *Pyrrhochira caffa*.
 2. *Lamprocolius phoenicopterus*.
 3. „ „
 4. *Spreo bicolor*.
 5. *Creadion curunculatus*.
 6. *Spreo bivolor*.
 7. *Oriolus acrorhynchus*.
 8. „ *larvatus*.
 9. „ „
 10. „ „
 11. *Mimeta sagittata*.
 12. „ „
 13. „ *affinis*.
 14. „ „
 15. *Sphecotheres flaviventris*.
 16. „ „

PLATE XX.

- Fig. 1. *Dicrurus annectens*.
 2. " "
 3. " "
 4. *Dicruopsis bracteata*.
 5. " "
 6. *Buchanga atra*.
 7. " "
 8. *Dicruopsis borneensis*.
 9. *Buchanga assimilis*.
 10. " "
 11. *Chaptia aenea*.
 12. *Buchanga assimilis*.
 13. " "
 14. " *longicaulata*.
 15. " "
 16. " "
 17. " *cærulescens*.
 18. " *leucopygialis*.
 19. " "
 20. *Dissemuroides andamanensis*.
 21. *Bhringa remifer*.

PLATE XXI.

- Fig. 1. *Corvus hesperis*.
 2. " *pusillus*.
 3. " *hesperis*.
 4. *Heterocorax capensis*.
 5. " "
 6. *Trypanocorax pastinator*.
 7. " "
 8. *Corvus corone*.
 9. " *philippinus*.
 10. " "

PLATE XXII.

- Fig. 1. *Urocissa occipitalis*.
2. *Glaucopsis cinerea*.
3. *Urocissa occipitalis*.
4. *Dendrocitta rufa*.
5. " "
6. " "
7. " *cinerascens*.
8. *Picathartes oreas*.
9. *Strepera graculina*.
10. *Calocitta coliei*.
11. *Cyanopolijs japonicus*.
12. " "
13. *Cyanocorax caeruleus*.
14. *Cissolopha beecheyi*.
15. *Cyanocorax caeruleus*.

PASSERIFORMES INCURVATA

LIST OF THE CURRENT
NATURAL HISTORY PUBLICATIONS
OF THE TRUSTEES OF THE
BRITISH MUSEUM.

The following publications can be purchased through the Agency of *Messrs. LONGMANS & CO.*, 39, *Paternoster Row*, London, E.C.; *Mr. QUARITCH*, 11, *Grafton Street*, New Bond Street, W.; and *Messrs. DULAU & Co., Ltd.*, 37, *Soho Square*, W.; or at the NATURAL HISTORY MUSEUM, *Cromwell Road*, London, S.W.

The History of the Collections contained in the Natural History Departments of the British Museum :—

Vol. I. Libraries; Botany; Geology; Minerals.
Pp. xvii., 442. 1904, 8vo. 15s.

Vol. II. Separate historical accounts of the several collections included in the Department of Zoology.
Pp. 782. 1906, 8vo. 17. 10s.

Catalogue of the Books, Manuscripts, Maps, and Drawings in the British Museum (Natural History). Compiled by B. B. Woodward, Assistant in charge of the General Library, with some clerical assistance :—

Vol. I. A—D. Pp. viii., 500. 1903, 4to. 17.

Vol. II. E—K. Pp. 501–1038. 1904, 4to. 17.

Vol. III. L—O. Pp. 1039–1494. 1910, 4to. 17.

Catalogue of the Specimens and Drawings of Mammals, Birds, Reptiles, and Fishes of Nepal and Tibet. Presented by B. H. Hodgson, Esq., to the British Museum. 2nd edition. By John Edward Gray. Pp. xii., 90. [With an account of the Collection by Mr. Hodgson.] 1863, 12mo. 2s. 3d.

Report on the Zoological Collections made in the Indo-Pacific Ocean during the voyage of H.M.S. "Alert," 1881-2
Pp. xxv., 684. 54 Plates. 1884, 8vo. 1*l.* 10s.

Summary of the Voyage...	By Dr. R. W. Coppinger.
Mammalia	" O. Thomas.
Aves	" R. B. Sharpe.
Reptilia, Batrachia, Pisces	" A. Günther.
Mollusca	" E. A. Smith.
Echinodermata	" F. J. Bell.
Crustacea	" E. J. Miers.
Coleoptera	" C. O. Waterhouse.
Lepidoptera	" A. G. Butler.
Alcyonaria and Spongiida	" S. O. Ridley.

Report on the Collections of Natural History made in the Antarctic Regions during the Voyage of the "Southern Cross." Pp. ix., 344. 53 Plates. 1902, Royal 8vo. 2*l.*

Mammalia	By Capt. G. E. H. Barrett-Hamilton.
Notes on Antarctic Seals	" E. A. Wilson, M.B.
Extracts from the "Diary" }	—		
of the late Nicolai Hanson. }			
Aves	" Dr. R. Bowdler Sharpe.
Pisces	" G. A. Boulenger, F.R.S.
Tunicata	" Prof. W. A. Herdman, F.R.S.
Mollusca	" E. A. Smith.
Echinoderma	" Prof. F. J. Bell.
Insecta	" G. H. Carpenter and Hon. N. C. Rothschild.
Arachnida	" Dr. E. L. Trouessart.
Crustacea	" T. V. Hodgson.
Polychæta	" Dr. A. Willey.
Gephyrea	" A. E. Shipley.
Nematoda	" Dr. von Linstow.
Cestoda	
Polyzoa	" R. Kirkpatrick.
Porifera	
Anthozoa	" Dr. L. Roule and S. J. Hickson, F.R.S.
Actiniæ	" J. A. Clubb.
Hydrozoa	" E. T. Browne.
Cryptogamia	" A. Gepp, V. H. Blackman, and Miss E. S. Barton.
Rock Specimens	" Dr. G. T. Prior.

National Antarctic Expedition, 1901-1904. [*Discovery Report.*] Natural History:—

Vol. I. Geology (Field-Geology: Petrography). Pp. xii., 160: 10 plates, 72 text-figures, 2 maps. [*With Index.*] 1907, 4to. 1*l.* 10s.

Field-Geology	By H. T. Ferrar, M.A., F.G.S.
Rock-Specimens	" G. T. Prior, M.A., D.Sc., F.G.S.

Vol. II. Zoology (Vertebrata: Mollusca: Crustacea). Pp. xiv., 355: 33 plates (17 coloured), 146 text-figures, 1 map. 1907, 4to. 3*l.*

Mammalia (pp. 69: 5 pls. [3 col.], 36 figs.)	}	By E. A. Wilson, M.B.
Aves (pp. 121: 13 pls. col., 46 figs.)		
Anatomy of Penguins (pp. 28: 1 pl., 8 figs.)		
		" W. P. Pyecraft.

National Antarctic Expedition, 1901-1904—*continued*.Vol. II—*continued*.

Fishes (pp. 5 ; 2 pls.)	By G. A. Boulenger, F.R.S.
Cephalodiscus (pp. 67 : 7 pls. [1 col.], 17 figs.)			„ W. G. Ridewood, D.Sc.
Mollusca. I.—Cephalopoda (pp. 2 : 1 fig.)			„ W. E. Hoyle, D.Sc.
„ II.—Gastropoda { (pp. 12, 1 : 1 2 pls.) }			„ E. A. Smith, I.S.O.
„ III.—Amphineura {			
„ IV.—Nudibranchiata (pp. 28 : 1 pl., 30 figs.)			„ Sir Chas. Eliot, K.C.M.G., LL.D.
„ V.—Lamellibranchiata (pp. 7 : 1 pl.)			„ E. A. Smith, I.S.O.
Brachiopoda (pp. 2 : 4 figs.)	
Crustacea I.—Decapoda (pp. 7)		...	
„ II.—Cumacea (pp. 6 : 1 pl., 4 figs.)			„ W. T. Calman, D.Sc.

Vol. III. Zoology and Botany (Invertebrata : Marine Algæ, Musci). Pp. vi., 273 : 51 plates, 8 text-figures, and 1 chart. 1907, 4to. 2l. 10s.

On Collecting in Antarctic Seas (pp. 10)			By T. V. Hodgson, F.L.S.
Mollusca. VI.—Pteropoda (pp. 15 : 2 pls.)			„ Sir Charles Eliot, K.C.M.G., LL.D.
Crustacea. III.—Amphipoda (pp. 39 : 13 pls.)			„ A. O. Walker, F.L.S.
„ IV.—Leptostraca (pp. 2 : 2 figs.)			„ Dr. J. Thiele.
„ V.—Ostracoda (pp. 9 : 3 pls.)			„ Prof. G. S. Brady, F.R.S.
„ VI.—Cirripedia (pp. 4 : 1 pl.)			„ Prof. A. Gruvel.
Pycnogonida (pp. 72 : 10 pls.)	„ T. V. Hodgson, F.L.S.
Acari (pp. 6 : 1 pl.)	„ Dr. E. L. Trouessart.
Chætognatha (pp. 6 : 1 chart)	„ Dr. G. H. Fowler, F.L.S.
Nematoda (pp. 4 : 1 pl.)	„ Dr. O. von Linstow.
Cestoda (pp. 6 : 1 pl.)	„ A. E. Shipley, F.R.S.
Coelentera. I.—Alcyonaria (pp. 15 : 2 pls.)			„ Prof. S. J. Hickson, F.R.S.
„ II.—Hydroid Zoophytes (pp. 34 : 4 pls.)			„ Prof. S. J. Hickson, F.R.S., and F. H. Gravely.
„ III.—Tentacles of a Siphonophore (pp. 3 : 5 figs.)			„ Dr. J. Rennie.
Porifera. I.—Hexactinellida (pp. 25 : 7 pls.)			„ R. Kirkpatrick.
Marine Algæ. I.—Phæophyceæ and Floridææ (pp. 15 : 4 pls.)			„ A. Gepp and Mrs. E. S. Gepp.
„ „ II.—Corallinaceæ (pp. 2 : 1 fig.)			„ M. Foslie.
Musci (pp. 6 : 2 pls.)	„ J. Cardot.

Vol. IV. Zoology (various Invertebrata). Pp. iv., 281 : 65 plates, 1 text-figure. 1908, 4to. 1l. 15s.

Mollusca. VII.—Solenogastres (pp. 13 : 2 pls.)			By Dr. H. F. Nierstrasz.
Insecta.—Aptera (pp. 5 : 1 pl.)	...		„ G. H. Carpenter, B.Sc., M.R.I.A.
Crustacea. VII.—Schizopoda (pp. 42 : 8 pls.)			„ W. M. Tattersall, M.Sc.
„ VIII.—Copepoda (pp. 44 : 7 pls.)			„ R. Norris Wolfenden, M.D.

National Antarctic Expedition, 1901-1904—*continued*.

Vol. IV—continued.

| Nemertinea (pp. 15 : 1 pl., 16 text-figures) | „ | Prof. L. Joubin. |
| Cœlentera. V.—Medusæ (pp. 62 : 7 pls.) | „ | Edward T. Browne. |
| Lichenes (pp. 11 : 1 pl.)... .. | „ | Dr. O. V. Darbishire. |

A Monograph of Christmas Island (Indian Ocean): Physical Features and Geology by C. W. Andrews, B.A., B.Sc., F.G.S., with descriptions of the Fauna and Flora by numerous contributors. Pp. xv., 337: 22 plates (7 coloured), a map, and 27 illustrations in text. [With Index.] 1900, 8vo. 17.

First Report on Economic Zoology. By Fred. V. Theobald, M.A., &c. [With an Introduction, containing a Classification of Animals from the point of view of Economic Zoology, by Prof. E. Ray Lankester, LL.D., F.R.S.] Pp. xxxiv., 192. 18 Woodcuts. 1903, Roy. 8vo. 6s.

Second Report on Economic Zoology. By Fred. V. Theobald, M.A., &c. Pp. x., 197. 29 Illustrations. 1904, Roy. 8vo. 6s.

MAMMALS.

Catalogue of the Bones of Mammalia in the Collection of the British Museum. By Edward Gerrard. Pp. iv., 296
1862, 8vo. 5s.

Catalogue of Monkeys, Lemurs, and Fruit-eating Bats in the Collection of the British Museum. By Dr. J. E. Gray, F.R.S., &c. Pp. viii., 137. 21 Woodcuts. 1870, 8vo. 4s.

Catalogue of Carnivorous Pachydermatous, and Edentate Mammalia in the British Museum. By John Edward Gray, F.R.S., &c. Pp. vii., 398. 47 Woodcuts. 1869, 8vo. 6s. 6d.

Catalogue of Seals and Whales in the British Museum. By John Edward Gray, F.R.S., &c. 2nd Edition. Pp. vii., 402. 101 Woodcuts. 1866, 8vo. 8s.

———Supplement. By John Edward Gray, F.R.S., &c.. Pp. vi., 103. 11 Woodcuts. 1871, 8vo. 2s. 6d.

Catalogue of Ruminant Mammalia (*Pecora*, Linnæus) in the British Museum. By John Edward Gray, F.R.S., &c. Pp. viii., 102. 4 Plates. 1872, 8vo. 3s. 6d.

Monograph of the Okapi. By Sir E. Ray Lankester, K.C.B., M.A., D.Sc., F.R.S., &c. Atlas. Compiled with the assistance of W. G. Ridewood, D.Sc. 48 Plates, with xxii. pp. of Explanations, &c. 1910, 4to. 1l. 5s.

Catalogue of the Marsupialia and Monotremata in the Collection of the British Museum. By Oldfield Thomas. Pp. xiii., 401. 4 Coloured and 24 plain Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 1l. 8s.

BIRDS.

Catalogue of the Birds in the British Museum :—

Vol. VII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cichlomorphæ* : Part IV., containing the concluding portion of the family Timeliidæ (Babbling Thrushes). By R. Bowdler Sharpe. Pp. xvi., 698. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1883, 8vo. 1l. 6s.

Vol. VIII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cichlomorphæ* : Part V., containing the families Paridæ and Laniidæ (Titmice and Shrikes); and *Certhiomorphæ* (Creepers and Nuthatches). By Hans Gadow, M.A., Ph.D. Pp. xiii., 386. Woodcuts and 9 coloured Plates. [With Systematic and Alphabetical Indexes.] 1883, 8vo. 17s.

Vol. X. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes* : Part I., containing the families Dicæidæ, Hirundinidæ, Ampelidæ, Mniotiltidæ, and Motacillidæ. By R. Bowdler Sharpe. Pp. xiii., 682. Woodcuts and 12 coloured Plates. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 1l. 2s.

Vol. XI. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes* : Part II., containing the families

Catalogue of the Birds in the British Museum—*continued*

Cœrebidæ, Tanagridæ, and Icteridæ. By Philip Lutley Selater, M.A., F.R.S. Pp. xvii., 431. Woodcuts and 18 coloured Plates. [With Systematic and Alphabetical Indexes.] 1886, 8vo. 1*l.*

Vol. XII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes*: Part III., containing the family Fringillidæ. By R. Bowdler Sharpe. Pp. xv., 871. Woodcuts and 16 coloured Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 1*l.* 8*s.*

Vol. XIII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Sturniformes*, containing the families Artamidæ, Sturnidæ, Ploceidæ, and Alaudidæ. Also the families Atrichiidæ and Menuridæ. By R. Bowdler Sharpe. Pp. xvi., 701. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 1*l.* 8*s.*

Vol. XIV. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Oligomyodæ*, or the families Tyrannidæ, Oxyrhamphidæ, Pipridæ, Cotingidæ, Phytotomidæ, Philepittidæ, Pittidæ, Xenicidæ, and Eurylæmidæ. By Philip Lutley Selater, M.A., F.R.S. Pp. xix., 494. Woodcuts and 26 coloured Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 1*l.* 4*s.*

Vol. XV. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Tracheophonæ*, or the families Dendrocolaptidæ, Formicariidæ, Conopophagidæ, and Pteroptochidæ. By Philip Lutley Selater, M.A., F.R.S. Pp. xvii., 371. Woodcuts and 20 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 1*l.*

Vol. XVI. Catalogue of the Picariæ in the Collection of the British Museum. *Upupæ* and *Trochili*, by Osbert Salvin. *Coraciæ*, of the families Cypselidæ, Caprimulgidæ, Podargidæ, and Steatornithidæ, by Ernst Hartert. Pp. xvi., 703. Woodcuts and 14 coloured Plates. [With Systematic and Alphabetical Indexes.] 1892, 8vo. 1*l.* 16*s.*

Vol. XVII. Catalogue of the Picariæ in the Collection of the British Museum. *Coraciæ* (contin.) and *Halcyones*, with the families Leptosomatidæ, Coraciidæ, Meropidæ, Alcedinidæ, Momotidæ, Totidæ and Coliidæ, by R. Bowdler Sharpe. *Bucerotes* and *Trogones*, by W. R. Ogilvie Grant. Pp. xi., 522. Woodcuts and 17 coloured Plates. [With Systematic and Alphabetical Indexes.] 1892, 8vo. 1*l.* 10*s.*

Catalogue of the Birds in the British Museum—*continued*.

- Vol. XVIII. Catalogue of the Picariæ in the Collection of the British Museum. *Scansores*, containing the family Picidæ. By Edward Hargitt. Pp. xv., 597. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 1*l.* 6*s.*
- Vol. XIX. Catalogue of the Picariæ in the Collection of the British Museum. *Scansores* and *Coccyges*: containing the families Rhamphastidæ, Galbulidæ, and Bucconidæ, by P. L. Selater; and the families Indicatoridæ, Capitonidæ, Cuculidæ, and Musophagidæ, by G. E. Shelley. Pp. xii., 484: 13 coloured Plates. [With Systematic and Alphabetical Indexes.] 1891, 8vo. 1*l.* 5*s.*
- Vol. XX. Catalogue of the Psittaci, or Parrots, in the Collection of the British Museum. By T. Salvadori. Pp. xvii., 658. Woodcuts and 18 coloured Plates. [With Systematic and Alphabetical Indexes.] 1891, 8vo. 1*l.* 10*s.*
- Vol. XXI. Catalogue of the Columbæ, or Pigeons, in the Collection of the British Museum. By T. Salvadori. Pp. xvii., 676. 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1893, 8vo. 1*l.* 10*s.*
- Vol. XXII. Catalogue of the Game Birds (*Pterocletes*, *Gallinæ*, *Opisthocomi*, *Hemipodii*) in the Collection of the British Museum. By W. R. Ogilvie Grant. Pp. xvi., 585. 8 coloured Plates. [With Systematic and Alphabetical Indexes.] 1893, 8vo. 1*l.* 6*s.*
- Vol. XXIII. Catalogue of the Fulicariæ (Rallidæ and Heliornithidæ) and Alectorides (Aramidæ, Eurypygidæ, Mesitidæ, Rhinocetidæ, Gruidæ, Psophiidæ, and Otididæ) in the Collection of the British Museum. By R. Bowdler Sharpe. Pp. xiii., 353. 9 coloured Plates. [With Systematic and Alphabetical Indexes.] 1894, 8vo. 1*l.*
- Vol. XXIV. Catalogue of the Limicolæ in the Collection of the British Museum. By R. Bowdler Sharpe. Pp. xii., 794. Woodcuts and 7 coloured Plates. [With Systematic and Alphabetical Indexes.] 1896, 8vo. 1*l.* 5*s.*
- Vol. XXV. Catalogue of the Gaviæ and Tubinares in the Collection of the British Museum. Gaviæ (Terns, Gulls, and Skuas), by Howard Saunders. Tubinares (Petrels and Albatrosses), by Osbert Salvin. Pp. xv., 475. Woodcuts and 8 coloured Plates. [With Systematic and Alphabetical Indexes.] 1896, 8vo. 1*l.* 1*s.*

Catalogue of the Birds in the British Museum—*continued*.

Vol. XXVI. Catalogue of the Plataleæ, Herodiones, Steganopodes, Pygopodes, Alcæ, and Impennes in the Collection of the British Museum. Plataleæ (Ibises and Spoonbills) and Herodiones (Hérons and Storks), by R. Bowdler Sharpe. Steganopodes (Cormorants, Gannets, Frigate-birds, Tropic-birds, and Pelicans), Pygopodes (Divers and Grebes), Alcæ (Auks), and Impennes (Penguins), by W. R. Ogilvie-Grant. Pp. xvii., 687. Woodcuts and 14 coloured Plates. [With Systematic and Alphabetical Indexes.] 1898, 8vo. 1*l.* 5*s.*

Vol. XXVII. Catalogue of the Chenomorphæ (Palamedeæ, Phoenicopteri, Anseres), Crypturi, and Ratitæ in the Collection of the British Museum. By T. Salvadori. Pp. xv., 636. 19 coloured Plates. [With Systematic and Alphabetical Indexes.] 1895, 8vo. 1*l.* 12*s.*

A Hand-list of the Genera and Species of Birds. [Nomenclator Avium tum Fossilium tum Viventium.] By R. Bowdler Sharpe, LL.D. :—

Vol. IV. Pp. xii., 391. [With Systematic and Alphabetical Indexes.] 1903, 8vo. 10*s.*

Vol. V. Pp. xx., 678. [With Systematic and Alphabetical Indexes.] 1909, 8vo. 1*l.*

List of the Specimens of Birds in the Collection of the British Museum. By George Robert Gray :—

Part III., Sections III. and IV. Capitonidæ and Picidæ. Pp. 137. [With Index.] 1868, 12mo. 1*s.* 6*d.*

Part IV. Columbæ. Pp. 73. [With Index.] 1856, 12mo. 1*s.* 9*d.*

Part V. Gallinæ. Pp. iv., 120. [With an Alphabetical Index.] 1867, 12mo. 1*s.* 6*d.*

Catalogue of the Birds of the Tropical Islands of the Pacific Ocean in the Collection of the British Museum. By George Robert Gray, F.L.S., &c. Pp. 72. [With an Alphabetical Index.] 1859, 8vo. 1*s.* 6*d.*

Catalogue of the Collection of Birds' Eggs in the British Museum (Natural History) :—

Vol. I. Ratitæ. Carinatæ (Tinamiformes—Lariformes). By Eugene W. Oates. Pp. xxiii., 252. 18 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1901, 8vo. 1l. 10s.

Vol. II. Carinatæ (Charadriiformes—Strigiformes). By Eugene W. Oates. Pp. xx., 400. 15 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1902, 8vo. 1l. 10s.

Vol. III. Carinatæ (Psittaciformes — Passeriformes) By Eugene W. Oates and Capt. Savile G. Reid. Pp. xxiii., 349. 10 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1903, 8vo. 1l. 5s.

Vol. IV. Carinatæ (Passeriformes continued). By Eugene W. Oates, assisted by Capt. Savile G. Reid. Pp. xviii., 352. 14 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1905, 8vo. 1l. 10s.

REPTILES.

Catalogue of the Tortoises, Crocodiles, and Amphisbænians in the Collection of the British Museum. By Dr. J. E. Gray, F.R.S., &c. Pp. viii., 80. [With an Alphabetical Index.] 1844, 12mo. 1s.

Catalogue of Shield Reptiles in the Collection of the British Museum. By John Edward Gray, F.R.S., &c.:—

Appendix. Pp. 28. 1872, 4to. 2s. 6d.

Part II. Emydosaurians, Rhynchocephalia, and Amphisbænians. Pp. vi., 41. 25 Woodcuts. 1872, 4to. 3s. 6d.

Hand-List of the Specimens of Shield Reptiles in the British Museum. By Dr. J. E. Gray, F.R.S., F.L.S., &c. Pp. iv., 124. [With an Alphabetical Index.] 1873, 8vo. 4s.

Catalogue of the Chelonians, Rhynchocephalians, and Crocodiles in the British Museum (Natural History). New Edition. By George Albert Boulenger. Pp. x., 311. 73 Woodcuts and 6 Plates. [With Systematic and Alphabetical Indexes.] 1889, 8vo. 15s.

Catalogue of the Lizards in the British Museum (Natural History). Second Edition. By George Albert Boulenger :—

Vol. II. Iguanidæ, Xenosauridæ, Zonuridæ, Anguidæ, Anniellidæ, Helodermatidæ, Varanidæ, Xantusiidæ, Teiidæ, Amphisbænidæ. Pp. xiii., 497. 24 Plates. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 1*l.*

Vol. III. Lacertidæ, Gerrhosauridæ, Scincidæ, Anelytropidæ, Dibamidæ, Chamæleontidæ. Pp. xii., 575. 40 Plates. [With a Systematic Index and an Alphabetical Index to the three volumes.] 1887, 8vo. 1*l.* 6*s.*

Catalogue of the Snakes in the British Museum (Natural History). By George Albert Boulenger, F.R.S., &c. :—

Vol. I., containing the families Typhlopidae, Glauconiidae, Boidæ, Ilysiidæ, Uropeltidæ, Xenopeltidæ, and Colubridæ aglyphæ (part). Pp. xiii., 448 : 26 Woodcuts and 28 Plates. [With Systematic and Alphabetical Indexes.] 1893, 8vo. 1*l.* 1*s.*

Vol. II., containing the conclusion of the Colubridæ aglyphæ. Pp. xi., 382 : 25 Woodcuts and 20 Plates. [With Systematic and Alphabetical Indexes.] 1894, 8vo. 17*s.* 6*d.*

Vol. III., containing the Colubridæ (Opisthoglyphæ and Proteroglyphæ), Amblycephalidæ, and Viperidæ. Pp. xiv., 727 : 37 Woodcuts and 25 Plates. [With Systematic Index, and Alphabetical Index to the 3 volumes.] 1896; 8vo. 1*l.* 6*s.*

Catalogue of Colubrine Snakes in the Collection of the British Museum. By Dr. Albert Günther. Pp. xvi., 281. [With Geographic, Systematic, and Alphabetical Indexes.] 1858, 12mo. 4*s.*

BATRACHIANS.

Catalogue of the Batrachia Salientia in the Collection of the British Museum. By Dr. Albert Günther. Pp. xvi., 160. 12 Plates. [With Systematic, Geographic, and Alphabetical Indexes.] 1858, 8vo. 6*s.*

FISHES.

Catalogue of the Fishes in the British Museum. Second Edition. Vol. I. Catalogue of the Perciform Fishes in the British Museum. Vol. I. Containing the Centrarchidæ,

Catalogue of the Fishes in the British Museum—*continued*

Percidæ, and Serranidæ (part). By George Albert Boulenger, F.R.S. Pp. xix., 394. Woodcuts and 15 Plates. [With Systematic and Alphabetical Indexes.] 1895, 8vo. 15s.

Catalogue of Lophobranchiate Fish in the Collection of the British Museum. By J. J. Kaup, Ph.D., &c. Pp. iv., 80. 4 Plates. [With an Alphabetical Index.] 1856, 12mo. 2s.

Catalogue of the Fresh-water Fishes of Africa in the British Museum (Natural History). By G. A. Boulenger, F.R.S. :—

Vol. I. Pp. xi., 373 : 270 text-figures. [With Systematic and Alphabetical Indexes.] 1909, imp. 8vo. 1l. 12s. 6d.

Vol. II. Pp. xii., 529 : 382 text-figures. [With Systematic and Alphabetical Indexes.] 1911, imp. 8vo. 2l. 5s.

MOLLUSCA.

Guide to the Systematic Distribution of Mollusca in the British Museum. Part I. By John Edward Gray, Ph.D., F.R.S., &c. Pp. xii., 230. 121 Woodcuts. 1857, 8vo. 5s.

Catalogue of Pulmonata, or Air Breathing Mollusca, in the Collection of the British Museum. Part I. By Dr. Louis Pfeiffer. Pp. iv., 192. Woodcuts. 1855, 12mo. 2s. 6d.

Catalogue of the Auriculidæ, Proserpinidæ, and Truncatellidæ in the Collection of the British Museum. By Dr. Louis Pfeiffer. Pp. iv., 150. Woodcuts. 1857, 12mo. 1s. 9d.

List of the Mollusca in the Collection of the British Museum. By John Edward Gray, Ph.D., F.R.S., &c. :—

Part II. Olividæ. Pp. 41. 1865, 12mo. 1s.

Catalogue of the Conchifera, or Bivalve Shells, in the Collection of the British Museum. By M. Deshayes :—

Part I. Veneridæ, Cyprinidæ, Glauconomidæ, and Petricoladæ. Pp. iv., 216. 1853, 12mo. 3s.

Part II. Petricoladæ (concluded); Corbiculadæ. Pp. 217–292. [With an Alphabetical Index to the two parts.] 1854, 12mo. 6d.

BRACHIOPODA.

Catalogue of Brachiopoda Ancylopoda or Lamp Shells in the Collection of the British Museum. [*Issued as "Catalogue of the Mollusca, Part IV."*] Pp. iv., 128. 25 Woodcuts. [With an Alphabetical Index.] 1853, 12mo. 3s.

POLYZOA.

Catalogue of Marine Polyzoa in the Collection of the British Museum. Part III. Cyclostamata. By George Busk, F.R.S. Pp. viii., 39. 38 plates. [With a Systematic Index]. 1875, 8vo. 5s.

CRUSTACEA.

Catalogue of the Specimens of Amphipodous Crustacea in the Collection of the British Museum. By C. Spence Bate, F.R.S., &c. Pp. iv., 399. 58 Plates. [With an Alphabetical Index.] 1862, 8vo. 1*l*. 5s.

ARACHNIDA.

Descriptive Catalogue of the Spiders of Burma, based upon the Collection made by Eugene W. Oates and preserved in the British Museum. By T. Thorell. Pp. xxxvi., 406. [With Systematic List and Alphabetical Index.] 1895, 8vo. 10s. 6*d*.

INSECTS.

Coleopterous Insects.

Nomenclature of Coleopterous Insects in the Collection of the British Museum :—

Part VII. Longicornia, I. By Adam White. Pp. iv., 174. 4 Plates. 1853, 12mo. 2s. 6*d*.

Part VIII. Longicornia, II. By Adam White. Pp. 237. 6 Plates. 1855, 12mo. 3s. 6*d*.

Illustrations of Typical Specimens of Coleoptera in the Collection of the British Museum. Part I. Lycidæ. By Charles Owen Waterhouse. Pp. x., 83. 18 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1879, 8vo. 16s.

Catalogue of the Coleopterous Insects of Madeira in the Collection of the British Museum. By T. Vernon Wollaston, M.A., F.L.S. Pp. xvi., 234 : 1 Plate. [With a Topographical Catalogue and an Alphabetical Index.] 1857, 8vo. 3s.

Catalogue of the Coleopterous Insects of the Canaries in the Collection of the British Museum. By T. Vernon Wollaston, M.A., F.L.S. Pp. xiii., 648. [With Topographical and Alphabetical Indexes.] 1864, 8vo. 10s. 6d.

Catalogue of Halticidæ in the Collection of the British Museum. By the Rev. Hamlet Clark, M.A., F.L.S. Physapodes and Œdipodes. Part I. Pp. xii., 301. Frontispiece and 9 Plates. 1860, 8vo. 7s.

Catalogue of Hispidæ in the Collection of the British Museum. By Joseph S. Baly, M.E.S., &c. Part I. Pp. x., 172. 9 Plates. [With an Alphabetical Index.] 1858, 8vo. 6s.

Hymenopterous Insects.

Catalogue of Hymenopterous Insects in the Collection of the British Museum. By Frederick Smith. 12mo. :—

Part II. Apidæ. Pp. 199–465. 6 Plates. [With an Alphabetical Index.] 1854. 6s.

Part III. Mutillidæ and Pompilidæ. Pp. 206. 6 Plates 1855. 6s.

Part IV. Sphegidæ, Larridæ, and Crabronidæ. Pp. 207–497. 6 Plates. [With an Alphabetical Index.] 1856. 6s.

Part V. Vespidæ. Pp. 147. 6 Plates. [With an Alphabetical Index.] 1857. 6s.

Part VI. Formicidæ. Pp. 216. 14 Plates. [With an Alphabetical Index.] 1858. 6s.

Part VII. Dorylidæ and Thynnidæ. Pp. 76. 3 Plates. [With an Alphabetical Index.] 1859. 2s.

List of Hymenoptera, with descriptions and figures of the Typical Specimens in the British Museum. Vol. I., Tenthredinidæ and Siricidæ. By W. F. Kirby. Pp. xxviii., 450. 16 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1882, 8vo. 1l. 18s.

Dipterous Insects.

A Monograph of the Culicidæ, or Mosquitoes. Mainly compiled from the Collections received at the British Museum from various parts of the world in connection with the

Investigation into the cause of Malaria conducted by the Colonial Office and the Royal Society. By Fred. V. Theobald, M.A., &c. :—

Vol. III. Pp. xvii., 359 : 17 plates, 1 diagram, and 193 illustrations in text. 1903, 8vo. 1*l.* 1*s.*

Vol. IV. Pp. xix., 639 : 16 plates and 297 text-figures. [With Index.] 1907, 8vo. 1*l.* 12*s.* 6*d.*

Vol. V. Pp. xv., 646 : 6 plates and 261 text-figures. [With Index.] 1910, 8vo. 1*l.* 5*s.*

Handbook of the Tsetse-Flies [Genus *Glossina*]. By Ernest Edward Austen. With 10 coloured plates and 24 text-figures, by A. J. Engel Terzi, and 1 map. Pp. x., 110. [With Index.] 1911, roy. 8vo. 5*s.* 6*d.*

Illustrations of African Blood-sucking Flies other than Mosquitoes and Tsetse-Flies. By Ernest Edward Austen, with coloured figures by Grace Edwards. Pp. xv., 221 : 13 coloured plates, 3 text-figures. 1909, roy. 8vo. 1*l.* 7*s.* 6*d.*

Lepidopterous Insects.

Catalogue of the Lepidoptera Phalænæ in the British Museum. By Sir George F. Hampson, Bart. :—

Vol. I. Catalogue of the Syntomidæ in the Collection of the British Museum. Pp. xxi., 559 : 285 woodcuts. [With Systematic and Alphabetical Indexes.] 1898, 8vo. 15*s.*

—Atlas of 17 Coloured Plates, 8vo. 15*s.*

Vol. II. Catalogue of the Arctiadæ (Nolinæ, Lithosianæ) in the Collection of the British Museum. Pp. xx., 589 : 411 woodcuts. [With Systematic and Alphabetical Indexes.] 1900, 8vo. 18*s.*

—Atlas of 18 Coloured Plates (xviii.—xxxv.), 8vo. 15*s.*

Vol. III. Catalogue of the Arctiadæ (Arctianæ) and Agaristidæ in the Collection of the British Museum. Pp. xix., 690 : 294 woodcuts. [With Systematic and Alphabetical Indexes.] 1901, 8vo. 15*s.*

—Atlas of 19 Coloured Plates (xxxvi.—liv.), 8vo. 16*s.*

Vol. IV. Catalogue of the Noctuidæ [Agrotinæ]. Pp. xx., 689 : 125 woodcuts. [With Systematic and Alphabetical Indexes.] 1903, 8vo. 15*s.*

—Atlas of 23 Coloured Plates (lv.—lxxvii.), 8vo. 16*s.*

Vol. V. Catalogue of the Noctuidæ [Hadeninæ]. Pp. xvi., 634 : 172 woodcuts. [With Systematic and Alphabetical Indexes.] 1905, 8vo. 15*s.*

—Atlas of 18 Coloured Plates (lxxviii.—xcv.), 8vo. 15*s.*

Catalogue of Lepidoptera Phalænæ—*continued*.

Vol. VI. Catalogue of the Noctuidæ [Cucullianæ]. Pp. xiv., 532 : 172 woodcuts. [With Systematic and Alphabetical Indexes.] 1906, 8vo. 15s.

—Atlas of 12 Coloured Plates (xcvi.—cvii.), 8vo. 10s.

Vol. VII. Catalogue of the Noctuidæ [Acronyctinæ]. Pp. xv., 709 : 184 woodcuts. [With Systematic and Alphabetical Indexes.] 1908, 8vo. 17s.

—Atlas of 15 Coloured Plates (cviii.—cxxii.), 8vo. 13s.

Vol. VIII. Catalogue of the Noctuidæ [Acronyctinæ, II.]. Pp. xiv., 583 : 162 woodcuts. [With Table of the Phylogeny of the Acronyctinæ, and Systematic and Alphabetical Indexes.] 1909, 8vo. 15s.

—Atlas of 14 Coloured Plates (cxxiii.—cxxxvi.), 8vo. 12s.

Vol. IX. Catalogue of the Noctuidæ [Acronyctinæ, III.]. Pp. xv., 552 : 247 woodcuts. [With Table of the Phylogeny of the Acronyctinæ, and Systematic and Alphabetical Indexes.] 1910, 8vo. 15s.

—Atlas of 11 Coloured Plates (cxxxvii.—cxlvi.), 8vo. 12s.

Vol. X. Catalogue of the Noctuidæ [Erastrianæ]. Pp. xix., 829 : 214 woodcuts. [With Table of the Phylogeny of the Erastrianæ, and Systematic and Alphabetical Indexes.] 1910, 8vo. 1*l*.

—Atlas of 26 Coloured Plates (cxlviii.—clxxiii.). 1911, 8vo. 1*l*.

Illustrations of Typical Specimens of Lepidoptera Heterocera in the Collection of the British Museum :—

Part V. By Arthur Gardiner Butler. Pp. xii., 74. 78–100 Coloured Plates. [With a Systematic Index.] 1881, 4to. 2*l*. 10s.

Part VI. By Arthur Gardiner Butler. Pp. xv., 89. 101–120 Coloured Plates. [With a Systematic Index.] 1886, 4to. 2*l*. 4s.

Part VII. By Arthur Gardiner Butler. Pp. iv., 124. 121–138 Coloured Plates. [With a Systematic List.] 1889, 4to. 2*l*.

Part VIII. The Lepidoptera Heterocera of the Nilgiri District. By George Francis Hampson. Pp. iv., 144. 139–156 Coloured Plates. [With a Systematic List.] 1891, 4to. 2*l*.

Part IX. The Macrolepidoptera Heterocera of Ceylon. By George Francis Hampson. Pp. v., 182. 157–176 Coloured Plates. [With a General Systematic List of Species collected in, or recorded from, Ceylon.] 1893, 4to. 2*l*. 2s.

Catalogue of the Collection of Palæarctic Butterflies formed by the late John Henry Leech, and presented to the Trustees of the British Museum by his Mother, Mrs. Eliza Leech. By Richard South, F.E.S. Pp. vi., 228. 2 Coloured Plates. With a Portrait and Biographical Memoir of Mr. Leech. 1902, 4to. 1*l*.

Catalogue of Diurnal Lepidoptera described by Fabricius in the Collection of the British Museum. By Arthur Gardiner Butler, F.L.S., &c. Pp. iv., 303. 3 Plates. 1869, 8vo. 7*s*. 6*d*.

List of the Specimens of Lepidopterous Insects in the Collection of the British Museum. By Francis Walker. 12mo. :—

Part XXV. ————— Pp. 1281–1477. 1862. 3*s*.

Part XXVIII. Tortricites and Tineites. Pp. 287–561. 1863. 4*s*.

Part XXXI. Supplement. Pp. 1–321. 1864. 5*s*.

Part XXXIII. ————— Part 3. Pp. 707–1120. 1865. 6*s*.

Neuropterous Insects.

Catalogue of the Specimens of Neuropterous Insects in the Collection of the British Museum. By Dr. H. Hagen. Part I. Termitina. Pp. 34. 1858, 12mo. 6*d*.

Orthopterous Insects.

Catalogue of Orthopterous Insects in the Collection of the British Museum. Part I. Phasmidæ. By John Obadiah Westwood, F.L.S., &c. Pp. 195. 48 Plates. [With an Alphabetical Index.] 1859, 4to. 3*l*.

Catalogue of the Specimens of Blattariæ in the Collection of the British Museum. By Francis Walker, F.L.S., &c. Pp. 239. [With an Alphabetical Index.] 1868, 8vo. 5*s*. 6*d*.

Catalogue of the Specimens of Dermaptera Saltatoria in the Collection of the British Museum. By Francis Walker, F.L.S., &c. :—

Part II. Locustidæ (continued). Pp. 225–423. [With an Alphabetical Index.] 1869, 8vo. 4s. 6d.

Part III. Locustidæ (continued).—Acrididæ. Pp. 425–604. [With an Alphabetical Index.] 1870, 8vo. 4s.

Part IV. Acrididæ (continued). Pp. 605–809. [With an Alphabetical Index.] 1870, 8vo. 6s.

Part V. Tettigidæ.—Supplement to the Catalogue of Blattariæ.—Supplement to the Catalogue of Dermaptera Saltatoria (with remarks on the Geographical Distribution of Dermaptera). Pp. 811–850; 43; 116. [With Alphabetical Indexes.] 1870, 8vo. 6s.

Synonymic Catalogue of Orthoptera. By W. F. Kirby :—

Vol. I. Orthoptera Euplexoptera, Cursoria, et Gressoria. (Forficulidæ, Hemimeridæ, Blattidæ, Mantidæ, Phasmidæ.) Pp. x., 501. [With Index.] 1904, 8vo. 10s.

Vol. II. Orthoptera Saltatoria, Part I. (Achetidæ et Phasgonuridæ.) Pp. viii., 562. [With Index.] 1906, 8vo. 15s.

Vol. III. Orthoptera Saltatoria, Part II. (Locustidæ vel Acridiidæ.) Pp. vii., 674. [With Index.] 1910, 8vo. 1l.

Hemipterous Insects.

Catalogue of the Specimens of Heteropterous Hemiptera in the Collection of the British Museum. By Francis Walker, F.L.S., &c. 8vo. :—

Part VI. Pp. 210. [With Alphabetical Index.] 1873. 5s.

Part VII. Pp. 213. [With Alphabetical Index.] 1873. 6s.

Homopterous Insects.

A Synonymic Catalogue of Homoptera. Part I. Cicadidæ. By W. L. Distant. Pp. 207. [Index.] 1906, 8vo. 5s.

VERMES.

Catalogue of the Species of Entozoa, or Intestinal Worms, contained in the Collection of the British Museum. By Dr. Baird. Pp. iv., 132. 2 Plates. [With an Index of the Animals in which the Entozoa mentioned in the Catalogue are found, and an Index of Genera and Species.] 1853, 12mo. 2s.

ANTHOZOA.

Catalogue of Sea-pens or Pennatulariidæ in the Collection of the British Museum. By J. E. Gray, F.R.S., &c. Pp. iv., 40. 2 Woodcuts. 1870, 8vo. 1s. 6d.

Catalogue of Lithophytes or Stony Corals in the Collection of the British Museum. By J. E. Gray, F.R.S., &c. Pp. iv., 51. 14 Woodcuts. 1870, 8vo. 3s.

Catalogue of the Madreporarian Corals in the British Museum (Natural History):—

Vol. I. The Genus *Madrepora*. By George Brook. Pp. xi., 212. 35 Collotype Plates. [With Systematic and Alphabetical Indexes, and Explanation of the Plates.] 1893, 4to. 1l. 4s.

Vol. II. The Genus *Turbinaria*; the Genus *Astræopora*. By Henry M. Bernard, M.A. Cantab., F.L.S., F.Z.S. Pp. iv., 106. 30 Collotype and 3 Lithographic Plates. [With Index of Generic and Specific Names, and Explanation of the Plates.] 1896, 4to. 18s.

Vol. III. The Genus *Montipora*; the Genus *Anacropora*. By Henry M. Bernard, M.A., &c. Pp. vii., 192. 30 Collotype and 4 Lithographic Plates. [With Systematic Index, Index of Generic and Specific Names, and Explanation of the Plates.] 1897, 4to. 1l. 4s.

Vol. IV. The Family Poritidæ. I.—The Genus *Goniopora*. By Henry M. Bernard, M.A. Pp. viii., 206. 12 Collotype and 4 Lithographic Plates. [With Index of Generic and Specific Names, and Explanation of the Plates.] 1903, 4to. 1l.

Vol. V. The Family Poritidæ. II.—The Genus *Porites*. Part I.—*Porites* of the Indo-Pacific Region. By Henry M. Bernard, M.A. Pp. vi., 303. 35 Plates. [With Index of Generic and Specific Names and Explanation of the Plates.] 1905, 4to. 1l. 15s.

Vol. VI. The Family Poritidæ. II.—The Genus *Porites*. Part II.—*Porites* of the Atlantic and West Indies, with the European Fossil Forms. The Genus *Goniopora*, a supplement to Vol. IV. By Henry M. Bernard, M.A. Pp. vi., 173. 16 Collotype and 1 Lithographic Plates. [With Index of Generic and Specific Names, and Explanation of the Plates.] 1906, 4to. 1l.

BRITISH ANIMALS.

Catalogue of British Birds in the Collection of the British Museum. By George Robert Gray, F.L.S., F.Z.S., &c. Pp. xii., 248. [With a List of Species.] 1863, 8vo. 3s. 6d.

Catalogue of British Hymenoptera in the Collection of the British Museum. Second edition. Part I. Andrenide and Apidæ. By Frederick Smith, M.E.S. New issue Pp. xi. 236. 11 Plates. [With Systematic and Alphabetical Index.] 1891, 8vo. 6s.

Catalogue of British Fossorial Hymenoptera, Formicidæ, and Vespidæ in the Collection of the British Museum. By Frederick Smith, V.P.E.S. Pp. 236. 6 Plates. [With an Alphabetical Index.] 1858, 12mo. 6s.

Catalogue of British Hymenoptera of the Family Chalcididæ. By Claude Morley, F.Z.S., F.E.S. Pp. 74. [Index.] 1910, 8vo. 3s. 6d.

Illustrations of British Blood-sucking Flies, with notes by Ernest Edward Austen, Assistant, Department of Zoology, British Museum (N.H.). Pp. 74. 34 Coloured Plates. 1906, roy. 8vo. 1l. 5s.

A Catalogue of the British Non-parasitical Worms in the Collection of the British Museum. By George Johnston, M.D., Edin., F.R.C.L., Ed., LL.D., Marischal Coll., Aberdeen, &c. Pp. 365. Woodcuts and 24 Plates. [With an Alphabetical Index.] 1865, 8vo. 7s.

Catalogue of the British Echinoderms in the British Museum (Natural History). By F. Jeffrey Bell, M.A. Pp. xvii., 202. Woodcuts and 16 Plates (2 Coloured). [With Table of Contents, Tables of Distribution, Alphabetical Index, Description of the Plates, &c.] 1892, 8vo. 12s. 6d.

List of the Specimens of British Animals in the Collection of the British Museum; with Synonyma and References to figures. 12mo.:—

Part V. Lepidoptera. By J. F. Stephens. 2nd Edition. Revised by H. T. Stainton and E. Shepherd. Pp. iv., 224. 1856. 1s. 9d.

Part VI. Hymenoptera. By F. Smith. Pp. 134. 1851. 2s.

Part VII. Mollusca, Acephala and Brachiopoda. By Dr. J. E. Gray. Pp. iv., 167. 1851. 3s. 6d.

Part VIII. Fish. By Adam White. Pp. xxiii., 164. (With Index and List of Donors.) 1851. 3s. 6d.

List of the Specimens of British Animals in the Collection of the British Museum—*continued*.

- Part XI. Anoplura, or Parasitic Insects. By H. Denny. Pp. iv., 51. 1852. 1s.
- Part XII. Lepidoptera (continued). By James F. Stephens. Pp. iv., 54. 1852. 9d.
- Part XIII. Nomenclature of Hymenoptera. By Frederick Smith. Pp. iv., 74. 1853. 1s. 4d.
- Part XIV. Nomenclature of Neuroptera. By Adam White. Pp. iv., 16. 1853. 6d.
- Part XV. Nomenclature of Diptera, I. By Adam White. Pp. iv., 42. 1853. 1s.
- Part XVI. Lepidoptera (completed). By H. T. Stainton. Pp. 199. [With an Index.] 1854. 3s.

PLANTS.

Illustrations of Australian Plants collected in 1770 during Captain Cook's Voyage round the World in H.M.S. "Endeavour." By the Right Hon. Sir Joseph Banks, Bart., K.B., P.R.S., and Dr. Daniel Solander, F.R.S. [Being a series of lithographic reproductions of copper-plates engraved after paintings by F. P. Nodder, James Miller, J. F. Miller, and John Cleveley.] With Introduction and Determinations by James Britten, F.L.S., Senior Assistant, Department of Botany, British Museum :—

Part I.—101 Plates, with 31 pages of descriptive text. 1900, fol. 17. 5s.

Part II.—142 Plates (pls. 101–243), with 41 pages of descriptive text (pp. 35–75). 1901, fol. 17. 15s.

Part III.—77 Plates (pls. 244–318, 45A, and 122), with 26 pages of descriptive text, including Index to the whole work (pp. 77–102), and 3 maps. 1905, fol. 17. 5s.

Catalogue of the African Plants collected by Dr. Friedrich Welwitsch in 1853–61 :—

Vol. I. Dicotyledons. By William Philip Hiern, M.A., F.L.S., &c. :—

Part I. [Ranunculaceæ to Rhizophoraceæ.] Pp. xxvi., 336. [With Portrait of Dr. Welwitsch. Introduction, Bibliography, and Index of Genera.] 1896, 8vo. 7s. 6d.

Part II. Combretaceæ to Rubiaceæ. Pp. 337–510. [With Index of Genera.] 1898, 8vo. 4s.

Part III. Dipsaceæ to Scrophulariaceæ. Pp. 511–784. [With Index of Genera.] 1898, 8vo. 5s.

Catalogue of the African Plants collected by Dr. Friedrich Welwitsch in 1853-61—*continued*.

Vol. I.—*continued*.

Part IV. Lentibulariaceæ to Ceratophylleæ. Pp. 785-1035. [With Index.] 1900, 8vo. 5s.

Vol. II. Monocotyledons, Gymnosperms, and Cryptogams :—

Part I. Monocotyledons and Gymnosperms. By Alfred Barton Rendle, M.A., D.Sc., F.L.S., Assistant, Department of Botany. Pp. 260. [With Index of Genera.] 1899, 8vo. 6s.

Part II. Cryptogamia. Pp. 261-566. [With Table of Errata, and General Index to the whole work.] 1901, 8vo. 6s.

Vascular Cryptogams	...	By William Carruthers, F.R.S.
Mosses	„ Antony Gepp, M.A., F.L.S.
Hepatics	„ F. Stephani.
Marine Algæ	„ Ethel S. Barton.
Freshwater Algæ	„ W. West, F.L.S., and G. S. West, B.A.
Diatomaceæ	„ Thomas Comber, F.L.S.
Lichenes	„ E. A. Wainio.
Fungi	„ Annie Lorrain Smith.
Mycetozoa	„ Arthur Lister, F.R.S.

Flora of Jamaica, containing descriptions of the Flowering Plants known from the Island. By William Fawcett, B.Sc., F.L.S., etc., and A. B. Rendle, M.A., D.Sc., F.R.S., F.L.S., etc. Vol. 1. Orchidaceæ. Pp. xx., 150 : 32 Plates. [With Index of Genera and Species.] 1910, 8vo. 10s. 6d.

Synopsis of the British Basidiomycetes : a Descriptive Catalogue of the Drawings and Specimens in the Department of Botany, British Museum. By Worthington George Smith, F.L.S. Pp. 531. 5 Plates and 145 Figures in Text. [With Index.] 1908, 8vo. 10s.

A Monograph of Lichens found in Britain : being a Descriptive Catalogue of the Species in the Herbarium of the British Museum :—

Part II. By Annie Lorrain Smith, F.L.S. Pp. [viii.,] 409 : 59 Plates. [With List of Plates, Glossary, and Index.] 1911, 8vo. 17.

A Monograph of the Mycetozoa : a Descriptive Catalogue of the Species in the Herbarium of the British Museum. By Arthur Lister, F.R.S., F.L.S. Second Edition, revised by Gulielma Lister, F.L.S. Pp. 302. 201 Plates (120 coloured). 56 Woodcuts. [With Indexes, Bibliography, Glossary, etc.] 1911, 8vo. 17. 10s.

List of British Diatomaceæ in the Collection of the British Museum. By the Rev. W. Smith, F.L.S., &c. Pp. iv., 55. 1859, 12mo. 1s.

FOSSILS.

Catalogue of the Fossil Mammalia in the British Museum (Natural History). By Richard Lydekker, B.A., F.G.S.:—

Part I. Containing the Orders Primates, Chiroptera, Insectivora, Carnivora, and Rodentia. Pp. xxx., 268. 33 Woodcuts. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 5s.

Part II. Containing the Order Ungulata, Suborder Artiodactyla. Pp. xxii., 324. 39 Woodcuts. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 6s.

Part III. Containing the Order Ungulata, Suborders Perissodactyla, Toxodontia, Condylarthra, and Amblypoda. Pp. xvi., 186. 30 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1886, 8vo. 4s.

Part IV. Containing the Order Ungulata, Suborder Proboscidea. Pp. xxiv., 235. 33 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1886, 8vo. 5s.

Part V. Containing the Group Tillodontia, the Orders Sirenia, Cetacea, Edentata, Marsupialia, Monotremata, and Supplement. Pp. xxxv., 345. 55 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1887, 8vo. 6s.

Catalogue of the Fossil Birds in the British Museum (Natural History). By Richard Lydekker, B.A. Pp. xxvii., 368. 75 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1891, 8vo. 10s. 6d.

Catalogue of the Fossil Reptilia and Amphibia in the British Museum (Natural History). By Richard Lydekker, B.A., F.G.S.:—

Part I. Containing the Orders Ornithosauria, Crocodilia, Dinosauria, Squamata, Rhynchocephalia, and Proterosauria. Pp. xxviii., 309. 69 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1888, 8vo. 7s. 6d.

Part II. Containing the Orders Ichthyopterygia and Sauropterygia. Pp. xxi., 307. 85 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1889, 8vo. 7s. 6d.

Part III. Containing the Order Chelonina. Pp. xviii., 239. 53 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species including Synonyms.] 1889, 8vo. 7s. 6d.

Part IV. Containing the Orders Anomodontia, Ecaudata, Caudata, and Labyrinthodontia; and Supplement.

Catalogue of the Fossil Reptilia and Amphibia in the British Museum—*continued*.

Pp. xxiii., 295. 66 Woodcuts. [With Systematic Index, Alphabetical Index of Genera and Species, including Synonyms, and Alphabetical Index of Genera and Species to the entire work.] 1890, 8vo. 7s. 6d.

A descriptive Catalogue of the Marine Reptiles of the Oxford Clay. Based on the Leeds Collection in the British Museum (Natural History), London. Part I. By C. W. Andrews, D.Sc., F.R.S. Pp. xxiii., 205: 94 Text-figures, 11 Plates. [With Systematic and Alphabetical Indexes, List of Illustrations, Explanations of Plates, &c.] 1910, 4to. 1l. 5s.

Catalogue of the Fossil Fishes in the British Museum (Natural History). By Arthur Smith Woodward, LL.D., F.R.S., F.G.S., &c. :—

Part I. Containing the Elasmobranchii. Pp. xlvii., 474. 13 Woodcuts and 17 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1889, 8vo. 1l. 1s.

Part II. Containing the Elasmobranchii (Acanthodii), Holocephali, Ichthyodorulites, Ostracodermi, Dipnoi, and Teleostomi (Crossopterygii and Chondrosteian Actinopterygii). Pp. xlv., 567. 58 Woodcuts and 16 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1891, 8vo. 1l. 1s.

Part III. Containing the Actinopterygian Teleostomi of the Orders Chondrostei (concluded), Protospondyli, Aetheospondyli, and Isospondyli (in part). Pp. xlii., 544. 45 Woodcuts and 18 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1895, 8vo. 1l. 1s.

Part IV. Containing the Actinopterygian Teleostomi of the Suborders Isospondyli (in part), Ostariophysii, Apodes, Percesoces, Hemibranchii, Acanthopterygii, and Anacanthini. Pp. xxxix., 636. 22 Woodcuts and 19 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1901, 8vo. 1l. 1s.

A descriptive Catalogue of the Tertiary Vertebrata of the Fayûm, Egypt. Based on the Collection of the Egyptian Government in the Geological Museum, Cairo, and on the Collection in the British Museum (Natural History), London. By C. W. Andrews, D.Sc. Pp. xxxvii., 324: 98 Text Figures and 26 Plates. [With Systematic and Alphabetical Indexes.] 1906, 4to. 1l. 15s.

Systematic List of the Edwards Collection of British Oligocene and Eocene Mollusca in the British Museum (Natural

History), with references to the type-specimens from similar horizons contained in other collections belonging to the Geological Department of the Museum. By Richard Bullen Newton, F.G.S. Pp. xxviii., 365. [With table of Families and Genera, Bibliography, Correlation-table, Appendix, and Alphabetical Index.] 1891, 8vo. 6s.

Catalogue of Tertiary Mollusca in the Department of Geology, British Museum (Natural History). Part I. The Australasian Tertiary Mollusca. By George F. Harris, F.G.S., &c. Pp. xxvi., 407. 8 Plates. [With Table of Families, Genera, and Sub-Genera, and Index.] 1897, 8vo. 10s.

Catalogue of the Fossil Cephalopoda in the British Museum (Natural History):—

Part I. Containing part of the Suborder Nautiloidea, consisting of the families Orthoceratidæ, Endoceratidæ, Actinoceratidæ, Gomphoceratidæ, Ascoceratidæ, Poterioceratidæ, Cyrtoceratidæ, and Supplement. By Arthur H. Foord, F.G.S. Pp. xxxi., 344. 51 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1888, 8vo. 10s. 6d.

Part II. Containing the remainder of the Suborder Nautiloidea, consisting of the families Lituitidæ, Trochoceratidæ, Nautilidæ, and Supplement. By Arthur H. Foord, F.G.S. Pp. xxviii., 407. 86 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1891, 8vo. 15s.

Part III. Containing the Bactritidæ, and part of the Suborder Ammonoidea. By Arthur H. Foord, Ph.D., F.G.S., and George Charles Crick, A.R.S.M., F.G.S. Pp. xxxiii., 303. 146 Woodcuts. [With Systematic Index of Genera and Species, and Alphabetical Index.] 1897, 8vo. 12s. 6d.

List of the Types and Figured Specimens of Fossil Cephalopoda in the British Museum (Natural History). By G. C. Crick, F.G.S. Pp. 103. [With Index.] 1898, 8vo. 2s. 6d.

A Catalogue of British Fossil Crustacea, with their Synonyms and the Range in Time of each Genus and Order. By Henry Woodward, F.R.S. Pp. xii., 155. [With an Alphabetical Index.] 1877, 8vo. 5s.

Catalogue of the Fossil Bryozoa in the Department of Geology, British Museum (Natural History):—

The Jurassic Bryozoa. By J. W. Gregory, D.Sc., F.G.S., F.Z.S. Pp. [viii.,] 239 : 22 Woodcuts and 11 Plates. [With List of Species and Distribution, Bibliography, Index, and Explanation of Plates.] 1896, 8vo. 10s.

Catalogue of the Fossil Bryozoa in the British Museum—*cont.*

The Cretaceous Bryozoa. By J. W. Gregory, D.Sc., F.R.S., &c. :—

Vol. I. Pp. xiv., 457 : 64 Woodcuts and 17 Plates.
[With Index and Explanation of Plates.] 1899,
8vo. 16s.

Vol. II. Pp. xlviii., 346. 75 Woodcuts and 9 Plates.
[With List of Localities, Bibliography, Subject
and Systematic Indexes, and Explanation of
Plates.] 1909, 8vo. 13s.

Catalogue of the Blastoidea in the Geological Department of the British Museum (Natural History), with an account of the morphology and systematic position of the group, and a revision of the genera and species. By Robert Etheridge, jun., of the Department of Geology, British Museum (Natural History), and P. Herbert Carpenter, D.Sc., F.R.S., F.L.S. (of Eton College). Pp. xv., 322. 20 Plates. [With Preface by Dr. H. Woodward, Table of Contents, General Index, Explanations of the Plates, &c.] 1886, 4to. 1*l.* 5s.

The Genera and Species of Blastoidea, with a List of the Specimens in the British Museum (Natural History). By F. A. Bather, M.A., F.G.S., of the Geological Department. Pp. x., 70. 1 Woodcut. 1899, 8vo. 3s.

Catalogue of the Palæozoic Plants in the Department of Geology and Palæontology, British Museum (Natural History). By Robert Kidston, F.G.S. Pp. viii., 288. [With a list of works quoted, and an Index.] 1886, 8vo. 5s.

Catalogue of the Mesozoic Plants in the Department of Geology, British Museum (Natural History). By A. C. Seward, M.A., F.R.S., F.G.S., University Lecturer in Botany and Fellow of Emanuel College, Cambridge :—

Part I. The Wealden Flora. Part I. Thallophyta—Pteridophyta. Pp. xxxviii., 179. 17 Woodcuts and 11 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1894, 8vo. 10s.

Part II. The Wealden Flora. Part II. Gymnospermæ. Pp. viii., 259. 9 Woodcuts and 20 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1895, 8vo. 15s.

Part III. The Jurassic Flora. Part I. The Yorkshire Coast. Pp. xii., 341. 53 Woodcuts and 21 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1900, 8vo. 1*l.*

Catalogue of the Mesozoic Plants in the Department of Geology, British Museum—*continued*.

Part IV. The Jurassic Flora. II.—Liassic and Oolitic Floras of England (excluding the Inferior Oolite Plants of the Yorkshire Coast). Pp. xv., 192. 20 Woodcuts and 13 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1904, 8vo. 10s.

Catalogue of the Fossil Plants of the Glossopteris Flora in the Department of Geology, British Museum (Natural History). Being a Monograph of the Permo-carboniferous Flora of India and the Southern Hemisphere. By E. A. Newell Arber, M.A., F.L.S., F.G.S. Pp. lxxiv., 255: 51 Text-Figures and 8 Plates. [With Bibliography and Alphabetical Index.] 1905, 8vo. 12s. 6d.

GUIDE-BOOKS, ETC.

A General Guide to the British Museum (Natural History), Cromwell Road, London, S.W. Twelfth Edition. With 59 woodcuts, 2 plans, 2 views of the building, and an illustrated cover. Pp. x., 117. 1909, 8vo. 3d.

Guide to the Specimens illustrating the Races of Mankind (Anthropology), exhibited in the Department of Zoology, British Museum (Natural History). [By R. Lydekker, F.R.S.] Illustrated by 16 Figures. Pp. 31. 1908, 8vo. 4d.

Guide to the Galleries of Mammals (other than Ungulates) in the Department of Zoology of the British Museum (Natural History). Eighth Edition. Pp. 101. 52 Woodcuts and 4 plans. Index. 1906, 8vo. 6d.

Guide to the Great Game Animals (Ungulata) in the Department of Zoology, British Museum (Natural History). Pp. 93. 53 Text and other figures. With list of Horns, Antlers and Tusks, and Index. 1907, 8vo. 1s.

Guide to the Elephants (Recent and Fossil) exhibited in the Department of Geology and Palæontology in the British Museum (Natural History). [By Dr. C. W. Andrews, F.R.S.] Illustrated by 31 text-figures. Pp. 46. 1908, 8vo. 6d.

Guide to the Specimens of the Horse Family (Equidæ) exhibited in the Department of Zoology, British Museum (Natural History). [By R. Lydekker, F.R.S.] Pp. 42. 26 Figures. 1907, 8vo. 1s.

Guide to the Domesticated Animals (other than Horses) exhibited in the Central and North Halls of the British Museum (Natural History). [By R. Lydekker, F.R.S.] Illustrated by 24 Figures. Pp. 55. [With table of Contents, List of Illustrations, and Index.] 1908, 8vo. 6d.

- Guide to the Whales, Porpoises, and Dolphins (order Cetacea) exhibited in the Department of Zoology, British Museum (Natural History). [By R. Lydekker, F.R.S.] Illustrated by 33 Figures. Pp. 47. [With Index.] 1909, 8vo. 4*d*.
- Guide to the Gallery of Birds in the Department of Zoology, British Museum (Natural History). [By W. R. Ogilvie Grant.] Second Edition. Pp. iv., 228. 25 Plates, and 7 Illustrations in text. [With Index.] 1910, 4to. 2*s*. 6*d*.
- Guide to the Gallery of Birds in the Department of Zoology, British Museum (Natural History). [By W. R. Ogilvie Grant.] :—
 Part I. General Series. Pp. 149. [With Index.] 1905, 4to. 6*d*.
 Part II. Nesting Series of British Birds. Second Edition. Pp. 62. 4 Plates. [Index.] 1909, 4to. 4*d*.
- Guide to the Gallery of Reptilia and Amphibia in the Department of Zoology of the British Museum (Natural History). [By R. Lydekker, F.R.S.] Illustrated by 76 text and other Figures. Pp. iv., 75. [With Table of Contents.] 1906, 8vo. 6*d*.
- Guide to the Gallery of Fishes in the Department of Zoology of the British Museum (Natural History). [By Dr. W. G. Ridewood.] Illustrated by 96 Figures. Pp. v., 209. [With Preface by Sir E. Ray Lankester, Table of Classification, and Index.] 1908, 8vo. 1*s*.
- Guide to the British Vertebrates Exhibited in the Department of Zoology, British Museum (Natural History). [By W. P. Pycraft.] Pp. iv., 122. 26 Text-Figures, 1 Plan. [With Index.] 1910, 8vo. 1*s*.
- Guide to the exhibited series of Insects in the Department of Zoology, British Museum (Natural History). By C. O. Waterhouse. Second Edition. Pp. 65 : 62 text- and full-page Illustrations. [With Table of Contents and Index.] 1909, 8vo. 1*s*.
- Guide to the Crustacea, Arachnida, Onychophora and Myriopoda exhibited in the Department of Zoology, British Museum (Natural History). (By W. T. Calman, D.Sc., A. S. Hirst, and F. J. Bell.) Pp. 133 : 90 Text-Figures. [With Table of Contents and Index.] 1910, 8vo. 1*s*.
- Guide to the Shell and Starfish Galleries (Mollusca, Polyzoa, Brachiopoda, Tunicata, Echinoderma, and Worms). Department of Zoology, British Museum (Natural History). Fifth Edition. Pp. iv., 133. 125 Woodcuts, Plan and Indexes. 1908, 8vo. 6*d*.
- Guide to the Coral Gallery (Protozoa, Porifera or Sponges, Hydrozoa, and Anthozoa) in the Department of Zoology, British Museum (Natural History). Second Edition. Pp. [iv., 8] 73. 90 Illustrations, Plan and Index. 1907, 8vo. 1*s*.

- A Guide to the Fossil Mammals and Birds in the Department of Geology and Palæontology in the British Museum (Natural History). Ninth Edition. [By A. S. Woodward, LL.D., F.R.S.] Pp. xvi., 100. 6 Plates, 88 Text-Figures. [With List of Illustrations, Table of Stratified Rocks, and Index.] 1909, 8vo. 6*d*.
- A Guide to the Fossil Reptiles, Amphibians, and Fishes in the Department of Geology and Palæontology in the British Museum (Natural History). Ninth Edition. [By A. S. Woodward, LL.D., F.R.S.] Pp. xviii., 110. 8 Plates and 116 Text-Figures. [With Table of Contents, Lists of Illustrations, Geological Time-Scale, and Index.] 1910, 8vo. 9*d*.
- A Guide to the Fossil Invertebrate Animals in the Department of Geology and Palæontology in the British Museum (Natural History). [By F. A. Bather, D.Sc., F.R.S.] Second Edition. Pp. x., 183. 7 Plates and 96 Text-Figures. [With List of Illustrations, Geological Time-scale, and Index.] 1911, 8vo. 1*s*.
- List of British Seed-plants and Ferns exhibited in the Department of Botany, British Museum (Natural History). [By A. B. Rendle, D.Sc., F.R.S., and J. Britten, F.L.S.] With table of Sequence of Orders, and Index of Genera. Pp. 44. 1907, 8vo. 4*d*.
- Guide to Sowerby's Models of British Fungi in the Department of Botany, British Museum (Natural History). Second Edition, revised. By Worthington G. Smith, F.L.S. Pp. 85. 91 Woodcuts. With Table of Diagnostic Characters, Glossary, and Index. 1908, 8vo. 4*d*.
- *Guide to Mr. Worthington Smith's Drawings of Field and Cultivated Mushrooms, and Poisonous or Worthless Fungi, often mistaken for Mushrooms, exhibited in the Department of Botany, British Museum (Natural History). Pp. 24: 2 Plates, containing 28 coloured figures; 4 text-Figures. 1910, 8vo., 1*s*.
- Guide to the British Mycetozoa exhibited in the Department of Botany, British Museum (Natural History). [By Arthur Lister, F.R.S.] Third Edition, revised. Pp. 49. 46 Woodcuts. Index. 1909, 8vo. 3*d*.
- A Guide to the Mineral Gallery of the British Museum (Natural History). Eleventh Edition. Pp. 32. Plan. 1911, 8vo. 1*d*.
- The Student's Index to the Collection of Minerals, British Museum (Natural History). Twenty-fourth Edition. Pp. 36. With a Plan of the Mineral Gallery. 1911, 8vo. 2*d*.

* The plates may be had separately in one sheet mounted on linen and varnished. Price 1*s*., or 1*s*. 2*d*. post free.

An Introduction to the Study of Minerals, with a Guide to the Mineral Gallery of the British Museum (Natural History). By L. Fletcher, M.A., F.R.S. Thirteenth Edition. Pp. 123. 41 Woodcuts. With Plan of the Mineral Gallery and Index. 1910, 8vo. 6*d*.

An Introduction to the Study of Rocks and Guide to the Museum Collection. Fourth Edition. By L. Fletcher, M.A., F.R.S. Pp. 155. [With Plan of the Mineral Gallery, Table of Contents, and Index.] 1909, 8vo. 1*s*.

An Introduction to the Study of Meteorites, with a List of the Meteorites represented in the Collection. By L. Fletcher, M.A., F.R.S., &c. Tenth Edition. Pp. 120. [With a Plan of the Mineral Gallery, and an Index to the Meteorites represented in the Collection.] 1908, 8vo. 6*d*.

SPECIAL GUIDES.

No. 2.—Books and Portraits illustrating the History of Plant Classification exhibited in the Department of Botany. Second Edition. [By A. B. Rendle, M.A., D.Sc., F.R.S.] Pp. 19. 4 Plates. 1909, 8vo. 4*d*.

No. 3.—Memorials of Linnæus: a collection of Portraits, Manuscripts, Specimens, and Books exhibited to commemorate the Bicentenary of his Birth. [By A. B. Rendle, M.A., D.Sc.] Pp. 16. 2 Plates. 1907, 8vo. 3*d*.

No. 4.—Memorials of Charles Darwin: a Collection of Manuscripts, Portraits, Medals, Books, and Natural History Specimens to commemorate the Centenary of his Birth and the Fiftieth Anniversary of the Publication of "The Origin of Species." (Second Edition.) [By W. G. Ride-wood, D.Sc.] Pp. vi., 50. 2 Plates. 1910, 8vo. 6*d*.

No. 5.—Guide to the Exhibition of Animals, Plants, and Minerals mentioned in the Bible. Second Edition. Pp. vii., 78. 7 Text-figures. 1911, 8vo. 6*d*.

INSTRUCTIONS FOR COLLECTORS.

Handbook of Instructions for Collectors, issued by the British Museum (Natural History). With Illustrations. Third Edition. Pp. 144. Index. 1906, 8vo. 1*s*. 6*d*.

Instructions for Collectors:—

No. 1.—Mammals. Fourth Edition. Pp. 8. Text illust. 1912, 8vo. 3*d*.

No. 2.—Birds. Fourth Edition. Pp. 10. 5 figures in text. 1908, 8vo. 3*d*.

No. 3.—Reptiles, Batrachinians, and Fishes. [Third Edition.] Pp. 12. 1903, 8vo. 4*d*.

No. 4.—Insects. Fifth Edition. Pp. 11. Text illust. 1911, 8vo. 3*d*.

No. 5.—Diptera (Two-winged Flies). Third Edition.
Pp. 16. Text illust. 1908, 8vo. 3*d*.

No. 6.—Mosquitoes (Culicidæ). [Third Edition.] Pp. 8.
1 Plate, 1 figure in text. 1904, 8vo. 3*d*.

No. 7.—Blood-sucking Flies, Ticks, &c. By E. E. Austen.
Third Edition. Pp. 24 : 13 figures in text. 1907, 8vo. 3*d*.

No. 8.—Spiders, Centipedes, &c. Second Edition. Pp. 4.
1906, 8vo. 3*d*.

No. 9.—Soft-bodied and other Invertebrate Animals; Shells
of Molluscs. Third Edition. Pp. 18. 1909, 8vo. 3*d*.

No. 10.—Plants. Fourth Edition. Pp. 10 : 3 figures in text.
1909, 8vo. 3*d*.

No. 11.—Fossils and Minerals. Third Edition. Pp. 8.
1906, 8vo. 3*d*.
